**The Three Leaps of Wang Lun** Alfred Döblin 2015-01-13 In 1915, fourteen years before Berlin Alexanderplatz, Alfred Döblin published his first novel, an extensively researched Chinese historical extravaganza: The Three Leaps of Wang Lun. Even more remarkably, given its subject matter, the book was written in Expressionist style and is now considered the first modern German novel, as well as the first Western novel to depict a China untouched by the West. It is virtually unknown in English. Based on actual accounts of a doomed rebellion during the reign of Emperor Qianlong in the late 18th century, the novel tells the story of Wang Lun, a historical martial arts master and charismatic leader of the White Lotus sect, who leads a futile revolt of the "Truly Powerless." Densely packed cities and Tibetan wastes, political intrigue and religious yearning, imperial court life and the fate of wandering outcasts are depicted in a language of enormous vigor and matchless imagination, unfolding the theme of timidity against force, and a mystical sense of the world against the realities of power.

**Basics of Virtual Reality** Armin Grasnick 2022-03-03 Today, the reality we know can be recorded and reproduced true to reality using technical processes. Space and time are recreated virtually as a copy in artificial reality. However, the reproduction of virtual reality is not limited to a mere copy of what exists. A visitor to the virtual space does not have to be content with the pixelated image of the old familiar, but can encounter unreal phenomena in the illusory world that never existed in real life or are even physically impossible. This enables an expansion of the recorded reality and allows the perception of surprisingly new perspectives. A perspective denotes the perception of a fact from a certain point of view and corresponds to the way of looking at things. But a perspective is also the observation of a scene from a viewing position. From different perspectives the illusion of reality arises during the reproduction by observation. This vision is not based on imagination or

hallucination, but is the basic function of virtual reality. This book describes the concepts, systems, and technologies used to create virtual reality from its ancient beginnings to the present, and provides a glimpse into a possible future. This book is a translation of the original German 1st edition *Grundlagen der virtuellen Realität* by Armin Grasnack, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Artificial Intelligence in Marketing IntroBooks Team Artificial intelligence in marketing, which is commonly known as AI Marketing, is a process of striking a chord of linkage between customer statistics and artificial intelligence hypotheses. It is basically an automated learning curve for a business house on the marketing front such that it can predict a customer's ongoing move and the next phase of action. By doing so, a business entity can easily amplify its outlook in the interests of the customer, which, in turn, displays the quality of relevant products or services in an intelligent manner to reach a larger audience. Due to the emergence of artificial intelligence marketing solutions, an effective recourse is seen apparent in terms of bonding between scientific data points, which are amassed industriously for subsequent implementation. In other words, the erstwhile process of manual hard work of assembling and analyzing a colossal quantum of data has surely become a thing of the past.

Single Neuron Studies of the Human Brain Itzhak Fried 2014-05-30 Foundational studies of the activities of spiking neurons in the awake and behaving human brain and the insights they yield into cognitive and clinical phenomena. In the

last decade, the synergistic interaction of neurosurgeons, engineers, and neuroscientists, combined with new technologies, has enabled scientists to study the awake, behaving human brain directly. These developments allow cognitive processes to be characterized at unprecedented resolution: single neuron activity. Direct observation of the human brain has already led to major insights into such aspects of brain function as perception, language, sleep, learning, memory, action, imagery, volition, and consciousness. In this volume, experts document the successes, challenges, and opportunity in an emerging field. The book presents methodological tutorials, with chapters on such topics as the surgical implantation of electrodes and data analysis techniques; describes novel insights into cognitive functions including memory, decision making, and visual imagery; and discusses insights into diseases such as epilepsy and movement disorders gained from examining single neuron activity. Finally, contributors consider future challenges, questions that are ripe for investigation, and exciting avenues for translational efforts. Contributors Ralph Adolphs, William S. Anderson, Arjun K. *Father and Son* E. O. Plauen 2017-05-09 *Father and Son* is one of the most beloved comic strips ever drawn—an uproarious, timeless ode to the pleasures, pitfalls, and endless absurdity of family life. *Father and Son* is a slyly heartwarming, dizzyingly inventive classic in the tradition of *Calvin and Hobbes* and *The Simpsons*. Created in 1934 by the German political cartoonist Erich Ohser (using the pseudonym E.O. Plauen after being blacklisted for his opposition to the Nazi regime), the gruff, loving, mustachioed father and his sweet but troublemaking son embark on adventures both everyday and extraordinary: family photoshoots and summer vacations, shipwrecks and battles with gangsters, a Christmas feast with forest animals and a trip to the zoo. Drawn almost entirely without dialogue, the strips overflow with slapstick, fantasy, and anarchic visual puns. *Father and Son* remains an uproarious, timeless ode to the pleasures, pitfalls, and endless absurdity of family life. This NYRC edition is an extra-wide hardcover with raised cover image, and features new English hand-lettering.

*Contrast Sensitivity of the Human Eye and Its Effects on Image Quality* Peter G. J. Barten 1999 This book examines the contrast sensitivity of the human visual system - concerning the eye's ability to distinguish objects from each other or from the background - and its effects on the imageforming process. The text provides equations for determining various aspects of contrast sensitivity, in

addition to models that easily can be used for practical applications.

Dearest of Geniuses Sandra L. Katz 2003 Dearest of Geniuses is the first definitive biography of one of America's first successful female architects, Theodate Pope Riddle (1867-1946). In addition to designing schools and private homes in Connecticut and New York, Theodate designed and supervised the reconstruction of President Theodore Roosevelt's Birthplace in New York City. Theodate's masterpiece is the unusual medieval campus of Connecticut's Avon Old Farms School, where she served as founder and pioneered a progressive curriculum far ahead of its time. The school continues to flourish today and receives ongoing acclaim as an architectural tour de force and as an innovative educational institution. According to writer and critic Brendan Gill, Theodate Pope Riddle was one of the ten most distinguished American women of the 20th century. Her friend, famed psychologist Carl Jung, saw her as an "intuitive" woman who trusted her instincts, ignored raised eyebrows, and courageously forged ahead despite the restrictions of her day. Using Theodate's extensive correspondence, girlhood diaries, journals, memoirs, transcripts of seances, and sittings with mediums, as well as interviews, family letters, and other sources, author Sandra L. Katz re-creates the life of this extraordinary woman.

In this book you will experience mathematics from the visual point of view, discovering fascinating and never previously published images that offer illustrative examples to the above questions. Every picture is accompanied by a brief explanatory text, references to further reading, and a number of web links where you can obtain further information. The Rage Julia Ebner 2017-09-30 The early twenty-first century has been defined by a rise in Islamist radicalisation and a concurrent rise in far right extremism. This book explores the interaction between the 'new' far right and Islamist extremists and considers the consequences for the global terror threat. Julia Ebner argues that far right and Islamist extremist narratives -

'The West is at war with Islam' and 'Muslims are at war with the West' - complement each other perfectly, making the two extremes rhetorical allies and building a spiralling torrent of hatred - 'The Rage'. By looking at extremist movements both online and offline, she shows how far right and Islamist extremists have succeeded in penetrating each other's echo chambers as a result of their mutually useful messages. Based on first-hand interviews, this book introduces readers to the world of reciprocal radicalisation and the hotbeds of extremism that have developed - with potentially disastrous consequences - in the UK, Europe and the US.

**Making up the Mind** Chris Frith 2013-05-20 Written by one of the world's leading neuroscientists, Making Up the Mind is the first accessible account of experimental studies showing how the brain creates our mental world. Uses evidence from brain imaging, psychological experiments and studies of patients to explore the relationship between the mind and the brain. Demonstrates that our knowledge of both the mental and physical comes to us through models created by our brain. Shows how the brain makes communication of ideas from one mind to another possible.

**Destiny's Journey** Alfred Döblin 2019-08-16 Destiny's Journey is a memoir reconstructed partly from notebooks that Döblin kept from the time he worked in the French Ministry of Information in the spring of 1940 and partly written without notes in Los Angeles where he took refuge during the Second World War. It tells the personal and generational story of the flight of Jewish and anti-Nazi intellectuals from Europe to America, their fear and frustration, isolation, and inability to work. Döblin's story differs from that of other Jewish intellectuals and artists in that his family converts to Catholicism in Los Angeles. Unlike most of them, he returns to Europe as an officer with the French forces and works on denazifying German literature. The conversion narrative bridges the departure from and return to Europe. To critic John Simon, "the latter part of the book often reads like a shrill piece of Christian homiletics. But even this is not without interest, as it traces the transformation of an anarchic outsider into a dogmatic insider." "The first part of 'Destiny's Journey' [about] Döblin's departure from Paris [in] 1940... is magisterial: acidly observed, saturated in telling detail, grimly comic and harrowing... with an exemplary introduction by Peter Demetz... an important, nourishing book" – John Simon, The New York Times

Swansong 1945: A Collective Diary of the Last Days of the Third Reich Walter Kempowski 2015-04-13 A monumental work of history that captures the last days of the Third Reich as never before. Swansong 1945 chronicles the end of Nazi Germany through more than 1,000 extracts from letters, diaries, and autobiographical accounts, written by civilians and soldiers alike. Together, they present a panoramic view of four tumultuous days that fateful spring: Hitler's birthday on April 20, American and Soviet troops meeting at the Elbe on April 25, Hitler's suicide on April 30, and the German surrender on May 8. An extraordinary account of suffering and survival, Swansong 1945 brings to vivid life the end of World War II in Europe.

**Survivor** Sam Pivnik 2013-06-18 Now in his eighties, Sam Pivnik tells for the first time the extraordinary story of how he survived the Holocaust Sam Pivnik is the ultimate survivor from a world that no longer exists. On fourteen occasions he should have been killed, but luck, his physical strength, and his determination not to die all played a part in Sam Pivnik living to tell his extraordinary story. In 1939, on his thirteenth birthday, Pivnik's life changed forever when the Nazis invaded Poland. He survived the two ghettos set up in his home town of Bedzin and six months on Auschwitz's notorious Rampe Kommando where prisoners were either taken away for entry to the camp or gassing. After this harrowing experience he was sent to work at the brutal Fürstengrube mining camp. He could have died on the 'Death March' that took him west as the Third Reich collapsed and he was one of only a handful of people who swam to safety when the Royal Air Force sank the prison ship Cap Arcona in 1945, mistakenly believing it to be carrying fleeing members of the SS. He eventually made his way to London where he found people too preoccupied with their own wartime experiences on the Home Front to be interested in what had happened to him. Now in his eighties, Sam Pivnik tells for the first time the story of his life, a true tale of survival against the most extraordinary odds.

I am Not a Brain Markus Gabriel 2019-09-03 Many consider the nature of human consciousness to be one of the last great unsolved mysteries. Why should the light turn on, so to speak, in human beings at all? And how is the electrical storm of neurons under our skull connected with our consciousness? Is the self only our brain's user interface, a kind of stage on which a show is performed that we cannot freely direct? In this book, philosopher Markus Gabriel challenges an increasing trend in the sciences towards neurocentrism, a notion which rests on the assumption that the self is identical to the brain. Gabriel raises serious doubts as to whether we can know ourselves in this way. In a sharp critique of this approach, he presents a new defense of the free will and provides a timely introduction to philosophical thought about the self – all with verve, humor, and surprising insights. Gabriel criticizes the scientific image of the world and takes us on an eclectic journey of self-reflection by way of such concepts as self, consciousness, and freedom, with the aid of Kant, Schopenhauer, and Nagel but also Dr. Who, The Walking Dead, and Fargo.

Essays on Mind Donald O. Hebb 2014-03-18 Donald Olding Hebb, referred to by American Psychologist as one of "the 20th century's most eminent and influential theorists in the realm of brain function and behavior," contributes greatly to the understanding of mind and thought in *Essays on Mind*. His objective was to learn about thought which he considered "the central problem of psychology -- but also, not less important, to learn how to think clearly about thought, which is philosophy." The volume is written for advanced undergraduates, graduates, professionals, and lay people interested in or studying the mind. Hebb offers an increased understanding of the mind from a biological perspective that affects long-standing philosophical and psychological problems. "Psychology and Philosophy were divorced some time ago but, like other divorced couples, they still have problems in common," writes Hebb. The first three chapters establish the methodological and philosophical

basis for his biologically centered theory of behavior, including the evolution of the mind, nature versus nurture, the origination and status of cell-assembly theory, and infant thought and language development. He concludes with a discussion of the workings of scientific thought from a practical rather than theoretical perspective.

**Quantum Physics for Hippies** James Douglas 2019-04-04 "Entertaining, insightful and simply brilliant. *Quantum Physics for Hippies* shatters your perception of reality." - Dr. Mark Müller Bob, a spiritual hippie, meets the witty nerd Alice, who day-dreams about quantum physics all day long. This chance meeting starts them on a mind-blowing journey into the nature of reality that will change their lives forever. Written by quantum physicists and beautifully illustrated, *Quantum Physics for Hippies* takes the bizarre world of quantum physics and makes it understandable for everyone, hippies and nerds alike. Is this book for you? If you would love to know what quantum physics is really about, but complicated explanations or equations put you off, then this book is for you. Why? We found that there are two types of books about quantum physics. Type A is written by nerds. Usually, they have hundreds of pages, a lot of

equations and bury you in useless details. They are mostly correct, but not fun to read. Type B is written by esoterics. They are easy to read, but often full of nonsense, not helping at all in your mission to find the truth. So we decided to write a new type of quantum physics book. Type Hippy-Nerd! Easy, fun to read and correct all at the same time, while still blowing your mind. Happy Readings!

**Vibrations** Balakumar Balachandran 2018-11-01 This new edition explains how vibrations can be used in a broad spectrum of applications and how to meet the challenges faced by engineers and system designers. The text integrates linear and nonlinear systems and covers the time domain and the frequency domain, responses to harmonic and transient excitations, and discrete and continuous system models. It focuses on modeling, analysis, prediction, and measurement to provide a complete understanding of the underlying physical vibratory phenomena and their relevance for engineering design. Knowledge is put into practice through numerous examples with real-world applications in a range of disciplines, detailed design guidelines applicable to various vibratory systems, and over forty online interactive graphics provide a visual summary of system behaviors and enable students to carry out their own parametric studies. Some thirteen new tables act as a quick reference for self-study, detailing key characteristics of physical systems and summarizing important results. This is an essential text for undergraduate and graduate courses in vibration analysis, and a valuable reference for practicing engineers.

**Silent Stars** Jeanine Basinger 2012-10-17 From one of America's most renowned film scholars: a revelatory, perceptive, and highly readable look at the greatest silent film stars -- not those few who are fully appreciated and understood, like Chaplin, Keaton, Gish, and Garbo, but those who have been misperceived, unfairly dismissed, or forgotten. Here is Valentino, "the Sheik," who was hardly the effeminate lounge lizard he's been branded as; Mary Pickford, who couldn't have been further from the adorable little creature with golden ringlets that was her film persona; Marion Davies, unfairly pilloried in *Citizen Kane*; the original "Phantom" and "Hunchback," Lon Chaney; the beautiful Talmadge sisters, Norma and Constance. Here are the great divas, Pola Negri and Gloria Swanson; the great flappers, Colleen Moore and Clara Bow; the great cowboys, William S. Hart and Tom Mix; and the great lover, John Gilbert. Here, too, is the quintessential slapstick comedienne, Mabel Normand, with her Keystone Kops; the quintessential all-American hero, Douglas Fairbanks; and, of course, the quintessential all-American dog, Rin-Tin-Tin. This is the first book to anatomize the major silent players, reconstruct their careers, and give us a sense of what those films, those stars, and that Hollywood were all about. An absolutely essential text for anyone seriously interested in movies, and, with more than three hundred photographs, as much a treat to look at as it is to read.
