**Report to Congress on Out-of-wedlock Childbearing** National Center for Health Statistics (U.S.) 1995 This report summarizes the current status and trends in nonmarital childbearing in the United States, and presents a series of supplemental papers by experts from social science disciplines. "Nonmarital Childbearing in the United States" (Kristin A. Moore) introduces the topic, indicating that nearly a third of all births in the country occurred outside of marriage in 1993. However, Americans are not having more babies; they are having fewer marriages. "The Demography of Out-of-Wedlock Childbearing" (Stephanie J. Ventura, Christine A. Bachrach, Laura Hill, Kelleen Kaye, Pamela Holcomb, and Elisa Koff) provides the statistics that support the discussion. The following expert papers provide commentary on aspects of the situation: (1) "The Retreat from Marriage and the Rise in Nonmarital Fertility" (Daniel T. Lichter); (2) "Family Structure and Nonmarital Fertility: Perspectives from Ethnographic Research" (Linda M. Burton); (3) "The Effect of the Welfare System on Nonmarital Childbearing" (Robert A. Moffitt); (4) "How Nonmarital Childbearing Is Affected by Neighborhoods, Marital Opportunities and Labor-Market Conditions" (Greg J. Duncan); (5) "Access to and Utilization of Preventative Services: Implications for Nonmarital Childbearing" (Martha R. Burt); (6) "Attitudes, Values, and Norms Related to Nonmarital

Fertility" (Arland Thornton); (7) "Risk Factors for Adolescent Nonmarital Childbearing" (Brent C. Miller); (8) "The Consequences of Nonmarital Childbearing for Women, Children, and Society" (Sara S. McLanahan); and (9) "Strategies To Reduce Nonmarital Childbearing" (Theodora Doms). Appendixes present data tables and tables of fertility ratios. (Contains 68 figures, 58 references, 28 appendix tables, 4 tables, and 1 chart in the expert papers.) (SLD)

*Achieving the Paris Climate Agreement Goals* Sven Teske 2019-02-01 This open access book presents detailed pathways to achieve 100% renewable energy by 2050, globally and across ten geographical regions. Based on state-of-the-art scenario modelling, it provides the vital missing link between renewable energy targets and the measures needed to achieve them. Bringing together the latest research in climate science, renewable energy technology, employment and resource impacts, the book breaks new ground by covering all the elements essential to achieving the ambitious climate mitigation targets set out in the Paris Climate Agreement. For example, sectoral implementation pathways, with special emphasis on differences between developed and developing countries and regional conditions, provide tools to implement the scenarios globally and domestically. Non-energy greenhouse gas mitigation scenarios define a sustainable pathway for land-use change and the agricultural sector. Furthermore, results of the impact of the scenarios on employment and mineral and resource requirements provide vital insight on economic and resource management implications. The book clearly demonstrates that the goals of the Paris Agreement are achievable and feasible with current technology and are beneficial in economic and employment terms. It is essential reading for anyone with responsibility for implementing renewable energy or climate targets internationally or domestically, including climate policy negotiators, policy-makers at all levels of government, businesses with renewable energy commitments, researchers and the renewable energy industry.

Adipose Tissue Biology Michael E. Symonds 2018-07-21 The past decade has seen an exponential increase in our knowledge and understanding of adipose tissue biology. This has coincided with the continued rise in obesity across all generations. Clearly despite substantial advances in research into adipose tissue this still has had limited impact on the on-going obesity epidemic across a majority of countries in the world. This book brings together many leading experts in the field to provide an up to date and comprehensive review of the key aspects of adipose tissue. It therefore includes chapters on evolution, development and inflammation together with a detailed review of brown and beige adipose tissue biology and their potential significance in preventing or combating obesity. These chapters are complemented by those on genetics and gender influences, together with nutrition through the life cycle. Ultimately the book provides an overview of the complexities of adipose tissue biology and the continuing challenge to combat obesity in the 21st century.

*Hematology* Margarita Guenova 2018-06-27 Hematology has constantly been advancing in parallel with technological developments that have expanded our understanding of the phenotypic, genetic, and molecular complexity and extreme clinical and biological heterogeneity of blood diseases. This has in turn allowed for developing more effective and less toxic alternative therapeutic approaches directed against critical molecular pathways. The continuous and rather extensive influx of new information regarding the key features and underlying mechanisms as well as treatment options in hematology requires a frequent update of this topic. The primary objective of this book is to provide the specialists involved in the clinical management and experimental research in hematological diseases with comprehensive and concise information on some important theoretical and practical developments in the biology, clinical assessment, and treatment of patients, as well as on some molecular and pathogenetic mechanisms and the respective translation into novel therapies.

**Mechanisms of Adiponectin Action** Tania Fiaschi 2019-07-26 The adipokine adiponectin is very concentrated in plasma, and decreased levels of adiponectin are associated with pathological conditions such as obesity, diabetes, cardiovascular diseases, and metabolic syndrome. When produced in its full-length form, adiponectin self-associates to generate multimeric complexes. The full-length form of adiponectin can be cleaved by the globular form of elastase that is produced locally, and the resulting biological effects are exerted in a paracrine or autocrine manner. The different forms of adiponectin bind to specific receptors consisting of two G-protein-independent, seven-transmembrane-spanning receptors, called AdipoR1 and AdipoR2, while T-cadherin has been identified as a potential receptor for high molecular weight complexes of adiponectin. Adiponectin exerts a key role in cellular metabolism, regulating glucose levels as well as fatty acid breakdown. However, its biological effects are heterogeneous, involving multiple target tissues. The Special Issue "Mechanisms of Adiponectin Action" highlights the pleiotropic role of this hormone through 3 research articles and 7 reviews. These papers focus on the recent knowledge regarding adiponectin in different target tissues, both in healthy and in diseased conditions.

Calf and Heifer Feeding and management Zhijun Cao 2020-12-11 From birth to first calving, the replacement heifer undergoes tremendous changes anatomically as well as in feeding and management practices. The calf changes from being a pseudo-monogastric to a full ruminant within a period of two months. During the same period, the calf is fed colostrum, milk, or milk replacer, and starter with or without hay. Notably, the lifetime milk production and health of a dairy cow is highly dependent on early life nutrition and management of the calf and, subsequently, the heifer. Hence, animal scientists continue to investigate critical areas such as colostrum feeding, the level of liquid feeding, gut microbial succession, energy and protein levels, housing, health management, and their interactions with the animal in an effort to help dairy producers raise successful and sustainable dairy enterprises.
