**Organizational Change, Innovation and Business Development** Magdalena Popowska 2022-09-23 This volume presents a collection of different views and perspectives, featuring both theoretical and empirical contributions, to provide deep insight into the role of innovation and of non-technological innovation (NTI) in contemporary business. It illustrates how NTI encourages organizational development as well as competitive advantage. Chapters display a variety of research methods, both qualitative and quantitative, including case studies, best practices, surveys, novel approaches to interpretations, concepts and theories. Together they contribute to a significant extension of the existing knowledge on non-technological innovations and their role in organizations. This volume highlights the effects of marketing and organizational innovation strategies on companies' innovation and overall performance, while demonstrating that the effects of NTI may vary depending on the phase of the innovation process, and how it differs within small, medium and large enterprises from manufacturing and service industries. It explores the bidirectional relationship between technological innovation (TI) and NTI, and considers the competences needed to implement NTI. The book is written for scholars and academic professionals from a wide variety of disciplines addressing issues of organizational change and innovation, new management techniques and strategies, and the sustainable growth of organizations. It may also be an interesting source of knowledge for graduate and postgraduate students in management.

Analyzing the Relationship Between Innovation, Value Creation, and Entrepreneurship  
Galindo-Martín, Miguel-Ángel 2019-12-13 Innovation stimulates and facilitates entrepreneurship because the highest levels of entrepreneurship are to be found in societies with the highest value creation and digital dividends. The higher levels of consumption, employment, and cost reduction generated by the implementation of digital technologies motivates entrepreneurs to expand their activity and promotes the emergence of new entrepreneurs. Positive outcomes can be generated by the implementation of innovation leaders to higher competition and new markets, incentivizing entrepreneurs to introduce new innovations to react to these higher levels of competition, which are accompanied by their corresponding value creation. Analyzing the Relationship Between Innovation, Value Creation, and Entrepreneurship is a pivotal reference source that analyzes the theoretical and empirical aspects of innovation as a factor that enhances value creation and the role of entrepreneurship. While highlighting topics such as data management, social enterprise, and digital marketing, this publication explores enhanced economic growth and the methods of higher levels of consumption in society. This book is ideally designed for corporate managers,

business executives, academicians, students, and researchers seeking current research on interrelationships between financial variables, strategies to apply them at the micro- and macro-level, and a consideration of the fiscal effects once implemented.

**Connected Vehicles** Radovan Miucic 2018-10-24 This book introduces concepts and technologies of Intelligent Transportation Systems (ITS). It describes state of the art safety communication protocol called Dedicated Short Range Communication (DSRC), currently being considered for adoption by the USDOT and automotive industry in the US. However, the principles of this book are applicable even if the underlying physical layer protocol of V2X changes in the future, e.g. V2X changes from DSRC to cellular-based connectivity. Fundamental ITS concepts include topics like global positioning system; Vehicle to Vehicle (V2V), Vehicle to Pedestrian (V2P), and Vehicle to Infrastructure (V2I) communications; human-machine interface; and security and privacy. Fundamental concepts are sometimes followed by the real-life test experimental results (such as in V2P Chapter) and description of the performance metrics used to evaluate the results. This book also describes equations and math used in the development of the individual parts of the system. This book surveys current and previous publications for trending research in the ITS domain. It also covers state of the art standards that are in place for the DSRC in the US, starting from the application layer defined in SAE J2735 all the way to physical layer defined in IEEE 802.11. The authors provide a detailed discussion on what is needed to extend the current standards to accommodate future needs of the vehicle communications, such as needs for future autonomous vehicles. Programs and code examples accompany appropriate chapters, for example, after describing remote vehicle target classification function a pseudo code and description is provided. In addition, the book discusses current topics of the technology such as spectrum sharing, simulation, security, and privacy. The intended audience for this book includes engineering graduate students, automotive professionals/engineers, researchers and technology enthusiasts.

**Water, Cryosphere, and Climate Change in the Himalayas** Ajay Kumar Taloor 2021-04-24 This edited book summarizes numerous research studies on remote sensing and GIS of natural resource management for the Himalaya region done by Indian Institutions and Universities over the last decade. It gives an overview of hydrometeorological studies on Himalayan water resources and addresses concerns in the development of water resources in this region, which is dealing with an increased pressure in population, industrialization and economic development. While the source of some of the major rivers of India are found in the Himalayas, the glaciers and water bodies in the region are continuously shrinking leading to a depletion of water and deterioration of water quality. This is affecting a population of up to 2.5 billion people. The ecosystems have been under threat due to deforestation, loss of biodiversity, expansion of agriculture and settlement, overexploitation of natural resources, habitat loss and fragmentation, poaching, mining, construction of roads and large dams, and unplanned tourism. Spaceborne remote sensing with its ability to provide synoptic and repetitive coverage has emerged as a powerful tool for assessment and monitoring of the Himalayan resources and phenomena. This work serves as a resource to students, researchers, scientists, professionals, and policy makers both in India and on a global level.

**Stop the Coming Civil War** Michael Savage 2014-10-07 In his trademark in-your-face style, bestselling author and top conservative talk-show host, Michael Savage has a lot to say about the state of the country in STOP THE COMING CIVIL WAR. According to Michael Savage, OUR NATION IS IN REAL TROUBLE and the seeds of a second conflagration have been sown. Not between the states - but between true patriots who believe in our nation's founding principles and those he believes are working every day to undermine them and change the very nature of the country. Michael Savage is convinced we face more than just political differences. He believes the split between right and left is possibly irreparable - unless we understand what's really happening and how we must act to stop it. This fervent warning offers the Savage truth - a call to action in the voting booth - in order to defend the freedoms our Constitution so brilliantly established.
