The tree level Feynman diagrams for the production of X^0 and X^1 are depicted in Fig. 1, where the t-channel D^- exchange is considered. In the present work, the contributions from the u and s channels are ignored because they are strongly suppressed due to the reason that an additional $s\bar{s}$ quark pair creation is created. Hence, the $K^{+++} c$ re-

Feynman up close. I saw Fermi and Teller. I saw Oppenheimer. I saw Hans Bethe: he was my boss. I saw quite a few very capable people. I became very interested in the difference between those who do and those who might have done. When I came to Bell Labs, I came into a very productive department. Bode was the department head at the

Sep 26, 2022 · Figure 1: The relevant Feynman diagrams for the vector dark matter annihilation with mass smaller than ~ 10 GeV. The diagram in the left is a s-channel annihilation process and the process shown in the right side takes place in both t- and u-channel. $H = \frac{1}{2} 2v^2 h (m^2 h \cos^2 + m^2 \sin^2)$; $S = \frac{1}{2} 2v^2 s (m^2 h \sin^2 + m^2 \cos^2)$; $HS = \sin^2 4v \dots$
