**High Attention Reading** Elizabeth Hale 2022 High Attention Reading offers a new way to get students of all reading levels to independently read informational texts with more effort, attention, and stamina. Hale argues that increasing the number of informational texts children read is important but not enough to achieve this goal. In order to prepare students for the reading demands of high school, it is essential that we provide strategic scaffolding for the habits of mind required to read this genre at a high level and the motivation to do so. The author introduces elementary and middle school teachers to a format called HART (High Attention Reading through Talking) that uses purposeful, intermittent student talk to heighten engagement and accountability during independent reading. The book includes easy-to-implement lessons to get started with HART, as well as discussions about the relationships among motivation, engagement, and content area reading. Chapters describe how HART scaffolds and supports student ownership of background knowledge, content vocabulary, and critical thinking about texts. Teachers will learn how to create conditions that foster motivation and engagement with informational text, while also creating authentic accountability to help students read to their potential. Book Features: An approach to independent reading that can be incorporated into any reading curriculum, from reading workshop to more structured comprehensive programs. Practical information for how to impact a difficult to reach aspect of reading—the internal effort students make while reading complex text independently. Strategies for building students' critical thinking through discussion and writing. Guidance for how to increase student ownership of attending to background knowledge and content vocabulary. A framework that can be used by reading and content (science and social studies) teachers in both elementary and middle school. Dedicated discussions on how to differentiate HART for English Learners. Lessons that include descriptive transcripts, reproducible supportive materials, and access to downloadable PowerPoints.

**How People Learn II** National Academies of Sciences, Engineering, and Medicine 2018-09-27 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Reading Achievement and Motivation in Boys and Girls Pelusa Orellana García 2018-05-02 This volume links theoretical and instructional approaches on how reading is motivated and assessed, and examines the interrelationship between reading motivation and achievement among boys and girls in culturally and geographically different settings. Much of the research on children's reading has focused on cognitive processes; however, reading is an activity that also requires interest and motivation. These attitudes are generally defined as readers' affect toward reading and their consequence is that children with more positive attitudes are more motivated to read. Taking into account the variability that exists within the notion of gender and age, this volume aims to examine and scrutinize previous research on the topic, as well as test theories on how the different dimensions of reading motivation vary with gender, in relation to cultural issues, motivational constructs, such as engagement and classroom climate, the role of emotions, interests and attitudes towards reading, among others. The book will be of interest to researchers,

educators, graduate students, and other professionals working in the area of literacy, reading motivation, reading achievement and gender differences.
