Emerging Freshwater Pollutants Tatenda Dalu 2022-02-01 Emerging Freshwater Pollutants: Analysis, Fate and Regulations comprises of 20 chapters, all written by leading experts. This book is written in the most practical terms and is easy to understand, with numerous helpful examples and case studies and can be used as a practical guide and important educational tool on issues concerning freshwater emerging pollutants. The organisation of the book exposes the reader in logical succession to the full range of complex scientific and management aspects of emerging freshwater pollutants in the developing world. The book recognises that water chemistry, emerging freshwater pollutants and management are inter-dependent disciplines. The book covers (i) the different monitoring techniques, current analytical approaches and instrumental analyses, (ii) fate and occurrence of emerging pollutants in aquatic systems and (iii) management policies and legislations on emerging pollutants. Thus, subsequent chapters elucidate chemicals with pollution potential, multi-detection approaches to analysis of organic pollutants in water, microplastics effects and photochemical transformation of emerging pollutants in freshwater systems. Whereas, other chapters address oxidation of organic compounds in aquatic systems, biomonitoring systems for detection of toxic levels of water pollutants, and health aspects of water recycling practices. This book melds several different perspectives on the subject of freshwater emerging pollutants and shows the interrelationships between the various professions that deal with water quality issues. Further, within the presentation of each separate chapter is discussion of how the various scientific and management aspects of the subject interrelate. Includes case studies and practical examples in each chapter Presents a much-needed interdisciplinary approach, representing the overlap between water chemistry and emerging freshwater pollutants Provides a thorough introduction to emerging tropical and freshwater pollutants that typically occur in these systems

The Go Programming Language Alan A. A. Donovan 2015-11-16 The Go Programming Language is the authoritative resource for any programmer who wants to learn Go. It shows how to write clear and idiomatic Go to solve real-world problems. The book does not assume prior knowledge of Go nor experience with any specific language, so you'll find it accessible whether you're most comfortable with JavaScript, Ruby, Python, Java, or C++. The first chapter is a tutorial on the basic concepts of Go, introduced through programs for file I/O and text processing, simple graphics, and web clients and servers. Early chapters cover the structural elements of Go programs: syntax, control flow, data types, and the organization of a program into packages, files, and functions. The examples illustrate many packages from the standard library and show how to create new ones of your own. Later chapters explain the package mechanism in more detail, and how to build, test, and maintain projects using the go tool. The chapters on methods and interfaces introduce Go's unconventional approach to object-oriented programming, in which methods can be declared on any type and interfaces are implicitly satisfied. They explain the key principles of encapsulation, composition, and substitutability using realistic examples. Two chapters on concurrency present in-depth approaches to this increasingly important topic. The first, which covers the basic mechanisms of goroutines and channels, illustrates the style known as communicating sequential processes for which Go is renowned. The second covers more traditional aspects of concurrency with shared variables. These chapters provide a solid foundation for programmers encountering concurrency for the first time. The final two chapters explore lower-level features of Go. One covers the art of metaprogramming using reflection. The other shows how to use the unsafe package to step outside the type system for special situations, and how to use the cgo tool to create Go bindings for C libraries. The book features hundreds of interesting and practical examples of well-written Go code that cover the whole language, its most important packages, and a wide range of applications. Each chapter has exercises to test your understanding and explore extensions and alternatives. Source code is freely available for download from http://gopl.io/ and may be conveniently fetched, built, and installed using the go get command.

Cross Veneration in the Medieval Islamic World Charles Tieszen 2016-02-28 One of the most common religious practices among medieval Eastern Christian communities was their devotion to venerating crosses and crucifixes. Yet many of these communities existed in predominantly Islamic contexts, where the practice was subject to much criticism and often resulted in accusations of idolatry. How did Christians respond to these allegations? Why did they advocate the preservation of a practice that was often met with confusion or even contempt?

My War Colby Buzzell 2006-09-05 An underemployed, skateboarding party animal, Colby Buzzell traded a dead-end future for the army—and ended up as a machine

gunner in Iraq. To make sense of the absurd and frightening events surrounding him, he started writing a blog about the war—and how it differed from the government's official version. But as his blog's popularity grew, Buzzell became the embedded reporter the Army couldn't control—despite its often hilarious efforts to do so. The result is an extraordinary narrative, rich with unforgettable scenes: the Iraqi woman crying uncontrollably during a raid on her home; the soldier too afraid to fight; the troops chain-smoking in a guard tower and counting tracer rounds; the first, fierce firefight against the "men in black." Drawing comparisons to everything from Charles Bukowski to Catch-22, My War depicts a generation caught in a complicated and dangerous world—and marks the debut of a raw, remarkable new voice.

Nuclear Science Abstracts 1976 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948

through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

Hillcrest Medical Center: Healthcare Documentation and Medical Transcription Patricia Ireland 2017-01-27 This innovative text uses a simulation approach to give readers interested in healthcare documentation and medical transcription careers a working knowledge of medical reports common in both acute and chronic care settings. Readers have access to transcription of 107 patient medical reports, including 56 new reports exclusive to the Eighth Edition. This edition also features 20 new speech recognition technology/medical editing (SRT) reports, as well as information on electronic health records (EHRs), quality assurance (QA), and scribes to keep readers up-to-date on the latest advances in the field. Organized by body system, the text includes full-color anatomy and physiology illustrations to make medical terminology easier to master. In addition, the authors have included a review of proper formatting, grammar, and style in accordance with the AHDI's BOOK OF STYLE, and a master glossary list compiles key terms in one section for convenient study and quick reference. Russian-Soviet Unconventional Wars in the Caucasus, Central Asia, and Afghanistan [Illustrated Edition] Dr. Robert F. Baumann 2015-11-06 [Includes 12 maps and 4 tables] In recent years, the U.S. Army has paid increasing attention to the conduct of unconventional warfare. However, the base of historical experience available for study has been largely American and overwhelmingly Western. In Russian-Soviet Unconventional Wars in the Caucasus, Central Asia, and Afghanistan, Dr. Robert F. Baumann makes a significant contribution to the expansion of that base with a well-researched analysis of four important episodes from the Russian-Soviet experience with unconventional wars. Primarily employing Russian sources, including important archival documents only recently declassified and made available to Western scholars, Dr. Baumann provides an insightful look at the Russian conquest of the Caucasian mountaineers

(1801-59), the subjugation of Central Asia (1839-81), the reconquest of Central Asia by the Red Army (1918-33), and the Soviet war in Afghanistan (1979-89). The history of these wars—especially as it relates to the battle tactics, force structure, and strategy employed in them—offers important new perspectives on elements of continuity and change in combat over two centuries. This is the first study to provide an in-depth examination of the evolution of the Russian and Soviet unconventional experience on the predominantly Muslim southern periphery of the former empire. There, the Russians encountered fierce resistance by peoples whose cultures and views of war differed sharply from their own. Consequently, this Leavenworth Paper addresses not only issues germane to combat but to a wide spectrum of civic and propaganda operations as well.

Emotive Signs in Language and Semantic Functioning of Derived Nouns in Russian Bronislava Volek 1987-01-01 This monograph is intended as a contribution to the integral description of language and verbal communication. Chapter I and Chapters VII and VIII are concerned with general problems of emotivity and expressivity in language as such and on all linguistic levels. These chapters describe emotivity from a new semiotic perspective and suggest a typology of emotive signs and meanings. Chapter II discusses general methodology of investigating and "measuring" emotive meaning in the area of word-formation (with examples from Russian). Chapters III, IV and V treat Russian diminutives fromgeneral-structural, lexical-contextual and pragmatic perspectives, while Chapter VI presents a comparison of the semantic structures of the various types of emotive noun derivatives which exist in Russian. The book thus begins with a general treatment on emotivity, goes on to consider the specific case of emotive noun-formation, giving special attention to the Russian diminutives, and then returns, by way of a comparison of the semantic structures of various types of emotive nouns, to more general problems of emotivity in language and to semiotic typology.

Languages of the World Asya Pereltsvaig 2012-02-09 What do all human languages have in common and in what ways are they different? How can language be used to trace different peoples and their past? Are certain languages similar because of common descent or language contact? Assuming no prior knowledge of linguistics, this textbook introduces readers to the rich diversity of human

languages, familiarizing students with the variety and typology of languages around the world. Linguistic terms and concepts are explained, in the text and in the glossary, and illustrated with simple, accessible examples. Eighteen language maps and numerous language family charts enable students to place a language geographically or genealogically. A supporting website includes additional language maps and sound recordings that can be used to illustrate the peculiarities of the sound systems of various languages. 'Test yourself' questions throughout the book make it easier for students to analyze data from unfamiliar languages.

The Innocence of Memories Orhan Pamuk 2019-01-17 The Innocence of Memories is an important addition to the oeuvre of Nobel Prize-winning author Orhan Pamuk. Comprised of the screenplay of the acclaimed film by Grant Gee from 2015 (by the same name), a transcript of the author and filmmaker in conversation, and captivating colour stills, it is an essential volume for understanding Pamuk's work. Drawing on the themes from Pamuk's best-selling books, The Museum of Innocence, Istanbul and The Black Book, this book is both an accompaniment to the author's previous publications and a wonderfully revelatory exploration of Orhan Pamuk's key ideas about art, love, and memory.

EXAFS Spectroscopy B. K. Teo 2013-04-17 This book on Extended X-Ray Absorption Fine Structure (EXAFS) Spectroscopy grew out of a symposium, with the same title, organized by us at the 1979 Meeting of the Materials Research Society (MRS) in Boston, MA. That meeting provided not only an overview of the theory, instrumentation and practice of EXAFS Spectroscopy as currently employed with photon beams, but also a forum for a valuable dialogue between those using the conventional approach and those breaking fresh ground by using electron energy loss spectroscopy (EELS) for EXAFS studies. This book contains contributions from both of these groups and provides the interested reader with a detailed treatment of all aspects of EXAFS spectroscopy, from the theory, through consideration of the instrumentation for both photon and electron beam purposes, to detailed descriptions of the applications and physical limitations of these techniques. While some of the material was originally presented at the MRS meeting all of the chapters have been specially written for this book and contain much that is new and significant.
