Concepts of Biology Samantha Fowler 2018-01-07 *Concepts of Biology* is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Biology Marielle Hoefnagels 2021-03 "I have been teaching nonmajors biology at the University of Oklahoma since 1997 and over that time have encountered many students who fear science in general and biology in particular. The complexity, abstractions, and unfamiliar terms can seem overwhelming at first, but with practice, I know that anyone can think like a scientist. Learning to think scientifically is important well beyond passing your biology class. After all, scientific issues confront you every day as you

navigate your life and your social media accounts. How do you know if a claim about climate change is scientific? Will you be able to identify misinformation and interpret graphs during the next global health crisis? This book will teach you not only to understand the scientific terms you encounter but also to distinguish "good science" from unscientific claims. I've created the following features to help you make the transition from memorizing facts to understanding concepts—from accepting scientific claims to analyzing them for yourself. These tools will help you to pass your class and to be an informed citizen"--

Building a Pathway to Student Learning Steven K. Jones 2015-03-01 This book leads you through the process of designing a learning-centered course. It is written as a “how-to” handbook, providing step-by-step guidance on creating a pathway to student learning, including 26 workboxes (also available free online) that lead you through each element of the course design process and promote a rich reflection process akin to being in a workshop setting. The authors prompt you to (1) consider the distinctive characteristics of your students; (2) clearly articulate your course learning goals; (3) create aligned summative assessments; (4) identify the specific knowledge, skills, and attitudes students will need in order to be successful; (5) craft effective learning experiences, informed by the well-documented research on how people learn; and (6) incorporate formative assessment to ensure you and your students are staying on track. Completion of the sequence of worksheets leads to a poster as a visual display of your course design. This graphic depiction of your course ties the components together, provides a clear map of action for teaching your course, for modifying as you evaluate the success of particular strategies or want to introduce new concepts, and for developing your syllabus. A rubric for evaluating course posters is included. For faculty developers, this book provides a proven and ready-made resource and text around which to design or redesign learner-centered course design workshops or multi-day course design retreats, replicating or modifying the renowned workshop that the authors have developed at the Air Force Academy for both faculty new to teaching and those with many years of teaching experience under their belt.

Vitamins In Human Biology and Medicine (1981) Michael H Briggs 2017-11-22 It is the purpose of this book to try to offer a modern perspective on the importance of vitamins in human biology and medicine. There have been recent revivals of attempts to use vitamins as therapeutic agents by administering doses many times the recommended allowance. This use or 'megavitamin therapy' is reviewed by Dr. Reynold Spector, with particular emphasis on vitamin entry to the central nervous system. Of related interest is the chapter by Dr. John Blass discussing central nervous system manifestations of thiamin deficiency, and also the contribution by Ms. Fiona Cumming and clinical toxicity of vitamin supplementation.

Quadruplets and Higher Multiple Births Marie M. Clay 1991-06-28 Improved neonatal care and nutrition have meant that many more babies from quadruplet and higher-order conceptions survive than in the past. In this book, the author brings together what is known from historical records and reports in the medical, psychological, and popular press on the lives of these children and the psychodevelopmental consequences of their multiple status. She points to the contribution that research studies on higher multiple sets could make to our understanding of genetic-environmental interactions and gives valuable methodological advice for those wishing to initiate such a study. Changes in social practices and medical knowledge are highlighted, various aspects of pregnancy and birth are discussed, and the practical and emotional problems faced by families of multiple sets are sensitively described. Appended to the book is an illustrated catalogue of quadruplet case reports gleaned from the literature, including birth details and postnatal histories.

The 'Mystical' Tcm Triple Energizer Dr. Louis Gordon 2016-09-22 The mystery is solved! The actual location, composition, and morphology of the mysterious TCM triple energizer (San Jiao) organ will surprise you. Numerous recent scientific research findings confirm ancient TCM philosophy was eons ahead of its time. This book discusses newly discovered organ systems (Primo Vascular System, the gut microbiome, the omnipresent neuromyofascial metasystem, endocrine function of fat) and how they affect the Triple Energizer. This book elucidates the actual location, composition, and morphology of the Triple Energizer as expressed by modern scientific discovery, and evidence is presented to show how the Triple

Energizer functions and why it has remained hidden all this time. Those who believe that the Triple Burner has a name but no form will be truly amazed as to its actual location and its actual form. Numerous other practical TCM concepts are discussed. A blastocyst grown on a petri dish in 1977 resulted in the very first IVF baby, Louise Brown. Commenting on the Nan Ching, Yeh Lin described the blastocyst when he said, It is the utensil that stores and transforms the essence, and it is the place to which the womb, which conceives the embryo, is tied. Thus, it is the origin of mans life. Hence, it is called gate of life.

Commenting on Nan Ching, Y Shu said, The spleen takes in the five tastes. It transforms them to produce the five influences . . . and to make flesh and skin grow. Since about 2005, researchers have been astonished to find scent receptors and the five known taste sensors throughout the body smelling and tasting things deep inside of us. These taste and odor receptors have been found in the kidneys, stomach, intestines, pancreas, lungs, brain, spine, bladder, sinuses, muscle tissue, and even the anus. Bitter taste receptors have been found in sperm. Researchers believe these receptors are distributed throughout the entire vascular system. As the Heart controls the blood vessels in TCM, it makes perfect sense that the Heart masters the odors, exactly as ancient TCM scholars state.
