Mergers and Productivity Steven N. Kaplan 2007-12-01 Mergers and Productivity offers probing analyses of high-profile mergers in a variety of industries. Focusing on specific acquisitions, it illustrates the remarkable range of contingencies involved in any merger attempt. The authors clearly establish each merger's presumed objectives and the potential costs and benefits of the acquisition, and place it within the context of the broader industry. Striking conclusions that emerge from these case studies are that

merger and acquisition activities were associated with technological or regulatory shocks, and that a merger's success or failure was dependent upon the acquirer's thorough understanding of the target, its corporate culture, and its workforce and wage structures prior to acquisition. Sifting through a wealth of carefully gathered evidence, these papers capture the richness, the complexity, and the economic intangibles inherent in contemporary merger activity in a way that large-scale studies of mergers cannot.

Bank and Insurance Capital Management Frans de Weert 2011-10-14 In the aftermath of the financial crisis, capital management has become a critical factor in value creation for banks and other financial institutions. Although complex and subject to regulatory change, the strategic importance of capital management became apparent during the crisis and has moved the subject to the top of corporate agendas. Bank and Insurance Capital Management is an essential guide to help banks and insurance companies understand and manage their capital position. Bridging the gap between theory and practice, it provides proven techniques for managing bank capital, as well as explaining key capital management perspectives, including accounting, regulatory, risk and capital management and corporate finance. It also shows how to analyze a firm's stakeholders such as depositors, policy holders, debt holders and shareholders, and manage their expectations, and how to align risk and capital management so as to best optimize the return on capital and preserve capital in periods of stress. Economic capital is also discussed in depth, as are the practicalities of bank and insurance M&A, and the book also shows how financial innovations can be used to optimise the capital position and how diversification effects are reflected in the capital position. This book will arm readers with the knowledge and skills needed to understand how capital management can improve capital structure and performance, achieving an optimal cost of, and return on capital, creating value as a result.

Lebanon-Determinants of Commercial Bank Deposits in a Regional Financial Center Mr. Harald Finger
2009-09-01 This paper empirically examines the demand for commercial bank deposits in Lebanon, a regional financial center. With Lebanon's high fiscal deficits financed largely by domestic commercial banks that rely on deposit funding, deposit growth is a key variable to assess government financing conditions. At the macro level, we find that domestic factors such as economic activity, prices, and the interest differential between the Lebanese pound and the U.S. dollar are significant in explaining deposit demand, as are external factors such as advanced economy economic and financial conditions and variables proxying the availability of funds from the Gulf. Impulse response functions and variance decomposition analyses underscore the relative importance of the external variables. At the micro level, we find that in addition, bank-specific variables, such as the perceived riskiness of individual banks, their liquidity buffers, loan exposure, and interest margins, bear a significant influence on the demand for deposits.

Institutional Learning and Knowledge Transfer Across Epistemic Communities Elias G. Carayannis
2011-11-25 Over the past several decades, as the pace of globalization has accelerated, operational issues of international coordination have often been overlooked. For example, the global financial crisis that began in 2007 is attributed, in part, to a lack of regulatory oversight. As a result, supranational organizations, such as the G-20, the World Bank, and the International Monetary Fund, have prioritized strengthening of the international financial architecture and providing opportunities for dialogue on national policies, international co-operation, and international financial institutions. Prevailing characteristics of the global economic systems, such as the increasing power of financial institutions, changes in the structure of global production, decline in the authority of nation-states over their national economy, and creation of global institutional setting, e.g., global governance have created the conditions for a naturally evolving

process towards enabling national epistemic communities to create institutions that comply with global rules and regulations can control crises. In this context, transfer of technical knowledge from the larger organizations and its global epistemic communities to member communities is becoming a policy tool to “convince” participants in the international system to have similar ideas about which rules will govern their mutual participation. In the realm of finance and banking regulation, the primary focus is on transfer of specialized and procedural knowledge in technical domains (such as accounting procedures, payment systems, and corporate governance principles), thereby promoting institutional learning at national and local levels. In this volume, the authors provide in-depth analysis of initiatives to demonstrate how this type of knowledge generated at the international organization level, is codified into global standards, and disseminated to members, particularly in the developing world, where the legal and regulatory infrastructure is often lacking. They argue that despite the challenges, when a country intends to join the global system, its institutions and economic structures need to move toward the global norms. In so doing, they shed new light on the dynamics of knowledge transfer, financial regulation, economic development, with particular respect to supporting global standards and avoiding future crises.

The more complicated details and technical problems related to in-chapter discussion are provided in appendixes to the chapters. Since the author team's focus is on return and risk and the sources of that return and risk in domestic and foreign financial markets and institutions, this text relates ways in which a modern financial manager, saver, and investor can expand return with a managed level of risk to achieve the best, or most favorable, return–risk outcome.

Fundamentals of Financial Institutions Management Marcia Millon Cornett 1999

Financial Markets and Institutions Anthony Saunders 2021 "The last 30 years have been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets, as well as strategies that can be adopted for controlling and better managing these risks. Special emphasis is also put on new areas of operations in financial markets and institutions such as asset securitization, off-

balance-sheet activities, and globalization of financial services"--

Bank Competition, Efficiency and Liquidity Creation in Asia Pacific N. Genetay 2015-07-28 Banking market integration in the Asia Pacific has greatly accelerated in recent years, in an environment of many other rapid advances in banking and finance. This has increased competition between domestic and foreign banks, and made the measurement of bank efficiency, competition, and liquidity creation a critical issue for both policy makers and bank managers. This book investigates important policy-related issues in Asia Pacific banking. It analyses the link between competition and stability, examining the cases of fourteen Asia Pacific countries between 2003 and 2010, and goes on to discuss whether bank shareholder value is influenced by cost and profit efficiency changes over time. The authors explore the different ways in which banks in Asia-Pacific create liquidity, and whether this is linked to capital generation. This book provides valuable insight for researchers, policy makers and bank managers with an interest in financial rationalization, restructuring and consolidation.

Introduction to Securitization Frank J. Fabozzi 2008-06-06 *Introduction to Securitization* outlines the basics of securitization, addressing applications for this technology to mortgages, collateralized debt obligations, future flows, credit cards, and auto loans. The authors present a comprehensive overview of the topic based on the experience they have gathered through years of interaction with practitioners and graduate students around the world. The authors offer coverage of such key topics as: structuring agency MBS deals and nonagency deals, credit enhancements and sizing, using interest rate derivatives in securitization transactions, asset classes securitized, operational risk factors, implications for financial markets, and applying securitization technology to CDOs. Finally, in the appendices, the authors provide an essential introduction to credit derivatives, an explanation of the methodology for the valuation of

MBS/ABS, and the estimation of interest rate risk. Securitization is a financial technique that pools assets together and, in effect, turns them into a tradable security. The end result of a securitization transaction is that a corporation can obtain proceeds by selling assets and not borrowing funds. In real life, many securitization structures are quite complex and enigmatic for practitioners, investors, and finance students. Typically, books detailing this topic are either too lengthy, too technical, or too superficial in their presentation. Introduction to Securitization is the first to offer essential information on this topic at a fundamental, yet comprehensive level-providing readers with a working understanding of what has become one of today's most important areas of finance. Authors Frank Fabozzi and Vinod Kothari, internationally recognized experts in the field, clearly define securitization, contrast it with corporate finance, and explain its advantages. They carefully illustrate the structuring of asset-backed securities (ABS) transactions, including agency mortgage-backed securities (MBS) deals and nonagency deals, and show the use of credit enhancements and interest rate derivatives in such transactions. They review the collateral classes in ABS, such as retail loans, credit cards, and future flows, and discuss ongoing funding vehicles such as asset-backed commercial paper conduits and other structured vehicles. And they explain the different types of collateralized debt obligations (CDOs) and structured credit, detailing their structuring and analysis. To complement the discussion, an introduction to credit derivatives is also provided. The authors conclude with a close look at securitization's impact on the financial markets and the economy, with a review of the now well-documented problems of the securitization of one asset class: subprime mortgages. While questions about the contribution of securitization have been tainted by the subprime mortgage crisis, it remains an important process for corporations, municipalities, and government entities seeking funding. The significance of this financial innovation is that it has been an important form of raising capital for corporations and government entities throughout the world, as well as a vehicle for risk management. Introduction to Securitization offers practitioners and students a simple and comprehensive entry into the interesting world of securitization and structured credit.

Modern Banking Shelagh Heffernan 2005-05-05 Modern Banking focuses on the theory and practice of banking, and its prospects in the new millennium. The book is written for courses in banking and finance at Masters/MBA level, or undergraduate degrees specialising in this area. Bank practitioners wishing to deepen and broaden their understanding of banking issues may also be attracted to this book. While they

often have exceptional and detailed knowledge of the areas they have worked in, busy bankers may be all too unaware of the key broader issues. Consider the fundamental questions: What is unique about a bank? and What differentiates it from other financial institutions? Answering these questions begins to show how banks should evolve and adapt - or fail. If bankers know the underlying reasons for why profitable banks exist, it will help them to devise strategies for sustained growth. Modern Banking concludes with a set of case studies that give practical insight into the key issues covered in the book: The core banking functions Different types of banks and diversification of bank activities Risk management: issues and techniques Global regulation: Basel 1 and Basel 2. Bank regulation in the UK, US, EU, and Japan Banking in emerging markets Bank failure and financial crises Competitive issues, from cost efficiency to mergers and acquisitions Case Studies including: Goldman Sachs, Bankers Trust/Deutsche Bank, Sumitomo Mitsui, Bancamer
