It is unique in bringing together such a wide array of experts and correspondingly offers a complete coverage of recent developments in risk management.

The text goes beyond standard DCF analysis by including additional valuation methods commonly used in practice, such as comparables, simulations (including Crystal Ball®), and real options. In addition, discussions are considered against the backdrop of other quantitative and qualitative corporate issues that affect valuation, including: Organizational structure and incentives: The text examines how the corporate decision-making process as well as the incentive system can positively or negatively affect valuation. Strategic analysis and real options: Real options are presented as a tool to complement executive intuition and provide a more disciplined evaluation process that focuses on creating value. Risk management and hedging: Risks associated with interest rate fluctuations, variable foreign exchange rates, and fluctuating commodity prices can create hedging and risk management opportunities that affect value. Financing: The ability to secure attractive financing terms is an important source of value, and readers should understand how financing opportunities influence the value of an investment opportunity. Irrational behavior: The text examines how limitations in cognitive abilities and biases in assessing abilities of key players can affect valuation.

**Handbook of Corporate Finance** B. Espen Eckbo 2007-05-21 Judging by the sheer number of papers reviewed in this Handbook, the empirical analysis of firms' financing and investment decisions—empirical corporate finance—has become a dominant field in financial economics. The growing interest in everything “corporate is fueled by a healthy combination of fundamental theoretical developments and recent widespread access to large transactional data bases. A less scientific—but nevertheless important—source of inspiration is a growing awareness of the important social implications of corporate behavior and governance. This Handbook takes stock of the main empirical findings to date across an unprecedented spectrum of corporate finance issues, ranging from econometric methodology, to raising capital and capital structure choice, and to managerial incentives and corporate investment behavior. The surveys are written by leading empirical researchers that remain active in their respective areas of interest. With few exceptions, the writing style makes the chapters accessible to industry practitioners. For doctoral students and seasoned academics, the surveys offer dense roadmaps into the empirical research landscape and provide suggestions for future work. \*The Handbooks in Finance series offers a broad group of outstanding volumes in various areas of finance \*Each individual volume in the series should present an accurate self-contained survey of a sub-field of finance \*The series is international in scope with contributions from field leaders the world over

**Equipment Leasing and Financing** Richard M. Contino 2019-11-08 This book explains how companies that sell equipment and other products can increase product sales and add an additional profit center by establishing their own innovative leasing and financing operation. Industry data shows that the need for equipment and other product financing has evolved over the past few decades to where now nine out of ten U.S. companies use leasing or other forms of third party financing to acquire the equipment or other products they need. For market-aggressive companies offering products for sale, having an available in-house customer product leasing and financing program as a product marketing strategy can dramatically increase their ability to close product sales. In the past, establishing an in-house financing activity was difficult and expensive, requiring unique and substantial additional business operational and financing components in addition to an extensive learning curve. This is no longer the case. In recent years, there have been wide-spread market advances surrounding the financing of equipment and other products that enable forward-thinking companies to cost-effectively establish their own in-house product financing activity, using readily available, state-of-the-art financing software programs, and third-party back-office services to manage any part of the financing process. This book will provide a product vendor with the turnkey know how it needs to assess the viability of establishing an in-house equipment financing operation, as well as the various considerations needed to set up and run its own cost-effective and profitable product financing activity.
