Environmental Social Sciences Ismael Vaccaro 2010-11-11 The relationship between human communities and the environment is extremely complex. In order to resolve the issues involved with this relationship, interdisciplinary research combining natural sciences, social sciences, and humanities is necessary. In this 2010 book, specialists summarise methods and

research strategies for various aspects of social research devoted to environmental issues. Each chapter is illustrated with ethnographic and environmental examples, ranging from Australia to Amazonia, from Madagascar to the United States, and from prehistoric and historic cases to contemporary rural and urban ones. It deals with climate change, deforestation, environmental knowledge, natural reserves, politics and ownership of natural resources, and the effect of differing spatial and temporal scales. Contributing to the intellectual project of interdisciplinary environmental social science, this book shows the possibilities social science can provide to environmental studies and to larger global problems and thus will be of equal interest to social and natural scientists and policy makers.

Around Porth Aldo Bacchetta 2004-03 This fascinating collection of archive images captures the essence of community life in Porth during the last century and the town's intrinsic role in the industrial and commercial history of the Rhondda. The rural character of this part of South Wales is recalled in images of farmers ploughing their fields and timeless views of the surrounding valleys, while snapshots of the Hetty engine and soot-covered miners reveal the industrial heritage of the district. From local shops and businesses, royal visits and street parties, to clubs and societies, including the Pentref Bowmen Archery Club, and the Royal Welsh Male Choir, which sang before Queen Victoria at Windsor Castle in November 1895, each picture captures an aspect of life in Porth and the Rhondda valleys as it once was. Accompanied by detailed and informative text, this volume also remembers the local people who lived and worked in this vibrant community: the miners, sportsmen, traders, nurses and teachers who contributed to the history of Porth.

Tec21 Educational Model: challenges for a transformative experience Silvia Lizett Olivares Olivares 2021-10-20 In 2012, the Board of Trustees of Tecnológico de Monterrey established, as an institutional mandate, the strengthening of academic quality. To this end, it defined a set of strategic initiatives, among which was the development and implementation of a new educational model that would allow students, the institution, and society as a whole to face the challenges and opportunities that are envisioned for the 21st century. The team created for the design of the educational model conducted extensive literature research, consulted the various audiences served by the institution and made visits to learn about innovative experiences that could serve as a reference. This book stemmed from an initiative to recapitulate the foundations of the Tec21 Educational Model and include updates to its components that have been made since its implementation.

A Functional Biology of Parasitism G.W. Esch 2013-03-07 Series Editor: Peter Calow, Department of Zoology, University of Sheffield, England The main aim of this series will be to illustrate and to explain the way organisms 'make a living' in nature. At the heart of this - their

functional biology - is the way organisms acquire and then make use of resources in metabolism, movement, growth, reproduction, and so on. These processes will form the fundamental framework of all the books in the series. Each book will concentrate on a particular taxon (species, family, class or even phylum) and will bring together information on the form, physiology, ecology and evolutionary biology of the group. The aim will be not only to describe how organisms work, but also to consider why they have come to work in that way. By concentration on taxa which are well known, it is hoped that the series will not only illustrate the success of selection, but also show the constraints imposed upon it by the physiological, morphological and developmental limitations of the groups. Another important feature of the series will be its organismic orientation. Each book will emphasize the importance of functional integration in the day to-day lives and the evolution of organisms. This is crucial since, though it may be true that organisms can be considered as collections of gene determined traits, they nevertheless interact with their environment as integrated wholes and it is in this context that individual traits have been subjected to natural selection and have evolved.

Preventing Drowning World Health Organization 2017 "Far too many people around the world know the pain of losing a loved one to drowning. Each year almost 360,000 people die from drowning--over 90% of them in low- and middle income countries. More than half of these deaths are among those younger than 25, with children aged under 5 facing the greatest risk. Drowning is the third leading cause of death worldwide for those aged from 5 to 14. Despite these tragic facts, drowning prevention gets relatively little attention and few resources. There is far more we can do to prevent drowning. Global commitments made as part of the Sustainable Development Goals, for example, cannot be met as long as this preventable cause of death is left largely unchecked. All of us--policymakers, parents, non-profit organizations, businesses and concerned citizens--can help prevent drowning. Explaining how is the goal of this guide. Building on the World Health Organization's 2014 Global report on drowning, the following pages provide practical, step-by-step guidance on how to implement 10 effective measures to prevent drowning. They range from community-based solutions, such as day care for children and barriers controlling access to water, to effective national policies and legislation around water safety, including setting and enforcing boating, shipping and ferry regulations. Data show that all of these solutions can help save lives. The more we work together to implement the measures outlined in this guide, the more lives can be saved. We urge all concerned to adopt as many of the interventions and strategies as their resources will allow, and to protect those most vulnerable without delay."--Page iv.

CUP), Paynter and Peter Aston set out to demonstrate the importance of drawing on children's creative talent as the basis for music education. Their book reflected work that its authors had been doing in schools and colleges during the preceding decade. Much that has happened since in music education has in no small measure been influenced by *Sound and Silence* and by subsequent publications of John Paynter's. Now, twenty years later, John Paynter, himself a composer, views some thirty years of teaching music. His basic philosophy is the same: music is a creative art in all its modes--composing (inventing), performing (interpreting) and listening (remaking the music within ourselves). Today, John Paynter believes as firmly as ever that creativity is the starting point for all music education. To meet the new demands and fresh opportunities of a progressive educational program there have been developments in this philosophy. The projects and assignments in *Sound and Structure* are the fruits of this development. A cassette accompanies John Paynter's book, and contains those musical examples that may be difficult for the reader to obtain from usual sources. The cassette will complete the reader's enjoyment of the book.

The Anatomy of a Moment Javier Cercas 2012-01-05 In February 1981, just as Spain was finally leaving Franco's dictatorship and during the first democratic vote in parliament for a new prime minister - Colonel Tejero and a band of right-wing soldiers burst into the Spanish parliament and began firing shots. Only three members of Congress defied the incursion and did not dive for cover: Adolfo Suarez the then outgoing prime minister, who had steered the country away from the Franco era, Gutierrez Mellado, a conservative general who had loyally served democracy, and Santiago Carillo, the head of the Communist Party, which had just been legalised. In *The Anatomy of a Moment*, Cercas examines a key moment in Spanish history, just as he did so successfully in his Spanish Civil War novel, *Soldiers of Salamis*. This is the only coup ever to have been caught on film as it was happening, which, as Cercas says, 'guaranteed both its reality and its unreality'. Every February a few seconds of the video are shown again and Spaniards congratulate themselves for standing up for democracy, but Cercas says that things were very quiet that afternoon and evening while all over Spain people stayed inside waiting for the coup to be defeated or to triumph.

Pathophysiology Carol Porth 2009 This is the Eighth Edition of the comprehensive and well-respected text and reference of pathophysiology. of health. By taking this physiologic approach, the author ensures a comprehension of the whole of body function. By integrating all of the aspects of the human body into a total functional whole, the student can grasp both the physical and psychological aspects of altered health. This edition has a completely revamped art program and new displays that showcase pathophysiological processes through detailed visual representation. Other highlights include a greater international focus, expanded content on evidence-based practice and completely revised, updated chapters on genetics, disorders of white blood cells and lymphoid tissues, and innate and acquired immunity. A bound-in CD-ROM and companion Website include Weblinks, an NCLEX® tutorial, a Spanish-English audio glossary, monographs of 100 most commonly prescribed drugs, over 30 Concepts in Action animations, 5 Clinical Simulations, and dosage calculation quizzes.
