**Global Perspectives on Catholic Religious Education in Schools** Michael T. Buchanan 2015-10-05 This book covers theoretical aspects of Catholic Religious Education in schools and examines them from multiple theoretical and contextual perspectives. It captures the contemporary academic and educational developments in the field of Religious Education while discussing in detail the challenges that Religious Educators face in different European, Asian, African, Australian, American and Latin American countries. The edited collection investigates how to pass on a Catholic heritage as a "living tradition" in diversely populated schools and communities. In this way it explores and asserts the proper identity of Catholic Religious Education in dialogue with Catechetics and with the wider discipline of Religious Education. As

the different articles of this publication demonstrate - through a series of interesting and critical points of view - Catholic Religious Education is confronted with many challenges from the risk of marginalization to the confusion produced by a religious indifferentism leading to a strictly comparative or neutral method in the study of religions. It is essential to take into account in our research perspectives that Catholic Religious Education is not only a subject but also a mission in the light of the diakonia of truth in the midst of humanity H.E. Cardinal Zenon Grocholewski, Prefect, Congregation for Catholic Education, Holy See, Vatican City Religious education teachers cannot by themselves overcome the ills of society, but religious education...can help to create better citizens of the world as some authors argue throughout this collection. could not ask more from such timely and provocative collection. It is a gift to the profession and to Catholic Religious Education. Prof. Gloria Durka, Fordham University, New York, NY, USA

**Weather Flying, Fifth Edition** Robert Buck 2013-07-06 THE BEST RESOURCE A PILOT CAN HAVE TO UNDERSTAND HOW TO FLY IN ALL TYPES OF WEATHER How do you improve on the best guide for pilots to learn how to fly in all kinds of weather? The answer is the Fifth Edition of Weather Flying. Regarded as the bible of weather flying, this aviation classic not only continues to make complex weather concepts understandable for even the least experienced of flyers, but has now been updated to cover new advances in technology. At the same time, this respected text still retains many of its original insights from over four decades of publication, provided by renowned weather flying veteran Robert N. Buck. In a straightforward style, new author Robert O. Buck (son of the book's original author) delves into how computers, personal electronic devices, electronic flight instrument systems, and other technologies are changing the way general aviation pilots fly weather. He addresses the philosophy and discipline required to use these systems, what they are really telling us, and their task as supplement to good flying sense. The updated Fifth Edition also discusses how to handle changes in FSS weather briefing, including a look at new weather information products and airborne datalink weather information as they affect weather flying. This new edition features: Discussions of weather information--what it is, how to get it, and how to use it Explanations of various weather phenomena and how they affect a flight Updates on the new GPS and smart technology used in weather flying Changes in weather information and briefings Descriptions of improved anti- and deicing systems Serious discussion of the pilot-electronics interface Now more than ever, having the Bucks' Weather Flying at the controls is the next best thing to having the authors with you in the cockpit.

**B Corp Entrepreneurs** Florentine Mariele Sophie Roth 2018-06-20 Highlighting the motivations of B Corp entrepreneurs in Chile, this book explores the phenomenon behind for-profit organisations that are committed to social and ecological sustainability as well as human welfare. By examining the personal and social drivers of businesses which are not solely focused on profit-making, the authors reveal a dual orientation that is an important factor in the creation of hybrid organisations. Offering an in-depth study of B Corp entrepreneurs in Chile, the largest B Corp community outside of North America, this pioneering book challenges dominant assumptions that there is only one ideal type of entrepreneur and argues that the values of the purely profit-driven and purely social-driven do in fact intersect. An enlightening read for researchers of social business and sustainability, this book analyses perceptions towards success, and the desire to solve environmental problems, underlining a fundamental aspect of the entrepreneur's personal value structure.

**Automated Machine Learning** Frank Hutter 2019-05-17 This open access book presents the first comprehensive overview of general methods in Automated Machine Learning (AutoML), collects descriptions of existing systems based on these methods, and discusses the first series of international challenges of AutoML systems. The recent success of commercial ML applications and the rapid growth of the field has created a high demand for off-the-shelf ML methods that can be used easily and without expert knowledge. However, many of the recent machine learning successes crucially rely on human experts, who manually select appropriate ML architectures (deep learning architectures or more traditional ML workflows) and their hyperparameters. To overcome this problem, the field of AutoML targets a progressive automation of machine learning, based on principles from optimization and machine learning itself. This book serves as a point of entry into this quickly-developing field for researchers and advanced students alike, as well as providing a reference for practitioners aiming to use AutoML in their work.

Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. **Curriculum Overload A Way Forward** OECD 2020-11-25 Schools are constantly under pressure to keep up with the pace of changes in society. In parallel, societal demands for what schools should teach are also constantly changing; often driven by political agendas, ideologies, or parental pressures, to add global competency, digital literacy, data literacy, environmental literacy, media literacy, social-emotional skills, etc. This "curriculum expansion" puts pressure on policy makers and schools to add new contents

to already crowded curriculum.
