Pre-Incident Indicators of Terrorist Incidents Brent L. Smith 2011-01 This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Christopher B. Field 2012-05-28 This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes,

environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Entertainment Science Thorsten Hennig-Thurau 2018-08-01 The entertainment industry has long been dominated by legendary screenwriter William Goldman's "Nobody-Knows-Anything" mantra, which argues that success is the result of managerial intuition and instinct. This book builds the case that combining such intuition with data analytics and rigorous scholarly knowledge provides a source of sustainable competitive advantage - the same recipe for success that is behind the rise of firms such as Netflix and Spotify, but has also fueled Disney's recent success. Unlocking a large repertoire of scientific studies by business scholars and entertainment economists, the authors identify essential factors, mechanisms, and methods that help a new entertainment product succeed. The book thus offers a timely alternative to "Nobody-Knows" decision-making in the digital era: while coupling a good idea with smart data analytics and entertainment theory cannot guarantee a hit, it systematically and substantially increases the probability of success in the entertainment industry. Entertainment Science is poised to inspire fresh new thinking among managers, students of entertainment, and scholars alike. Thorsten Hennig-Thurau and Mark B. Houston - two of our finest scholars in the area of entertainment marketing - have produced a definitive research-based compendium that cuts across various branches of the arts to explain the phenomena that provide consumption experiences to capture the hearts and minds of audiences. Morris B. Holbrook, W. T. Dillard Professor Emeritus of Marketing, Columbia University Entertainment Science is a must-read for everyone working in the entertainment industry today, where the impact of digital and the use of big data can't be ignored anymore. Hennig-Thurau and Houston are the scientific frontrunners of knowledge that the industry urgently needs. Michael Kölmel, media entrepreneur and Honorary Professor of Media Economics at University of Leipzig Entertainment Science's winning combination of creativity, theory, and data analytics offers managers in the creative industries and beyond a novel, compelling, and comprehensive approach to support their decision-making. This ground-breaking book marks the dawn of a new Golden Age of fruitful conversation between entertainment scholars, managers, and artists. Allègre

Stung Bethany Wiggins 2013-04-02 When the honeybee population disappears and a pandemic sweeps across the planet, the government tried a bio-engineered cure even deadlier than the problem. Branded with the mark of the vaccine, Fiona must navigate this new dystopian world. But there's no cure for being stung. . . Fiona doesn't remember going to sleep. But when she opens her eyes, she discovers her entire world has been altered—her house is abandoned and broken, and the entire neighborhood is barren and dead. Even stranger is the tattoo on her right wrist—a black oval with five marks on either side—that she doesn't remember getting but somehow knows she must cover at any cost. And she's right. When the honeybee population collapsed, a worldwide pandemic occurred and the government tried to bio-engineer a cure. Only the solution was deadlier than the original problem—the vaccination turned people into ferocious, deadly beasts who were branded as a warning to un-vaccinated survivors. Key people needed to rebuild society are protected from disease and beasts inside a fortress-like wall. But Fiona has awakened branded, alone—and on the wrong side of the wall . . . The Structuring of Organizations Henry Mintzberg 1979 How do organizations structure themselves? A synthesis of the empirical literature in the field, supported by numerous examples and illustrations, provides images that produce a theory. The author introduces five basic configurations of structure - the simple structure, the machine bureaucracy, the professional bureaucracy, the divisionalized form, and the adhocracy. This book reveals that structure seems to be at the root of many questions about organizations and why they function as they do.

Community, Scale, and Regional Governance Liesbet Hooghe 2016 This is the second of five volumes theorizing the structure of governance above and below the central state. This book is written for those interested in the character, causes, and consequences of governance within the state. The book argues that jurisdictional design is shaped by functional and communal pressures. Functional pressures arise from the character of the public goods provided by government: their scale economies, externalities, and informational asymmetries. However, to explain demands for self-rule one needs to understand how people think and act in relation to the communities they conceive themselves belonging. The authors demonstrate: the scale and community explain basic features of governance, including the growth of multiple tiers over the past six decades; how jurisdictions are designed; why governance within the state has become differentiated; and the extent to which regions exert authority. -- book jacket.

Handbook of Rubber Bonding Bryan G. Crowther 2001 Annotation. Many books and papers have been published on adhesion of materials in general but the topics covered by this book have been selected to cover a wide range of interests, both in terms of products and applications. Although there is some discussion of relevant theory in various sections of d104, the emphasis in this volume has been to concentrate on the practicalities of bonding of rubbers, to themselves and substrates. It is considered that this type of information is of immediate interest to the practising technologist dealing with shop floor problems on a daily basis.
