[Countries South of the Caucasus in Medieval Maps](#) Rouben Galichian 2007 The present volume is the result of his studies and research on medieval western and Islamic maps of the region south of the Caucasus. During the first decade of the twenty first century the European Union began implementing a program entitled "European Neighbourhood Policy". Through this program the EU has been trying to create a "Ring of Friends", who could be reliable and friendly neighbours at all times. This book is aiming to inform the western reader about the history and geography of three countries lying south of the Caucasus, which may soon become part of these neighbours. The book is a study of maps made during the years 350 to 1350, thus providing an important window looking into the geopolitics of this area. The maps depicted and discussed in the book come from the medieval western religious and non-religious sources, Islamic, as well as rare Syriac and Armenian medieval manuscripts. The originals of these maps are kept in various well-known libraries and museums and occupy important places in our cartographic heritage. The very existence of all these images collected and displayed in a single volume represents a rare and enjoyable sight

**Saint Paul** Pope Benedict XVI 2012-10-24 St. Paul is one of the most important figures in Christian history. As Saul of Tarsus he vigorously persecuted Christianity, even collaborating in the death of Christianity's first martyr, Stephen. His encounter with the resurrected Jesus on the road to Damascus changed Paul's life, the Christian Church, and world history. More than anyone else in the early Church, Paul saw the universal nature of the Christian message. He became the "Apostle to the Gentiles" and the

"Teacher of the Nations". As the human author of half of the New Testament, Paul is a figure who cannot be overlooked by anyone who wants to understand Jesus Christ and Christianity. In this book, Pope Benedict XVI, a profound spiritual leader in his own right and a first-rate theologian and Bible commentator, explores the legacy of Paul. Pope Benedict follows the course of the Apostle's life, including his missionary journeys and his relationship with the other apostles of Jesus such as St. Peter and St. James, and Paul's martyrdom in Rome. Benedict also examines such questions as: Did Paul know Jesus during his earthly life and how much of Jesus' teaching and ministry did he know of? Did Paul distort the teachings of Jesus? What role did Jesus' death and resurrection play in Paul's teaching? What are we to make of Paul's teaching about the end of the world? What does Paul's teaching say about the differences between Catholic and Protestant Christians over salvation and the roles of faith and works in the Christian life? How have modern Catholic and Protestant scholars come together in their understanding of Paul? What does Paul have to teach us today about living a spiritual life? These and other important issues are addressed in this masterful, inspirational, and highly-readable presentation of St. Paul and his writings by one of today's great spiritual teachers, Pope Benedict XVI. "The Apostle Paul, an outstanding and almost inimitable yet stimulating figure, stands before us as an example of total dedication to the Lord and to his Church, as well as of great openness to humanity and its cultures."  
—Pope Benedict XVI

**The Nutrition of the Rabbit** Carlos de Blas 1998 Rabbit production systems are important providers of meat in many parts of the world. The species has many advantages, including rapid growth rate and good reproductive performance. It is adaptable in that it may be reared under intensive conditions, but is also successful under small scale production systems, which are of considerable value in the economics of emerging countries. Although not a ruminant, its digestive system allows it to thrive on high fiber raw materials. The meat has a comparatively healthy low fat image, which is increasingly important to consumers and there appear to be few impediments, such as religious considerations, to rabbit meat consumption. However, the science of rabbit production has received relatively little attention, although there are recognized rabbit research groups worldwide and a wealth of data exists in a scattered form in the literature. This book brings together that expertise under one cover. It covers a range of topics, from digestive physiology and nutrient/energy allowances to feed formulation and production. The information provided will be an invaluable asset to those involved in rabbit rearing, whether as companion animals or for meat production, and will also provide data of considerable interest to animal nutritionists and zoologists working on rabbits and related mammals.
