Hand to Eye Angus Hyland 2003-12-23 A sequel to the highly successful Pen & Mouse, Hand to Eye features forty-five illustrators from around the world. Including both commissioned artwork and experimental projects, the work collected here shows that cutting-edge computer illustration is still thriving and continues to push boundaries. In the last two years, however, there has been a noticeable move towards a handcrafted style, perhaps a logical reaction to the torrent of digital imagery. More and more image-makers are turning to traditional tools and techniques, and their methods vary widely: some work solely with pen, pencil and paint; others create images using tapestry and embroidery, and many incorporate digital elements into handmade art. Hand to Eye reflects these diverse approaches to image-making, from the cleanness of slick, vector-based work, through photorealism, to a lo-fi, handcrafted aesthetic; from exquisitely detailed, brightly coloured collages to simple, single-colour sketches.

150 ECG Problems E-Book John Hampton 2013-07-24 This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of ECG Made Easy and ECG in Practice for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

BiSL® - A Framework for Business Information Management – 2nd edition Remko van der Pols & Frank van Outvorst & Ralph Donatz 2012-04-15 This book describes a process framework for business information management: the Business Information Services Library (BiSL®) – a public domain standard that is consistent with the IT Infrastructure Library (ITIL) and Application Services Library (ASL). BiSL establishes a bridge between IT and business processes, and between business information administrators and information managers. The BiSL process model provides an insight into all of the primary processes within their field of operations and into the relationship between the various processes. It offers a starting point for the improvement of these processes using best practices, amongst other things, and it provides uniform terminology. This book explains BiSL, a process framework for business information management, encompassing the best way to manage and execute business information management in day-to-day practice, and explains how the framework BiSL can help to improve business processes and the alignment of business and IT. Making Sense of Children's Drawings John Willats 2006-04-21 The message of this book is a simple one: children learn to draw by acquiring increasingly complex and effective drawing rules. In this regard, learning to draw is like learning a language, and as with language children use these rules creatively, making infinite use of finite means. Learning to draw is thus, like learning a language, one of the major achievements of the human mind. Theories of perception developed in the second half of the 20th century enable us to construct a new theory of children's drawings that can account for their many strange features. Earlier accounts contained valuable insights, but recent advances in the fields of language, vision, philosophy, and artificial intelligence now make it possible to resolve the many contradictions and confusions inherent in these early writings. John Willats has written a book that is accessible to psychologists, artists, primary and junior schoolteachers, and parents of both gifted and normal children.
