Daring to Care Susan Gelfand Malka 2022-08-15 Beginning in the 1960s, second-wave feminism inspired and influenced dramatic changes in the nursing profession. Susan Gelfand Malka argues that feminism helped end nursing's subordination to medicine and provided nurses with greater autonomy and professional status. She discusses two distinct eras in nursing history. The first extended from the mid-1960s to the mid-1980s, when feminism seemed to belittle the occupation in its analysis of gender subordination but also fueled nursing leaders' drive for greater authority and independence. The second era began in the mid-1980s, when feminism grounded in the ethics of care appealed to a much broader group of caregivers and was incorporated into nursing education. While nurses accepted aspects of feminism, they did not necessarily identify as feminists. Nonetheless, they used, passed on, and developed feminist ideas that brought about nursing school curricula changes and the increase in self-directed and specialized roles available to caregivers in the twenty-first century.

Encyclopedia of Nursing Education Mary Jane Smith 2015-02-20 Written by luminaries in the field of nursing education, this is the only current and comprehensive compendium of important topics in nursing education. It contains more than 175 detailed entries, and will be a valuable reference text for doctoral- and master's-level nursing students, nursing faculty, university and hospital libraries worldwide, and hospital nursing departments and schools. The listing of entries has been carefully culled from recent nursing literature and six volumes of the Annual Review of Nursing Education. Each entry follows a standard template that includes definition, application in nursing education, a synopsis including a brief

summary of what is in the literature on the topic, and a concluding summary discussing future development in nursing education. Listings are alphabetized for easy access, and are accompanied by a comprehensive reference list. KEY FEATURES: The only current compendium of important topics in nursing education Includes all topics relevant to nursing education based on a review of the literature Alphabetized and consistently formatted for easy access to information Includes comprehensive reference lists per topic Written by expert nurse educators A listing of teaching topics compiled by the editors is available to instructors

*Nurse Educator Core Competencies* World Health Organization 2017-06 The World Health Organization has developed these Nurse Educator Core Competencies to enable educators to effectively contribute to the attainment of high quality education, and the production of effective, efficient and skilled nurses who are able to respond to the health needs of the populations they serve. This will enable the attainment of objectives one and two of the Global strategy on human resources for health: Workforce 2030 and is also a priority in the updated Global strategic directions on nursing and midwifery 2016-2020. The aim of this publication is to provide a clear outline of Nurse Educator Core Competencies and performance expectations, which can form the basis for developing a competence-based curriculum encompassing the cognitive, affective and psychomotor skills and behaviors expected of nurse teachers. The competencies are intended to help guide the educational preparation of nurse teachers; ensure educational quality and accountability; and, ultimately, contribute to improving the provision of nursing care and outcomes of health services. Much effort has gone into the preparation of the Nurse Educator Core Competencies. It is the aim of the World Health Organization that they will facilitate nurse educators to attain increased proficiency in assisting student nurses to acquire all the knowledge, skills and attitudes necessary to practice nursing effectively in the 21st century.

**Quality Caring in Nursing** Dr. Joanne R. Duffy, PhD, RN, FAAN 2008-12-15 Winner of an AJN Book of the Year Award for 2009! "[This] book offers a coherent, theoretical, and research-guided framework for quality nursing caring in practice, education, and leadership; a foundational, timeless, yet transformative framework of substance." Jean Watson, PhD, RN, AHN-BC, FAAN College of Nursing, University of Colorado, Denver Dedicated time spent with patients and families in clinical settings is often limited,

rushed, and impersonal. How can nurses develop more positive, caring relationships with their patients, and help to improve the quality of patient care at large? This book addresses this critical question by presenting Joanne R. Duffy's Quality-Caring Model®-the result of 35 years of clinical experience and educational acumen. This values-based model will bring caring back into the foreground of nursing practice by providing revised curricula for educational programs, and outlining the core caring principles for nurse administrators. Key Features: Establishes "Relationship-Centered Caring," with discussions on how to care for the self, patients and families, each other, and communities Offers multiple case examples, and includes reflective questions and applications for use in educational programs, workshops, conferences, and clinical practice Demonstrates how the Quality-Caring Model® can be implemented in clinical practice, nursing education, research, and nursing leadership settings Includes appendices that discuss how caring can improve patient safety, outline course objectives, and explain how to assess and measure caring in your facility Written in clear, accessible language, this book will be an invaluable resource to nursing students, nursing scholars, clinical nurses, nurse educators, nurse researchers, and nurse leaders. Duffy's approach will help create a redesigned patient care delivery system focused on the primacy of caring relationships.

The Quick-Reference Chart offers readers at-a-glance school comparisons.

**Eating Disorders and Obesity** Phillipa Hay 2019-05-27 Eating Disorders have traditionally been considered apart from public health concerns about increasing obesity. It is evident that these problems are, however, related in important ways. Comorbid obesity and eating disorder is increasing at a faster rate than either obesity or eating disorders alone and one in five people with obesity also presents with an Eating Disorder, commonly but not limited to Binge Eating Disorder. New disorders have emerged such as normal weight or Atypical Anorexia Nervosa. However research and practice too often occurs in parallel with a failure to understand the weight disorder spectrum and consequences of co-morbidity that then contributes to poorer outcomes for people living with a larger size and an Eating Disorder. Urgently needed are trials that will inform more effective assessment, treatment and care where body size and eating disorder symptoms are both key to the research question.

**Measurement in Nursing and Health Research** Dr. Carolyn F. Waltz, PhD, RN, FAAN 2010-04-17 Designated a Doody's Core Title! "This is a valuable resource for readers seeking basic to advanced information on measurement. *Evaluation and Testing in Nursing Education* Marilyn H. Oermann, PhD, RN, FAAN 2009-05-18

Designated a Doody's Core Title and Essential Purchase! "Without question, this book should be on every nurse educator's bookshelf, or at least available through the library or nursing program office. Certainly, all

graduate students studying to be nurse educators should have a copy." --Nursing Education Perspectives

"This [third edition] is an invaluable resource for theoretical and practical application of evaluation and testing of clinical nursing students. Graduate students and veteran nurses preparing for their roles as nurse educators will want to add this book to their library." Score: 93, 4 stars --Doody's "This 3rd edition. . .has again given us philosophical, theoretical and social/ethical frameworks for understanding assessment and measurement, as well as fundamental knowledge to develop evaluation tools for individual students and academic programs." -Nancy F. Langston, PhD, RN, FAAN Dean and Professor Virginia Commonwealth University School of Nursing All teachers need to assess learning. But often, teachers are not well prepared to carry out the tasks related to evaluation and testing. This third edition of Evaluation and Testing in Nursing Education serves as an authoritative resource for teachers in nursing education programs and health care agencies. Graduate students preparing for their roles as nurse educators will also want to add this book to their collection. As an inspiring, award-winning title, this book presents a comprehensive list of all the tools required to measure students' classroom and clinical performance. The newly revised edition sets forth expanded coverage on essential concepts of evaluation, measurement, and testing in nursing education; quality standards of effective measurement instruments; how to write all types of test items and establish clinical performance parameters and benchmarks; and how to evaluate critical thinking in written assignments and clinical performance. Special features: The steps involved in test construction, with guidelines on how to develop test length, test difficulty, item formats, and scoring procedures Guidelines for assembling and administering a test, including design rules and suggestions for reproducing the test Strategies for writing multiple-choice and multiple-response items How to develop test items that prepare students for licensure and certification examinations Like its popular predecessors, this text offers a seamless blending of theoretical and practical insight on evaluation and testing in nursing education, thus serving as an invaluable resource for both educators and students.

**Priority Areas for National Action** Institute of Medicine 2003-04-10 A new release in the Quality Chasm Series, Priority Areas for National Action recommends a set of 20 priority areas that the U.S. Department

of Health and Human Services and other groups in the public and private sectors should focus on to improve the quality of health care delivered to all Americans. The priority areas selected represent the entire spectrum of health care from preventive care to end of life care. They also touch on all age groups, health care settings and health care providers. Collective action in these areas could help transform the entire health care system. In addition, the report identifies criteria and delineates a process that DHHS may adopt to determine future priority areas.

**Qualitative Research in Nursing** Helen Streubert Speziale 2011 "Qualitative Research in Nursing is a user-friendly text that systematically provides a sound foundation for understanding a wide range of qualitative research methodologies, including triangulation. It approaches nursing education, administration, and practice and gives step-by-step details to instruct students on how to implement each approach. Features include emphasis on ethical considerations and methodological triangulation, instrument development and software usage; critiquing guidelines and questions to ask when evaluating aspects of published research; and tables of published research that offer resources for further reading"--Provided by publisher.

**Assessing Progress on the Institute of Medicine Report The Future of Nursing** National Academies of Sciences, Engineering, and Medicine 2016-03-22 Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a

wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report *The Future of Nursing: Leading Change, Advancing Health*, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP *Future of Nursing: Campaign for Action* and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

**Gerontological Nursing: Competencies for Care** Kristen L. Mauk 2010-10-25 Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. *Gerontological Nursing: Competencies for Care, Second Edition* is a comprehensive and student-accessible text that offers a holistic and inter-disciplinary approach to caring for the elderly. The framework for the text is built around the Core Competencies set forth by the American Association of Colleges of Nursing (AACN) and the John A. Hartford Foundation Institute for Geriatric Nursing. Building upon their knowledge in prior medical surgical courses, this text gives students the skills and theory needed to provide outstanding care for the growing elderly population. It is the first of its kind to have more than 40 contributing authors from many different disciplines. Some of the key features include chapter outlines, learning objectives, discussion questions, personal reflection boxes, and case studies.

### **Barron's Profiles of American Colleges 1997**

**The Future of Nursing** Institute of Medicine 2011-02-08 *The Future of Nursing* explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership

roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

*Nursing Staff in Hospitals and Nursing Homes* Committee on the Adequacy of Nursing Staff in Hospitals and Nursing Homes 1996-04-10 *Hospitals and nursing homes* are responding to changes in the health care system by modifying staffing levels and the mix of nursing personnel. But do these changes endanger the quality of patient care? Do nursing staff suffer increased rates of injury, illness, or stress because of changing workplace demands? These questions are addressed in *Nursing Staff in Hospitals and Nursing Homes*, a thorough and authoritative look at today's health care system that also takes a long-term view of staffing needs for nursing as the nation moves into the next century. The committee draws fundamental conclusions about the evolving role of nurses in hospitals and nursing homes and presents recommendations about staffing decisions, nursing training, measurement of quality, reimbursement, and other areas. The volume also discusses work-related injuries, violence toward and abuse of nursing staffs, and stress among nursing personnel--and examines whether these problems are related to staffing levels. Included is a readable overview of the underlying trends in health care that have given rise to urgent questions about nurse staffing: population changes, budget pressures, and the

introduction of new technologies. *Nursing Staff in Hospitals and Nursing Homes* provides a straightforward examination of complex and sensitive issues surround the role and value of nursing on our health care system.

Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes

Institute of Medicine 2016-01-15 Interprofessional teamwork and collaborative practice are emerging as key elements of efficient and productive work in promoting health and treating patients. The vision for these collaborations is one where different health and/or social professionals share a team identity and work closely together to solve problems and improve delivery of care. Although the value of interprofessional education (IPE) has been embraced around the world - particularly for its impact on learning - many in leadership positions have questioned how IPE affects patient, population, and health system outcomes. This question cannot be fully answered without well-designed studies, and these studies cannot be conducted without an understanding of the methods and measurements needed to conduct such an analysis. This Institute of Medicine report examines ways to measure the impacts of IPE on collaborative practice and health and system outcomes. According to this report, it is possible to link the learning process with downstream person or population directed outcomes through thoughtful, well-designed studies of the association between IPE and collaborative behavior. *Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes* describes the research needed to strengthen the evidence base for IPE outcomes. Additionally, this report presents a conceptual model for evaluating IPE that could be adapted to particular settings in which it is applied. *Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes* addresses the current lack of broadly applicable measures of collaborative behavior and makes recommendations for resource commitments from interprofessional stakeholders, funders, and policy makers to advance the study of IPE.

Dorothea Orem Donna Hartweg 1991-09-11 Encapsulating the work of a classic nursing theorist, this book provides a unique overview of Orem's Self-Care Deficit Model of Nursing. Orem's Model proposes that nursing should be especially concerned with the patient's need to move continuously towards responsible action in self-care in order to sustain life and health or to recover from disease or injury. The actions required of nurses to achieve these goals are clearly described.
