Unholy Empire D. Brian Shafer 2002-11-10 The prophetic clock is ticking. Lucifer and his army of 'imps' search frantically for the prophetic "Seed of the woman". The memory of God's promise that this seed would rise up and crush the serpent's head stirs them to shadowy demonic activity. Unholy Empire chronicles the duel between God and the fallen angels as both focus their attention on the Seed. The devils watch for any and every sign of the Seed in an all out effort to stop, delay, compromise, or otherwise destroy this impending prophetic nightmare. If they fail they are all doomed. The second book in the "Chronicles of the Host Series", Unholy Empire uncovers the major themes covering the Seed and the people of covenant as well as Lucifer's all-out war against them. It sheds new light on dramatic encounters between Cain and Abel, Moses and Pharaoh, David and Goliath, and others.

The Green Braid Kim Tanzer 2007-04-11 This volume presents the discipline's best thinking on sustainability in written, drawn, and built form, drawing on over fifteen years of peer-reviewed essays

and national design awards published by the Association of Collegiate Schools of Architecture (ACSA). Providing a primer on sustainability, useful to teachers and students alike, the selected essays address a broad range of issues. Combined with design projects that highlight issues holistically, they promote an understanding of the principles of sustainability and further the integration of sustainable methods into architectural projects. Using essays that alternately revise and clarify twentieth century architectural thinking, *The Green Braid* places sustainability at the centre of excellent architectural design. No other volume addresses sustainability within the context of architectural history, theory, pedagogy and design, making this book an ideal source for architects in framing their practices, and therefore their architectural production, in a sustainable manner.

The Sustainable Tall Building Philip Oldfield 2019-03-27 *The Sustainable Tall Building: A Design Primer* is an accessible and highly illustrated guide, which primes those involved in the design and research of tall buildings to dramatically improve their performance. Using a mixture of original research and analysis, best-practice design thinking and a detailed look at exemplar case studies, author Philip Oldfield takes the reader through the architectural ideas, engineering strategies and cutting-edge technologies that are available to the tall building design team. The book takes a global perspective, examining high-rise design in different climates, cultures and contexts. It considers common functions such as high-rise housing and offices, to more radical designs such as vertical farming and vertical cemeteries. Innovation is provided by examining not only the environmental performance of tall buildings but also their social sustainability, guiding the reader through strategies to create successful communities at height. The book starts by critically appraising the sustainability of tall building architecture past and present, before demonstrating innovative ways for future tall buildings to be designed. These include themes such as climatically responsive architecture, siting a tall building in the city, zero-carbon towers, skygardens and community spaces at height, sustainable structural systems and novel façades. In doing so, the book provides essential reading for architects, engineers, consultants, developers, researchers and students engaged with sustainable design and high-rise architecture.

Dinosaur Eggs Dinosaur Names Dinosaur Diet Feathered Dinosaurs Plant Eating Dinosaurs The Weirdest Dinosaurs The Deadliest Dinosaurs Flying Dinosaurs Kinds of Dinosaurs The Biggest Dinosaurs The Smallest Dinosaurs Author Bio Publisher Introduction We are going to go on a journey back to the age of the dinosaurs to check out one of the strangest dinosaurs to ever have existed. That dinosaur is the Carnotaurus. The Carnotaurus is called a Carnotaur for short. The Carnotaurus was a strange creature because of the peculiar horns which grew from the top of its head and because of the many distinct characteristics it possesses that other similar dinosaurs did not have. For instance the Carnotaur was a lightly built predator whereas the t-rex was a large, bulking and heavy set predator even though both predators have tiny arms and walked on two legs. We are going to check out the reasons why the Carnotaur had the horns it had and we are going to check out all of its other nifty characteristics. It should be noted though that to appreciate dinosaurs properly, it takes more than just fossils and facts. One really has to have genuine wonder and interest in what the dinosaurs were- and this takes a bit of imagination. One really needs to understand that the dinosaurs were amazing creatures which came in all shapes and sizes and which really probably never exist again. That means we have to make images in our mind about how the dinosaurs looked, how they acted, and even how they smelled and what they sounded like. When you really imagine what the dinosaurs were you start to experience wonder and awe about just how mysterious and cool nature and earth really are. Now let's take a step back in time and walk with the dinosaurs!

A Visual Approach to the Study of Religious Orders Marcin Jewdokimow 2019-05-23 A Visual Approach to the Study of Religious Orders applies visual methods to the exploration of various facets of religious life, such as everyday lived experience, contemporary monastic identity or monastic architecture. Presenting a series of visual essays, it treats images not as simple illustrations but as an autonomous form of expression, capable of unveiling vital and developmental layers of experience, while inviting readers to examine and interpret the data themselves. The first book of its kind, it brings together case studies from various locations across Europe to demonstrate what the use of visual methodologies can contribute to social scientific research on religious orders. As such, it will appeal to scholars and students of sociology, religious studies and theology and anyone with interests in religious orders.

Green Architecture James Wines 2008 ARCHITECTURAL STRUCTURE & DESIGN. When is a house ecological? Does the use of natural materials and solar cells on the roof make a building an example of "green" architecture? Perhaps even Antoni Gaudi and Frank Lloyd Wright designed "greener" buildings than most contemporary architects, whose low-energy houses scarcely differ outwardly from traditional ones. James Wines puts up the various - and often irreconcilable - concepts of environmentally-friendly architecture for discussion, making a case for an architecture that not only focuses on technological solutions, but also tries to reconcile man and nature in its formal idiom. Among the examples of contemporary ecological architecture presented are works by Emilio Ambasz, Gustav Peichl, Arthur Quarmby, Jean Nouvel, Sim Van der Ryn, Jourda and Perraudin, Log ID, James Cutler, Stanley Saitowitz, Francois Roche, Nigel Coates and Michael Sorkin.
