Organic Gardening for Everyone CaliKim 2019-12-24 If you want to grow healthy vegetables at home, but have hesitated because it seems too hard and time consuming, *Organic Gardening for Everyone* is your perfect hands-on guide—an “if I can do it, you can do it” case study that addresses your concerns and gets you started. Loaded with practical advice and step-by-step guidance, *Organic Gardening for Everyone* takes a very personal and friendly approach to a subject that can be intimidating. It is a first-class primer on organic vegetable gardening, and an inspirational story about how anyone can balance the rigors of gardening with the demands of a modern, family-oriented lifestyle. In 2012, a California mom decided to start an organic vegetable garden. But she went about it in an unusual way: she crowdsourced it by launching a YouTube channel under the name "CaliKim" and asking for help. And then she started planting. As questions came up, she turned to her viewers and subscribers and they replied with answers and advice. As she learned, her garden grew successfully—even in the hot, harsh California climate. Her expertise also grew, and now she answers many more questions than she asks and has become a very accomplished home gardener. And CaliKim has a great story to tell: growing healthy organic vegetables for your family is not difficult, even for today's time-challenged lifestyles. She provides complete step-by-step information on growing the most popular edibles organically, and also gives sound advice on how to take on the challenges of balancing a hectic lifestyle with successful growing—and how to involve the whole family in the process. You'll be rewarded for your effort every time you place a plate of natural, organic vegetables on the family dinner table knowing exactly what they are, what is in them, and where they came from.

Growing Perennial Foods Acadia Tucker 2019-02-15 Acadia Tucker's long love affair with perennial foods has produced this easy-to-understand guide to growing and harvesting them. A regenerative farmer who is deeply concerned about global warming, Tucker believes there may be no better time to plant these hardy crops. Perennials can weather climate extremes, promote healthy soil, mitigate drought conditions, and thrive without chemical fertilizers and pesticides. Many can be harvested year round. They taste good, pack lots of nutrients, and require little tending. In short, the world is a better place with more perennials in it and this book intends to get us there. Tucker inspires action by first laying the groundwork for tending an organic, regenerative garden. She highlights the 10 steps she recommends gardeners take to help perennial foods thrive. But most of the book is dedicated to profiles of popular perennial herbs, fruit, and vegetables, with explicit instructions on how to plant, grow, and harvest them. Tucker also offers suggestions on how to store and preserve perennials. *Growing Perennial Foods* is illustrated with dozens of pen & ink drawings and ends with a short chapter on frequently asked questions. And since this is a field guide, each profile gives readers enough space to write in any additional notes. While designed for gardening novices, this book is also for experienced gardeners who want to grow more resilient crops, and could use a little guidance. *Growing Perennial Foods* is part of our Growing Food book series and a companion guide to *Growing Good Food: A Citizen's Guide to Backyard Carbon Farming*, which is also written by Acadia Tucker and set to publish in early 2019.

Organic Manifesto Maria Rodale 2011-03-01 Drawing on findings from leading health researchers as well as conversations with both chemical and organic farmers from coast to coast, Maria Rodale's Organic Manifesto irrefutably outlines the unacceptably high cost of chemical farming on our health and our environment. She traces the genesis of chemical farming and the rise of the immense companies that profit from it, bringing to light the government's role in allowing such practices to flourish. She further explains that modern organic farming would not only help reverse climate change by reducing harmful carbon emissions and soil depletion, but would also improve the quality of the food we eat, reduce diseases from asthma to cancer, and ensure a better quality of life in farming communities nationwide. For every parent wondering how best to safeguard the health and safety of her children; for every environmentalist in search of a solution to the worsening crisis that afflicts our land, air, and waters; for every shopper who questions whether it is worth it to pay more for organic, Maria Rodale offers straightforward answers and a single, definitive course of action: We must demand organic now.

Gardening With Sprouts Daniel A. Atlas 2009 Joe Cynikowski is a fifty-five-year old cynical, Republican conservative who is an investigator for the U.S. Navy. He meets thirty-year-old Frank Goodman, a liberal Jewish post graduate student in a Tempe, Arizona bar. Frank is trying to write a thesis for his doctorate degree in philosophy and has chosen "Cynicism" as his topic. Frank and Joe begin bantering about the current social climate in America and they discuss the views of conservatives, liberals, and the effects of media slants. Frank convinces a reluctant Joe to ride along with him on his business trip to continue the discussion. During the trip, they rescue a battered woman from her violent husband and with the help of the Border Patrol, they save a young Mexican illegal immigrant whose parents have been kidnapped by Mexican coyote slavers. The story contains severe criticisms by Joe about the ethical and moral decay in America, and discusses bigotry, racism, and religion. Joe explains the reasons for his cynicism and Frank counters with a liberal, more positive view. They team up together to do a few good deeds by helping those in distress and hope that their actions will make things better in some small way. It is a story with a powerful message. Certain passages might offend some readers, even though they tend toward moral conclusions.
