Why Did Europe Conquer the World? Philip T. Hoffman 2017-01-24 The startling economic and political answers behind Europe's historical dominance Between 1492 and 1914, Europeans conquered 84 percent of the globe. But why did Europe establish global dominance, when for centuries the Chinese, Japanese, Ottomans, and South Asians were far more advanced? In Why Did Europe Conquer the World?, Philip Hoffman demonstrates that conventional explanations—such as geography, epidemic disease, and the Industrial Revolution—fail to provide answers. Arguing instead for the pivotal role of economic and political history, Hoffman shows that if certain variables had been different, Europe would have been eclipsed, and another power could have become master of the world. Hoffman sheds light on the two millennia of economic, political, and historical changes that set European states on a distinctive path of development, military rivalry, and war. This resulted in astonishingly rapid growth in Europe's military sector, and produced an insurmountable lead in gunpowder technology. The consequences determined which states established colonial empires or ran the slave trade, and even which economies were the first to industrialize. Debunking traditional arguments, Why Did Europe Conquer the World? reveals the startling reasons behind Europe's historic global supremacy.

Guns, Germs, and Steel Jared Diamond 2017-03-07 Winner of the Pulitzer Prize • New York Times Bestseller • Over Two Million Copies Sold “One of the most significant projects embarked upon by any intellectual of our generation” (Gregg Easterbrook, New York Times), **Guns, Germs, and Steel** presents a groundbreaking, unified narrative of human history. Why did Eurasians conquer, displace, or decimate Native Americans, Australians, and Africans, instead of the reverse? In this “artful, informative, and delightful” (William H. McNeill, New York Review of Books) book, a classic of our time, evolutionary biologist Jared Diamond dismantles racist theories of human history by revealing the environmental factors actually responsible for its broadest patterns. The story begins 13,000 years ago, when Stone Age hunter-gatherers constituted the entire human population. Around that time, the developmental paths of human societies on different continents began to diverge greatly. Early domestication of wild plants and animals in the Fertile Crescent, China, Mesoamerica, the Andes, and other areas gave peoples of those regions a head start at a new way of life. But the localized origins of farming and herding proved to be only part of the explanation for their differing fates. The unequal rates at which food production spread from those initial centers were influenced by other features of climate and geography, including the disparate sizes, locations, and even shapes of the continents. Only societies that moved away from the hunter-gatherer stage went on to develop writing, technology,

government, and organized religions as well as deadly germs and potent weapons of war. It was those societies, adventuring on sea and land, that invaded others, decimating native inhabitants through slaughter and the spread of disease. A major landmark in our understanding of human societies, *Guns, Germs, and Steel* chronicles the way in which the modern world, and its inequalities, came to be.

Moriori Michael King 2017-05-01 'A book to be treasured for the access it gives us to a little-known corner of the New Zealand experience.' Tipene O'Regan, Evening Post This award-winning, trail-blazing book by Michael King restored the Moriori of the Chatham Islands to their rightful place in New Zealand, Pacific and world history. This revised edition contains material that has come to light since first publication. 'King has set the record straight in a richly readable and often moving account of a long ignored sideshow to the history of our country.' Gordon McLauchlan, National Business Review 'It is authoritative but it is also popular history in the best sense, and that is precisely what is needed to clear away the brambles of racial prejudice and historical error which have all but overwhelmed the subject in the past.' Atholl Anderson, Otago Daily Times 'This book decisively strips away all the muddle . . . a clear, thoroughly readable and honest history of the Moriori.' Judith Binney, Sunday Star 'A timely book which must be read so that we will all know more about ourselves and about us as a nation.' Hirini Moko Mead, Dominion

Guns, Germs and Steel Jared M. Diamond 1998 This book answers the most obvious, the most important, yet the most difficult question about human history: why history unfolded so differently on different continents. Geography and biography, not race, moulded the contrasting fates of Europeans, Asians

The Rise of the West William H. McNeill 2009-07-30 *The Rise of the West*, winner of the National Book Award for history in 1964, is famous for its ambitious scope and intellectual rigor. In it, McNeill challenges the Spengler-Toynbee view that a number of separate civilizations pursued essentially independent careers, and argues instead that human cultures interacted at every stage of their history. The author suggests that from the Neolithic beginnings of grain agriculture to the present major social changes in all parts of the world were triggered by new or newly important foreign stimuli, and he presents a persuasive narrative of world history to support this claim. In a retrospective essay titled "The Rise of the West after Twenty-five Years," McNeill shows how his book was shaped by the time and place in which it was written (1954-63). He discusses how historiography subsequently developed and suggests how his portrait of the world's past in *The Rise of the West* should be revised to reflect these changes. "This is not only the most learned and the most intelligent, it is also the most stimulating and fascinating book that has ever set out to recount and explain the whole history of mankind. . . . To read it is a great experience. It leaves echoes to reverberate, and seeds to germinate in the mind."—H. R. Trevor-Roper, New York Times Book Review

The History of the Ancient World: From the Earliest Accounts to the Fall of Rome Susan Wise Bauer 2007-03-17 A lively and engaging narrative history showing the common threads in the cultures that gave birth to our own. This is the first volume in a bold new series that tells the stories of all peoples, connecting historical events from Europe to the Middle East to the far coast of China, while still giving weight to the characteristics of each country. Susan Wise Bauer provides both sweeping scope and vivid attention to the individual lives that give flesh to abstract assertions about human history. Dozens of maps provide a clear geography of great events, while timelines give the reader an ongoing sense of the passage of years and cultural interconnection. This old-fashioned narrative history employs the methods of "history from beneath"—literature, epic traditions, private letters and accounts—to connect kings and leaders with the lives of those they ruled. The result is an engrossing

tapestry of human behavior from which we may draw conclusions about the direction of world events and the causes behind them.

Prehistoric Hunters of the High Plains George C. Frison 1991 The Northwestern Plains is developing a unique and viable archeology, offering students choosing their future research topics in this exciting time a variety of possibilities. The entire area of the Northwestern Plains--mountains, foothills, and plains--has been a testing ground for human ingenuity. It provides an unusual opportunity to study more than 11,000 years of prehistoric hunting and gathering. *Prehistoric Hunters of the High Plains* synthesizes what was a disparate body of data on the prehistory of the Northwestern Plains and presents it in rational and understandable terms. Key Features * Examines the prehistoric cultural chronology and the sources of the data for the Northwestern High Plains * Presents prehistoric hunting and gathering subsistence strategies for the Northwestern High Plains * Takes an interdisciplinary approach to the study of archaeology using the data from geology, soils, faunal analysis, pollen, and phytolith studies * Provides a methodology for data recovery

Conquests and Cultures Thomas Sowell 2008-08-01 This book is the culmination of 15 years of research and travels that have taken the author completely around the world twice, as well as on other travels in the Mediterranean, the Baltic, and around the Pacific rim. Its purpose has been to try to understand the role of cultural differences within nations and between nations, today and over centuries of history, in shaping the economic and social fates of peoples and of whole civilizations. Focusing on four major cultural areas(that of the British, the Africans (including the African diaspora), the Slavs of Eastern Europe, and the indigenous peoples of the Western Hemisphere--*Conquests and Cultures* reveals patterns that encompass not only these peoples but others and help explain the role of cultural evolution in economic, social, and political development.

An Analysis of Jared Diamond's Guns, Germs & Steel Riley Quinn 2017-07-05 In his 1997 work *Guns, Germs and Steel*, Jared Diamond marshals evidence from five continents and across 13,000 years of human history in an attempt to answer the question of why that history unfolded so differently in various parts of the globe. His results offer new explanations for why the unequal divisions of power and wealth so familiar to us today came into existence - and have persisted. Balancing materials drawn from a vast range of sources, addressing core problems that have fascinated historians, anthropologists, biologists and geographers alike - and blending his analysis to create a compelling narrative that became an international best-seller and reached a broad general market - required a mastery of the critical thinking skill of reasoning that few other scholars can rival. Diamond's reasoning skills allow him to persuade his readers of the value of his interdisciplinary approach and produce well-structured arguments that keep them turning pages even as he refocuses his analysis from one disparate example to another. Diamond adds to that a spectacular ability to grasp the meaning of the available evidence produced by scholars in those widely different disciplines - making *Guns, Germs and Steel* equally valuable as an exercise in high-level interpretation.

This short summary and analysis of *Guns, Germs, and Steel* by Jared Diamond includes: Historical context Chapter-by-chapter summaries Detailed timeline of key events Important quotes Fascinating trivia Glossary of terms Supporting material to enhance your understanding of the original work About *Guns, Germs, and Steel* by Jared Diamond: Professor Jared Diamond's informative and fascinating Pulitzer

Prize-winning *Guns, Germs, and Steel* explores a historic question: Why were the Eurasian peoples able to dominate those from other lands? Diamond argues that it was ecology and geography—not race—that shaped the modern world. Societies that developed in regions with fertile land for farming and that had domesticable plants and animals were able to progress more quickly, thereby creating the tools to conquer preliterate cultures. Drawing on a variety of disciplines—from linguistics, genetics, and epidemiology to biology, anthropology, and technology—*Guns, Germs, and Steel* offers an eloquently argued view of the development of human societies. The summary and analysis in this ebook are intended to complement your reading experience and bring you closer to a great work of nonfiction.

The Zimmermann Telegram Barbara W. Tuchman 1985-03-12 "A tremendous tale of hushed and unhushed uproars in the linked fields of war and diplomacy" (The New York Times), from the Pulitzer Prize-winning author of *The Guns of August* In January 1917, the war in Europe was, at best, a tragic standoff. Britain knew that all was lost unless the United States joined the war, but President Wilson was unshakable in his neutrality. At just this moment, a crack team of British decoders in a quiet office known as Room 40 intercepted a document that would change history. The Zimmermann telegram was a top-secret message to the president of Mexico, inviting him to join Germany and Japan in an invasion of the United States. How Britain managed to inform the American government without revealing that the German codes had been broken makes for an incredible story of espionage and intrigue as only Barbara W. Tuchman could tell it. *The Proud Tower*, *The Guns of August*, and *The Zimmermann Telegram* comprise Barbara W. Tuchman's classic histories of the First World War era.

Guns, Germs and Steel Jared Diamond 2018-03 PATTERNED PLANET: SPECIAL EDITIONS OF GROUNDBREAKING SCIENCE BOOKS Why has human history unfolded so differently across the globe? In this Pulitzer Prize-winning book, Jared Diamond puts the case that geography and biogeography, not race, moulded the contrasting fates of Europeans, Asians, Native Americans, sub-Saharan Africans, and aboriginal Australians. An ambitious synthesis of history, biology, ecology and linguistics, *Guns, Germs and Steel* remains a ground-breaking and humane work of popular science.

Wealth And Poverty Of Nations David S. Landes 2015-04-20 The history of nations is a history of haves and have-nots, and as we approach the millennium, the gap between rich and poor countries is widening. In this engrossing and important new work, eminent historian David Landes explores the complex, fascinating and often startling causes of the wealth and poverty of nations. The answers are found not only in the large forces at work in economies: geography, religion, the broad swings of politics, but also in the small surprising details. In Europe, the invention of spectacles doubled the working life of skilled craftsmen, and played a prominent role in the creation of articulated machines, and in China, the failure to adopt the clock fundamentally hindered economic development. The relief of poverty is vital to the survival of us all. As David Landes brilliantly shows, the key to future success lies in understanding the lessons the past has to teach us - lessons uniquely imparted in this groundbreaking and vital book which exemplifies narrative history at its best.

Natural Experiments of History Jared Diamond 2012-11-01 In eight case studies by leading scholars in history, archaeology, business, economics, geography, and political science, the authors showcase the “natural experiment” or “comparative method”—well-known in any science concerned with the past—on the discipline of human history. That means, according to the editors, “comparing, preferably quantitatively and aided by statistical analyses, different systems that are similar in many respects, but that differ with respect to the factors whose influence one wishes to study.” The case studies in the book support two overall conclusions about the study of human history: First, historical comparisons have the potential for yielding insights that cannot be extracted from a single case study alone. Second, insofar as is possible, when one proposes a conclusion, one may be able to strengthen one’s conclusion by gathering quantitative evidence (or at least ranking one’s outcomes from big to small), and then by testing the conclusion’s validity statistically.

The Third Chimpanzee Jared M. Diamond 2006-01-03 *The Development of an Extraordinary Species* We human beings share 98 percent of our genes with chimpanzees. Yet humans are the dominant species on the planet -- having founded civilizations and religions, developed intricate and diverse forms of communication, learned science, built cities, and created breathtaking works of art -- while chimps remain animals concerned primarily with the basic necessities of survival. What is it about that two percent difference in DNA that has created such a divergence between evolutionary cousins? In this fascinating, provocative, passionate, funny, endlessly entertaining work, renowned Pulitzer Prize-winning author and scientist Jared Diamond explores how the extraordinary human animal, in a remarkably short time, developed the capacity to rule the world . . . and the means to irrevocably destroy it.

For All the Tea in China Sarah Rose 2010-03-18 A dramatic historical narrative of the man who stole the secret of tea from China In 1848, the British East India Company, having lost its monopoly on the tea trade, engaged Robert Fortune, a Scottish gardener, botanist, and plant hunter, to make a clandestine trip into the interior of China—territory forbidden to foreigners—to steal the closely guarded secrets of tea horticulture and manufacturing. *For All the Tea in China* is the remarkable account of Fortune's journeys into China—a thrilling narrative that combines history, geography, botany, natural science, and old-fashioned adventure. Disguised in Mandarin robes, Fortune ventured deep into the country, confronting pirates, hostile climate, and his own untrustworthy men as he made his way to the epicenter of tea production, the remote Wu Yi Shan hills. One of the most daring acts of corporate espionage in history, Fortune's pursuit of China's ancient secret makes for a classic nineteenth-century adventure tale, one in which the fate of empires hinges on the feats of one extraordinary man.

Guns, Germs, and Steel Jared M. Diamond 1999 Dismantles racially based theories of human history by revealing the environmental factors he feels are responsible for history's broadest patterns.

Empires of the Weak J. C. Sharman 2020-11-10 What accounts for the rise of the state, the creation of the first global system, and the dominance of the West? The conventional answer asserts that superior technology, tactics, and institutions forged by Darwinian military competition gave Europeans a decisive advantage in war over other civilizations from 1500 onward. In contrast, *Empires of the Weak* argues that Europeans actually had no general military superiority in the early modern era. J. C. Sharman shows instead that European expansion from the late fifteenth to the late eighteenth centuries is better explained by deference to strong Asian and African polities, disease in the Americas, and maritime supremacy earned by default because local land-oriented polities were largely indifferent to war and trade at sea. Europeans were overawed by the mighty Eastern empires of the day, which pioneered key military innovations and were the greatest early modern conquerors. Against the view that the Europeans won for all time, Sharman contends that the imperialism of the late nineteenth and early twentieth centuries was a relatively transient and anomalous development in world politics that concluded with Western losses in various insurgencies. If the twenty-first century is to be dominated by non-Western powers like China, this represents a return to the norm for the modern era. Bringing a revisionist perspective to the idea that Europe ruled the world due to military dominance, *Empires of the Weak* demonstrates that the rise of the West was an exception in the prevailing world order.

Guns Germs and Steel Jared Diamond 2005-07-12 "Fascinating.... Lays a foundation for understanding human history."—Bill Gates Winner of the Pulitzer Prize, *Guns, Germs, and Steel* is a brilliant work answering the question of why the peoples of certain continents succeeded in invading other continents and conquering or displacing their peoples. This edition includes a new chapter on Japan and all-new illustrations drawn from the television series. Until around 11,000 BC, all peoples were still Stone Age hunter/gatherers. At that point, a great divide occurred in the rates that human societies evolved. In Eurasia, parts of the Americas, and Africa, farming became the prevailing mode of existence when indigenous wild plants and animals were domesticated by prehistoric planters and herders. As Jared Diamond vividly reveals, the very people who gained a head start in producing food would collide with preliterate cultures, shaping the modern world through conquest, displacement, and genocide. The paths that lead from scattered centers of food to broad bands of settlement had a great deal to do with climate and geography. But how did differences in societies arise? Why weren't native Australians, Americans, or Africans the ones to colonize Europe? Diamond dismantles pernicious racial theories tracing societal differences to biological differences. He assembles convincing evidence linking germs to domestication of animals, germs that Eurasians then spread in epidemic proportions in their voyages of discovery. In its sweep, *Guns, Germs and Steel* encompasses the rise of agriculture, technology, writing, government, and religion, providing a unifying theory of human history as intriguing as the histories of dinosaurs and glaciers.

The Selfish Gene Richard Dawkins 2016-05-26 The million copy international bestseller, critically acclaimed and translated into over 25 languages. As influential today as when it was first published, *The Selfish Gene* has become a classic exposition of evolutionary thought. Professor Dawkins articulates a gene's eye view of evolution - a view giving centre stage to these persistent units of information, and in which organisms can be seen as vehicles for their replication. This imaginative, powerful, and stylistically brilliant work not only brought the insights of Neo-Darwinism to a wide audience, but galvanized the biology community, generating much debate and stimulating whole new areas of research. Forty years later, its insights remain as relevant today as on the day it was published. This 40th anniversary edition includes a new epilogue from the author discussing the continuing relevance of these ideas in evolutionary biology today, as well as the original prefaces and foreword, and extracts from early reviews. Oxford Landmark Science books are 'must-read' classics of modern science writing which have crystallized big ideas, and shaped the way we think.

Guns, Germs, and Steel Jared M. Diamond 1998-07 Why did Eurasians conquer, displace, or decimate Native Americans, Australians, and Africans, instead of the reverse? In this groundbreaking book, evolutionary biologist Jared Diamond stunningly dismantles racially based theories of human history by revealing the environmental factors actually responsible for history's broadest patterns. Here, at last, is a world history that really is a history of all the world's peoples, a unified narrative of human life even more intriguing and important than accounts of dinosaurs and glaciers. A major advance in our understanding of human societies, *Guns, Germs, and Steel* chronicles the way that the modern world, and its inequalities, came to be. It is a work rich in dramatic revelations that will fascinate readers even as it challenges conventional wisdom.

New York Times op-ed, this memoir alternates between the examination of a working-class upbringing and a cultural analysis of the historical, psychological, and sociological sources that make up the roots of toxic masculinity and its impact on society. As progressivism changes American society, and globalism shifts labor away from traditional manufacturing, the roles that have been prescribed to men since the Industrial Revolution have been rendered obsolete. Donald Trump's campaign successfully leveraged male resentment and entitlement, and now, with Trump as president and the rise of the #MeToo movement, it's clear that our current definitions of masculinity are outdated and even dangerous. Deeply personal and thoroughly researched, the author of *The People Are Going to Rise Like the Waters Upon Your Shore* has turned his keen eye to our current crisis of masculinity using his upbringing in rural Indiana to examine the personal and societal dangers of the patriarchy. *The Man They Wanted Me to Be* examines how we teach boys what's expected of men in America, and the long-term effects of that socialization—which include depression, shorter lives, misogyny, and suicide. Sexton turns his keen eye to the establishment of the racist patriarchal structure which has favored white men, and investigates the personal and societal dangers of such outdated definitions of manhood. "By carefully and soberly examining his own story, Sexton deconstructs American life and gives many examples of how pervasive toxic masculinity is in our culture." —Henry Rollins, *Los Angeles Times* "This book is critically important to our historical moment . . . Crackles with intensity and absolutely refuses to allow the reader to look away for even a moment from the blight that toxic masculinity in America has wrought." —Nicholas Cannariato, NPR

Collapse Jared Diamond 2013-03-21 From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - *Daily Mail* 'Riveting, superb, terrifying' - *Observer* 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - *Economist* 'This book shines like all Diamond's work' - *Sunday Times*

Pandora's Seed Spencer Wells 2010-06-08 Ten thousand years ago, our species made a radical shift in its way of life: We became farmers rather than hunter-gatherers. Although this decision propelled us into the modern world, renowned geneticist and anthropologist Spencer Wells demonstrates that such a dramatic change in lifestyle had a downside that we're only now beginning to recognize. Growing grain crops ultimately made humans more sedentary and unhealthy and made the planet more crowded. The expanding population and the need to apportion limited resources created hierarchies and inequalities. Freedom of movement was replaced by a pressure to work that is the forebear of the anxiety millions feel today. Spencer Wells offers a hopeful prescription for altering a life to which we were always ill-suited. *Pandora's Seed* is an eye-opening book for anyone fascinated by the past and concerned about the future.

The World Until Yesterday Jared Diamond 2013-01-10 From the author of No.1 international bestseller *Collapse*, a mesmerizing portrait of the human past that offers profound lessons for how we can live today Visionary, prize-winning author Jared Diamond changed the way we think about the rise and fall

of human civilizations with his previous international bestsellers *Guns, Germs and Steel* and *Collapse*. Now he returns with another epic - and groundbreaking - journey into our rapidly receding past. In *The World Until Yesterday*, Diamond reveals how traditional societies around the world offer an extraordinary window onto how our ancestors lived for the majority of human history - until virtually yesterday, in evolutionary terms - and provide unique, often overlooked insights into human nature. Drawing extensively on his decades working in the jungles of Papua New Guinea, Diamond explores how tribal societies approach essential human problems, from childrearing to conflict resolution to health, and discovers we have much to learn from traditional ways of life. He unearths remarkable findings - from the reason why modern afflictions like diabetes, obesity and Alzheimer's are virtually non-existent in tribal societies to the surprising benefits of multilingualism. Panoramic in scope and thrillingly original, *The World Until Yesterday* provides an enthralling first-hand picture of the human past that also suggests profound lessons for how to live well today. Jared Diamond is the Pulitzer Prize-winning author of the seminal million-copy-bestseller *Guns, Germs, and Steel*, which was named one of TIME's best non-fiction books of all time, and *Collapse*, a #1 international bestseller. A professor of geography at UCLA and noted polymath, Diamond's work has been influential in the fields of anthropology, biology, ornithology, ecology and history, among others.

Upheaval Jared Diamond 2019-05-07 A "riveting and illuminating" Bill Gates Summer Reading pick about how and why some nations recover from trauma and others don't (Yuval Noah Harari), by the Pulitzer Prize-winning author of the landmark bestseller *Guns, Germs, and Steel*. In his international bestsellers *Guns, Germs and Steel* and *Collapse*, Jared Diamond transformed our understanding of what makes civilizations rise and fall. Now, in his third book in this monumental trilogy, he reveals how successful nations recover from crises while adopting selective changes -- a coping mechanism more

commonly associated with individuals recovering from personal crises. Diamond compares how six countries have survived recent upheavals -- ranging from the forced opening of Japan by U.S. Commodore Perry's fleet, to the Soviet Union's attack on Finland, to a murderous coup or countercoup in Chile and Indonesia, to the transformations of Germany and Austria after World War Two. Because Diamond has lived and spoken the language in five of these six countries, he can present gut-wrenching histories experienced firsthand. These nations coped, to varying degrees, through mechanisms such as acknowledgment of responsibility, painfully honest self-appraisal, and learning from models of other nations. Looking to the future, Diamond examines whether the United States, Japan, and the whole world are successfully coping with the grave crises they currently face. Can we learn from lessons of the past? Adding a psychological dimension to the in-depth history, geography, biology, and anthropology that mark all of Diamond's books, *Upheaval* reveals factors influencing how both whole nations and individual people can respond to big challenges. The result is a book epic in scope, but also his most personal yet.

Foragers, Farmers, and Fossil Fuels Ian Morris 2017-05-30 The best-selling author of *Why the West Rules—for Now* examines the evolution and future of human values Most people in the world today think democracy and gender equality are good, and that violence and wealth inequality are bad. But most people who lived during the 10,000 years before the nineteenth century thought just the opposite. Drawing on archaeology, anthropology, biology, and history, Ian Morris explains why. Fundamental long-term changes in values, Morris argues, are driven by the most basic force of all: energy. Humans have found three main ways to get the energy they need—from foraging, farming, and fossil fuels. Each energy source sets strict limits on what kinds of societies can succeed, and each kind of society rewards specific values. But if our fossil-fuel world favors democratic, open societies, the ongoing revolution in energy capture means that our most cherished values are very likely to turn out not to be useful any more. *Foragers, Farmers, and Fossil Fuels* offers a compelling new argument about the evolution of human values, one that has far-reaching implications for how we understand the past—and for what might happen next. Originating as the Tanner Lectures delivered at Princeton University, the book includes challenging responses by classicist Richard Seaford, historian of China Jonathan Spence, philosopher Christine Korsgaard, and novelist Margaret Atwood.

The Haves and the Have-Nots Branko Milanovic 2010-12-28 A leading economist at the World Bank's research division traces the history of financial inequality as reflected in famous stories, analyzing such examples as the monetary disparities between Elizabeth Bennet and Mr. Darcy and the assets of wealthy ancient Romans compared to today's super-rich.

The Last Tree on Easter Island Jared Diamond 2021-08-26 In twenty short books, Penguin brings you the classics of the environmental movement. This is Jared Diamond's haunting account of visiting the mysterious stone statues of Easter Island, showing how a remote civilization destroyed itself by exploiting its own natural resources - and why we must heed this warning. Over the past 75 years, a new canon has emerged. As life on Earth has become irrevocably altered by humans, visionary thinkers around the world have raised their voices to defend the planet, and affirm our place at the heart of its restoration. Their words have endured through the decades, becoming the classics of a movement. Together, these books show the richness of environmental thought, and point the way to a fairer, saner, greener world.

Guns, Germs and Steel Jared Diamond 2013-07-04 'A book of big questions, and big answers' Yuval Noah Harari, bestselling author of *Sapiens* Why has human history unfolded so differently across the globe? And what can it teach us about our current crisis? Jared Diamond puts the case that geography

and biogeography, not race, moulded the contrasting fates of Europeans, Asians, Native Americans, sub-Saharan Africans, and aboriginal Australians. An ambitious synthesis of history, biology, ecology and linguistics, *Guns, Germs and Steel* is a ground-breaking and humane work of popular science that can provide expert insight into our modern world. ****WINNER OF THE PULITZER PRIZE**** ****Over One Million Copies Sold****

The Mismeasure of Man (Revised and Expanded) Stephen Jay Gould 2006-06-17 The definitive refutation to the argument of *The Bell Curve*. When published in 1981, *The Mismeasure of Man* was immediately hailed as a masterwork, the ringing answer to those who would classify people, rank them according to their supposed genetic gifts and limits. And yet the idea of innate limits—of biology as destiny—dies hard, as witness the attention devoted to *The Bell Curve*, whose arguments are here so effectively anticipated and thoroughly undermined by Stephen Jay Gould. In this edition Dr. Gould has written a substantial new introduction telling how and why he wrote the book and tracing the subsequent history of the controversy on innateness right through *The Bell Curve*. Further, he has added five essays on questions of *The Bell Curve* in particular and on race, racism, and biological determinism in general. These additions strengthen the book's claim to be, as Leo J. Kamin of Princeton University has said, "a major contribution toward deflating pseudo-biological 'explanations' of our present social woes."

Eight Eurocentric Historians James Morris Blaut 2000-08-10 This text examines and critiques the work of a diverse group of Eurocentric historians who have strongly shaped our understanding of world history. It provides invaluable insights and tools for readers across a range of disciplines.

Critical Summary of Guns, Germs, and Steel - The Fates of Human Societies by Jared Diamond Dennis Bergot 2004-02-17 Seminar paper from the year 2004 in the subject Economy - Environment economics, grade: 1,0 (A), University of Hamburg (Centre for Sea and Climate Research), course: Seminar Contemporary Environmental Problems, 4 entries in the bibliography, language: English, abstract: The starting point of Diamond's book "Guns, Germs, And Steel" is a question he was asked by an indigenous New Guinean friend of his called Yali. His question was: "Why is it that you white people developed so much cargo and brought it to New Guinea, but we black people had little cargo of our own?"¹, addressing the obvious inequality in wealth and power of today's world. With his book, Diamond tries to provide an answer for this question. According to Diamond, the immediate causes for the inequalities in the world today are to be found in the different stages of development between the continents as of around A.D. 1500. By that time, only societies of Eurasia, the landmass that constitutes Asia and Europe, and there especially the Western Europeans, possessed ocean-going ships, population-decimating germs, steel weapons, horses usable for warfare, easy spread of information by an efficient writing system and many other means that come in handy decimating, subjugating or in some cases even exterminating the original inhabitants of other continents. Diamond calls these advantages the proximate factors of differing developments that led to the inequalities. The book's title "Guns, Germs, And Steel" can be understood as a summary of these proximate causes. In chapter three of his book, Diamond cites as a prominent example of the inequalities the conquest by the Spaniard Francisco Pizarro and a few hundred soldiers over the Inca emperor Atahualpa at Cajamarca/Peru in A.D. 1532. The Spanish got there and won because they possessed the above stated proximate factors. He then turns the point around and asks why, for instance, the Native Americans or Aboriginal Australians were not the ones who possessed these proximate factors and used them to conquer Europe. The Proud Tower Barbara W. Tuchman 2011-08-31 *The Proud Tower*, the Pulitzer Prize-winning *The Guns of August*, and *The Zimmerman Telegram* comprise Barbara W. Tuchman's classic histories of the

First World War era During the fateful quarter century leading up to World War I, the climax of a century of rapid, unprecedented change, a privileged few enjoyed Olympian luxury as the underclass was "heaving in its pain, its power, and its hate." In *The Proud Tower*, Barbara W. Tuchman brings the era to vivid life: the decline of the Edwardian aristocracy; the Anarchists of Europe and America; Germany and its self-depicted hero, Richard Strauss; Diaghilev's Russian ballet and Stravinsky's music; the Dreyfus Affair; the Peace Conferences in The Hague; and the enthusiasm and tragedy of Socialism, epitomized by the assassination of Jean Jaurès on the night the Great War began and an epoch came to a close. Praise for *The Proud Tower* "[Barbara W. Tuchman's] Pulitzer Prize-winning *The Guns of August* was an expert evocation of the first spasm of the 1914-1918 war. She brings the same narrative gifts and panoramic camera eye to her portrait of the antebellum world."—*Newsweek* "A rare combination of impeccable scholarship and literary polish . . . It would be impossible to read *The Proud Tower* without pleasure and admiration."—*The New York Times* "An exquisitely written and thoroughly engrossing work . . . The author's knowledge and skill are so impressive that they whet the appetite for more."—*Chicago Tribune* "[Tuchman] tells her story with cool wit and warm understanding."—*Time*

The Human Age: The World Shaped By Us Diane Ackerman 2014-09-10 Winner of the National Outdoor Book Award and the PEN New England Henry David Thoreau Prize. A dazzling, inspiring tour through the ways that humans are working with nature to try to save the planet. With her celebrated blend of scientific insight, clarity, and curiosity, Diane Ackerman explores our human capacity both for destruction and for invention as we shape the future of the planet Earth. Ackerman takes us to the mind-expanding frontiers of science, exploring the fact that the "natural" and the "human" now inescapably depend on one another, drawing from "fields as diverse as evolutionary robotics...nanotechnology, 3-D printing and biomimicry" (*New York Times Book Review*), with probing intelligence, a clear eye, and an ever-hopeful heart.
