Culturally Responsive Teaching Geneva Gay 2010 The achievement of students of color continues to be disproportionately low at all levels of education. More than ever, Geneva Gay's foundational book on culturally responsive teaching is essential reading in addressing the needs of today's diverse student population. Combining insights from multicultural education theory and research with real-life classroom stories, Gay demonstrates that all students will perform better on multiple measures of achievement when teaching is filtered through their own cultural experiences. This bestselling text has been extensively revised to include expanded coverage of student ethnic groups: African and Latino Americans as well as Asian and Native Americans as well as new material on culturally diverse communication, addressing common myths about language diversity and the effects of "English Plus" instruction.

Nuclear Systems Neil E. Todreas 1992-09-01 This edition builds on earlier traditions in providing broad subject-area coverage, application of theory to practical aspects of commercial nuclear power, and use of instructional objectives. Like the first edition, it focuses on what distinguishes nuclear engineering from the other engineering disciplines. However, this edition includes reorganization and overall update of descriptions of reactor designs and fuel-cycle steps, and more emphasis on reactor safety, especially related to technical and management lessons learned from the TMI-2 and Chernobyl - 4 accidents.

Calculations in Industrial Chemistry Ari L. Horvath 1996-12-09 Calculations in Industrial Chemistry meets the need for an extensive introduction to the techniques of problem solving in industrial chemical applications. The numerous examples are presented in an easy-to-understand fashion, aimed directly at scientists and engineers working in industry, as well as newcomers in the field. The book also provides a quick, comprehensive and contemporary re-education for practitioners, involving interdisciplinary functions and knowledge in the chemical and related industries. Ari Horvath's book is a general guide and introduction to the complex subject of problem solving; it also prepares the reader for the study of more specialised texts and the increasing body of research material published in this area. Literature sources are provided where applicable. The examples originate from the author's own rich industrial experience and cover a broad area of science and technology - invaluable to industrial workers. The book provides a step by step solution of worked examples and also collates expressions for calculations in industrial chemistry and technology. A unique feature is that most of this compilation of examples has been reported in journals or performed in the industrial environment by the author. This is "first-hand", direct problem solving for the chemist in industry.
