A Stargazing Program for Beginners Jamie Carter 2015-11-20 Sets out a simple month-by-month program to reveal all of the night sky's biggest and most beautiful secrets in just one year - and with only a few hours of stargazing each month By investing just an hour a week and \$50 in binoculars, it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns - and what they tell us about Earth, the seasons and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12 month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey he learns about the celestial mechanics at work

in the skies above that are – to the beginner – almost beyond belief. As well as the vital constellations and clusters, and the weird and wonderful nebulas, he searches out “dark sky destinations” across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey he witnesses a solar eclipse and grapples with star-charts, binoculars, smartphone apps, telescopes, spots satellites and attempts basic astrophotography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are and even where the Galactic Center Point is.

The Event Horizon John Todd Hewitt 2012-04-10 The Event Horizon is Book One of The Alliance Series. Should there be a demand for more the series will increase in size. Book one shows the first contact between man and our Brethren, the humanoids of the four worlds of the twin star solar system. We find ourselves on the first recorded journey outside our own solar system and the discovery of not only life but a myriad of worlds and peoples that inhabit them. There are of course enemies and also a visit from cosmic beings that eat planet chunks and propel themselves through space with psionic power. The many different species of known universe come together to explain the wonders of eternity. Welcome to the year 4034 Ano Domini. When the mining of the planets of our solar system began to bring in big business, as well as take the stress off of the earth. The settlements on mars and the two sides of the moon. Big Business. Kindred Rebecca Wragg Sykes 2020-08-20 ** WINNER OF THE PEN HESSELL-TILTMAN PRIZE 2021 ** 'Beautiful, evocative, authoritative.' Professor Brian Cox 'Important reading not just for anyone interested in these ancient cousins of ours, but also for anyone interested in humanity.' Yuval Noah Harari *Kindred* is the definitive guide to the Neanderthals. Since their discovery more than 160 years ago, Neanderthals have metamorphosed from the losers of the human family tree to A-list hominins. Rebecca Wragg Sykes uses her experience at the cutting-edge of Palaeolithic research to share our new understanding of Neanderthals, shoving aside clichés of rag-clad brutes in an icy wasteland. She reveals them to be curious, clever connoisseurs of their world, technologically inventive and ecologically adaptable.

Above all, they were successful survivors for more than 300,000 years, during times of massive climatic upheaval. Much of what defines us was also in Neanderthals, and their DNA is still inside us. Planning, co-operation, altruism, craftsmanship, aesthetic sense, imagination, perhaps even a desire for transcendence beyond mortality. Kindred does for Neanderthals what Sapiens did for us, revealing a deeper, more nuanced story where humanity itself is our ancient, shared inheritance.

Children of Time Adrian Tchaikovsky 2018-09-18 Adrian Tchaikovsky's award-winning novel *Children of Time*, is the epic story of humanity's battle for survival on a terraformed planet. Who will inherit this new Earth? The last remnants of the human race left a dying Earth, desperate to find a new home among the stars. Following in the footsteps of their ancestors, they discover the greatest treasure of the past age - a world terraformed and prepared for human life. But all is not right in this new Eden. In the long years since the planet was abandoned, the work of its architects has borne disastrous fruit. The planet is not waiting for them, pristine and unoccupied. New masters have turned it from a refuge into mankind's worst nightmare. Now two civilizations are on a collision course, both testing the boundaries of what they will do to survive. As the fate of humanity hangs in the balance, who are the true heirs of this new Earth?

Display for Learning Kirstie Andrew-Power 2009-03-08 The current educational agenda identifies learner wellbeing as the key determinant in achievement and outcome. How the learning environment is designed can have a huge impact on wellbeing. Successful and meaningful display reflects the ethos of a school, and an exciting, learning-focused environment makes for excited learners. An environment that mirrors respect and care makes learners feel cared for and respected by the place in which they learn. This positively impacts on how well students learn, how happy they are as they learn and the respect and care with which they treat their school; the same applies to staff. This book addresses a gap in the market for secondary school leaders and teachers (with transferable lessons for primary and 16 - 19 colleges) and provides a toolkit to develop display for learning with strategies and solutions, within the context of the school improvement and transformation agenda. The book aims to inspire colleagues in schools to develop this in their classrooms and on a whole school level - with the motivation and justification for doing so.

Granite Oath James M. Jackson 2022-08-29 On a Thursday afternoon, Kat Serrano leaves work early, briefly returns to her remote trailer deep in Michigan's Upper Peninsula woods, and drives off with no explanation to her family. Two days later someone ransacks the trailer. Kat is a Dreamer, and her mother won't talk to the police for fear she'll be deported and lose her 8-year-old granddaughter, Valeria. Valeria is devastated by the events. She and her best friend from summer camp, Megan McCree, employ a "Pinky-swear" to get Megan's grandfather Seamus McCree to learn what happened. Seamus uncovers a tangled web of drugs, prostitution, and dummy corporations, and soon find himself the target of killers. Anyone sane would wash his hands of the mess or turn it over to the police. But Seamus has

Morphology of the Rocky Members of the Solar System Elazar Uchupi 1993-12-16 These words are written on the 500th anniversary of Columbus' discovery of the New World. Surely the deep-space exploration of other worlds in our Solar System over the past few decades is an event of similar magnitude. Man has traveled far enough to see Spaceship Earth suspended alone in black space. And he has voyaged even farther to marvel at the crescent Earth rising over the Moon's cratered terrain. Instrumented spacecraft have toured the entire Solar System even beyond the ninth planet Pluto. This work of science Morphology of the Rocky Members of the Solar System is an inquiry about our extended home. As with the Darwinian and Copernican paradigms, the nature of our planetary system, as the extended world around us, has great significance for those who ponder the human condition. The deep-space views of our Planet Ocean with its sweeping clouds, and moving oceans and creeping continents must rank as the greatest photograph ever taken. Viewing Spaceship Earth hanging in the vast void is an almost frightening experience. We are so alone! It is easy to understand why so many are attracted to a simpler account of origins, like the allegorical tale of creation written in heroic style (but eschewing math, maps, figures, tables, references, and evidence) in the first eleven chapters of Genesis. This treatise examines the morphology of the six rocky planets and their 27 satellites from a broad perspective.

Hooking Up or Holding Out Jamie Callan 2006-11-01 "Enlightening and empowering, if not your mother's dating book, Hooking Up is highly recommended." Library Journal Hooking up is cool, but holding out can be even better. Many women don't feel great about hooking up before they're really ready, but they're not sure how to go about holding out and still keep the guy interested. Most books that recommend holding out prescribe tired old retro games-- not picking up the phone or pretending to have a date already. This straight-talking guide is new, different and smart. You can have a great time with men, hold plenty of power and just be yourself! Hooking Up or Holding Out shows you how to: Decide when the time is right and when it's just impulse sex Settle for nothing less than the very best sex life Hold off unwanted

Bottoming Out the Universe Richard Grossinger 2020-04-07 An exploration into consciousness, the universe, and the nature of reality • Draws on transdimensional physics and biology, reincarnation and past-life memories, animal consciousness, multiple identities, thoughtforms, soul pictures, and paranormal phenomena like crop circles and poltergeists • Explores the riddle of personal identity and how it differs from consciousness • Reveals that consciousness is more than encompassing all that exists--it also speaks to what has yet to manifest Scientific orthodoxy views the universe as conceived of matter--protons, neutrons, electrons, down to the smallest particle, quarks. But, when you keep digging, what is "beneath" quarks? The scientific worldview does not take into account consciousness or life itself. How did consciousness become part of the material universe? Is it a by-product of brain chemistry or a constituent of reality? Or, to dig deeper, which is more fundamental: the existence of an objective physical universe or our subjective experience of it? In this investigation into consciousness, the universe, and the nature of reality, Richard Grossinger offers a wide-ranging foundation for reimagining the universe as based in consciousness rather than matter. He presents in-depth analysis of the standard scientific description of the universe, revealing the holes in its theories. Exploring the interpenetration of matter and all reality by consciousness, the author looks at reincarnation and past-life memories, examining famous and lesser-known but verifiable accounts. He then explores the nature and origin of consciousness, with accompanying explorations of animal consciousness, the brain as a computer, multiple identities, thoughtforms, soul pictures, and paranormal phenomena like UFOs, faeries, and poltergeists. He also examines concepts from physics that combine elements of both consciousness and matter, such as collapsing waveforms and the uncertainty principle of quantum mechanics. Examining nonlocal and transpersonal modes of consciousness, Grossinger looks at the difference between consciousness and personal identity. He expands this discussion with reflections on Sethian cosmology, using Seth's own words and Jane Roberts's and John Friedlander's interpretations. He reveals that consciousness also encompasses what has yet to manifest and explains why the universe exists at all: why there is "something" rather than "nothing." Skewering the materialist paradigm and placing consciousness alongside mass, gravity, and heat as an essential component of the universe, Grossinger proposes that reality is a thoughtform where sentient beings collaborate to bring about a concrete realm vibrating at their own frequency.

Climate Change Ethics and the Non-Human World Brian G. Henning 2020-02-25 This book examines from different perspectives the moral significance of non-human members of the biotic community and their omission from climate ethics literature. The complexity of life in an age of rapid climate change demands the development of moral frameworks that recognize and respect the dignity and agency of both human and non-human organisms. Despite decades of careful work in non-anthropocentric approaches to environmental ethics, recent anthologies on climate ethics have largely omitted non-anthropocentric approaches. This multidisciplinary volume of international scholars tackles this lacuna by presenting novel work on non-anthropocentric approaches to climate ethics. Written in an accessible style, the text incorporates sentiocentric, biocentric, and ecocentric perspectives on climate change. With diverse perspectives from both leading and emerging scholars of environmental ethics, geography, religious studies, conservation ecology, and environmental studies, this book will offer a valuable reading for students and scholars of these fields.

NASA's Voyager Missions Ben Evans 2022-08-23 2022 marks the 45th anniversary of the Voyager probe launches. Launched into space in 1977, these twin probes explored the farthest reaches of the Solar System before venturing on a one-way journey beyond, all the while testing the bounds of science, robotic exploration and our collective imagination. This heavily revised commemorative book takes a comprehensive look at their incredible achievements, future potential and overall legacy. Chronicled herein is an epic journey to unveil the mysterious outer reaches of the Solar System for the first time. The book recounts the Voyagers' travels through the asteroid belt and past the giant gaseous planets Jupiter and Saturn, as well as Voyager 2's forays near the distant ice giants Uranus and Neptune. Each chapter details in full the game-changing scientific data and glorious imagery they sent back to Earth. This new edition incorporates all the new data we have learned in the nearly 20 years since its original publication, discussing how the knowledge first gleaned with Voyager has been built upon in subsequent decades by Cassini, Juno and New Horizons. The Voyager probes captured imaginations around the world; now is an opportune time to reflect on their unparalleled quest across the edges of the Solar System and the enigmatic interstellar medium beyond.

Space Travelers and the Genesis of the Human Form Joan D'Arc 2000 Can Darwinian evolution actually prove that we are alone in the Universe? This book illustrates that Darwinian evolution is not an empirically predictable or testable scientific paradigm. Also shows that ancient artifacts on Mars and the Moon are evidence of Game Wardens in our own solar system. Could the Earth be a controlled DNA repository for the ongoing creation and dissemination of life forms, including humans? The author puts forth compelling evidence in this well researched work.

are the original creation of the elements and the subsequent bombardment of objects, including Earth, in the Solar System by cosmic rays. Both radioactive and radiogenic nuclides are harnessed to arrive at ages of various events and processes on Earth. This collection of chapters from the Treatise on Geochemistry displays the range of radioactive geochronometric studies that have been addressed by researchers in various fields of Earth science. These range from the age of Earth and the Solar System to the dating of the history of Earth that assists us in defining the major events in Earth history. In addition, the use of radioactive geochronometry in describing rates of Earth surface processes, including the climate history recorded in ocean sediments and the patterns of circulation of the fluid Earth, has extended the range of utility of radioactive isotopes as chronometric and tracer tools. Comprehensive, interdisciplinary and authoritative content selected by leading subject experts Robust illustrations, figures and tables Affordably priced sampling of content from the full Treatise on Geochemistry

Bangkok Tattoo John Burdett 2005-05-10 Detective Sonchai Jitpleecheep of the Royal Thai Police returns in his riveting and smokily atmospheric new thriller. A farang—a foreigner—has been murdered, his body horribly mutilated, at the Bangkok brothel co-owned by Sonchai's mother and his boss. The dead man was a CIA agent. To make matters worse, the apparent culprit is sweet-natured Chanya, the brothel's top earner and a woman whom the devoutly Buddhist sleuth has loved for several lifetimes. How can Sonchai solve this crime without sending Chanya to prison? How can he engage in a cover-up without endangering his karma? And how will he ever get to the bottom of a case whose interested parties include American spooks, Muslim fundamentalists, and gangsters from three countries? As addictive as opium, as hot as Sriracha chili sauce, and bursting with surprises, Bangkok Tattoo will leave its mark on you.

Resilient Allen Stroud 2022-04-26 "Stroud raises fascinating questions about the politics of space exploration." - Publishers Weekly. The follow-up to the hugely successful Fearless ("...a treat for just about any Analog reader." - AnalogSF) "Resilient is one of those incredibly rare things - a sequel that actually improves on its predecessor. Stroud presents us with a complex, multifaceted science-fiction experience that offers a deeply compelling narrative, interlaced with rich and complex world-building and three-dimensional characters." — The Sci-Fi & Fantasy Reviewer AD 2118. Humanity has colonised the Moon, Mars, Ceres and Europa. The partnership of corporations and governments has energized the space programme for one hundred years. That partnership is shattered when a terrorist attack destroys the world's biggest solar array in Atacama, Chile, altering the global economic balance. On Mars, at Phobos Station, Doctor Emerson Drake arrives, responding to an emergency call to assist a shuttle of wounded miners, but when those miners turn out to be insurgents, Drake realises he is trapped and fighting to survive. In deep space, Captain Ellisa Shann has passed her limits. Now, the last survivors of the Khidr have to choose whether to try to get home on the captured ship, Gallowglass, or stay to observe the strange gravity anomaly that swallowed up the remains of their vessel. On Earth, in an undisclosed location, Natalie Holder finally has an opportunity to break free from her confinement, where she has been experimented on, multiple times. Her consciousness is transmitted to Phobos Station, just as insurgents take over the facility. Holder and Drake form an alliance but are separated. Drake is captured and taken to the insurgent leader - Rocher - a clone of the stowaway who caused the munity on Captain Shann's Khidr. Allen Stroud's Resilient is a masterpiece of hard sci-fi, a worthy follow up from events of his successful and highly-praised Flame Tree Press debut, Fearless. 10,000 Steps a Day in L.A. Paul Haddad 2015-09-08 10,000 Steps a Day in L.A.: 52 Walking Adventures is for urban adventurers with a passion for healthy living who are also hungry to explore L.A.'s hidden, unsung, and sometimes quirky side. This unique guidebook provides everything readers need to venture out and tackle the city's 500 square miles. The book is based on a concept that first took hold in Japan—that if people walked 10,000 steps each day, they would burn 20 percent of their caloric intake through that activity alone. Now an ingrained part of the American lifestyle, the 10,000 steps phenomenon is taking the country by storm; it is now a recognized daily goal by a number of major insurance companies like Kaiser Permanente and health institutes such as the World Health Organization, the U.S. Center for Disease Control, the U.S. Surgeon General, and the American Heart Foundation. In this first-ever book to explore the 10,000 steps concept in the City of Angels, these walks take readers through the terrain that makes Los Angeles the envy of many a metropolis—beaches, mountains, rivers, and reservoirs, not to mention the nation's largest urban park, Griffith Park—all while immersing them in the city's history and lore, offbeat locales, and popular landmarks. 10,000 Steps a Day in L.A. promises three things: 10,000 steps in each walk, a blueprint for doing it each weekend of the year (52 walks equals a year's worth of weekends), and a sense of fun and discovery about L.A. that will only make the 10,000 steps goal that much easier to attain. Readers need bring only their feet—pedometers optional.
