Consolidated guidelines on HIV prevention, testing, treatment, service delivery and monitoring World Health Organization 2021-07-16 These consolidated guidelines on HIV prevention, testing, treatment, service delivery and monitoring bring together existing and new clinical and programmatic recommendations across different ages, populations and settings, bringing together all relevant WHO guidance on HIV produced since 2016. It serves as an update to the previous edition of the consolidated guidelines on HIV. These guidelines continue to be structured along the continuum of HIV care. Information on new combination prevention approaches, HIV testing, ARV regimens and treatment monitoring are included. There is a new chapter on advanced HIV disease that integrates updated guidance on the management of important HIV comorbidities, including cryptococcal disease, histoplasmosis and tuberculosis. The chapter on general HIV care, contains a new section on palliative care and

pain management, and up to date information on treatment of several neglected tropical diseases, such as visceral leishmaniasis and Buruli ulcer. New recommendations for screening and treating of cervical pre-cancer lesions in women living with HIV are also addressed in this chapter. Guidance on service delivery was expanded to help the implementation and strengthening the HIV care cascade. Importantly, this guidance emphasizes the need for differentiated approaches to care for people who are established on ART, such as reduced frequency of clinic visits, use of multi-month drug dispensing and implementation of community ART distribution. The adoption of these efficiencies is essential to improve the quality of care of people receiving treatment and reduce the burden on health facilities, particularly in resource limited settings.

HIV Screening and Access to Care Institute of Medicine 2011-04-21 Increased HIV screening may help identify more people with the disease, but there may not be enough resources to provide them with the care they need. The Institute of Medicine's Committee on HIV Screening and Access to Care concludes that more practitioners must be trained in HIV/AIDS care and treatment and their hospitals, clinics, and health departments must receive sufficient funding to meet a growing demand for care.

**NCLEX: Pharmacology for Nurses** Nursing Aids 2016-06-20 Pharmacology is one of the most challenging subjects in nursing, not only because there is over a thousand drugs out there in the market to be familiar with, but also because pharmacology is a part of every aspect of patient care. In fact, it is a hefty part of medical-surgical nursing, pediatrics, maternal and child, geriatrics, hospice, psychiatric nursing and even community nursing. When flipping through the pages of a 3-inch thick drug handbook, would-be nurses feel a great sense of frustration. They ask themselves, "How do I study this?," "Which information should I focus on?." A proven strategy in becoming successful in Pharmacology is familiarizing oneself with the drugs. One way of doing this is to answer as many NCLEX-style questions on Pharmacology as you can and then study their rationales. This narrows down concepts to the most significant ones. Another strategy is to look at concepts that deal with safety issues. Many questions revolve around safety. It is the primary concern in Pharmacology. Have there been new drugs introduced in the last 3-5 years? Zero-in on that, too. Do research on certain issues that actually happened in real life that greatly affected patient outcomes. These strategies are going to work wonders in achieving your goals in becoming a registered nurse, but to dig into books just to look for concepts that deal with safety, and doing research on true-to-life accounts are too time consuming. This is the main reason why you need this 100-question book. The reliability of this book is ensured because nursing instructors who are experts in the field of Pharmacology developed the questions themselves. Its purpose is to serve as a very useful tool in familiarizing aspiring nurses with the concepts. More importantly, it gives a fair head start in the NCLEX review because the instructors have done the digging and the research part for you! Here in this book, you will have a compilation of questions that revolve around safety and positive patient outcomes. It will also feature new approved drugs and the concerns in their use. It will also include current topics on Pharmacology, with up-to-date information that will most likely come out in the NCLEX examination. It will give you the right concepts, and it will save you time especially during the hectic days of NCLEX preparation. So get your head start now!
