Geographers Hayden Lorimer 2016-09-22 *Geographers: Biobibliographical Studies*, Volume 35 includes seven essays discussing the contribution made to geography by eleven geographers. The subjects include: three British figures, Francis Rennell Rodd (1895-1978) expert on the Sahara; David Harris (1930-2013), a geographer with archaeological interests; and William Gordon East, historical geographer (1902-1998); a Spanish urban scholar, Enric Martin (1928-2012); Mauricio de Almeida Abreu (1948-2011), a Brazilian urban and historical geographer; and two essays on French geographers, one on Jacques Levainville (1869-1932), the other an innovative prosopographical essay on five French authors involved in the monumental Vidalian *Geographie Universelle* of the early 20th century. In these studies, geography's international dimensions are illuminated and the subject's vibrant history shown to be the result of committed endeavours in the field, in the classroom and in print.

Theological Reflections on the Hong Kong Umbrella Movement Justin K.H. Tse 2016-07-14 This book gathers the voices of four local Hong Kong theologians to reflect on the 2014 democracy protests in the city from the perspectives of Catholic social teaching, feminist and queer intersectionality, Protestant liberation, and textual exegesis. The volume also includes an extended primer on Hong Kong politics to aid readers as they reflect on the theology underlying the democracy protests. September 28, 2014 is known as the day that political consciousness in Hong Kong began to shift. As police fired eighty-seven volleys of tear gas at protesters demanding "genuine universal suffrage" in Hong Kong, the movement (termed the "Umbrella Movement") ignited a polarizing set of debates over civil disobedience, government collusion with private interests, and democracy. The Umbrella Movement was also a theological watershed moment, a time for religious reflection. This book analyzes the role that religion played in shaping the course of this historic movement.

Understanding Urban Tourism Martin Selby 2003-12-18 Despite the formidable growth of urban tourism there has been little of the critical engagement that one would expect from the social sciences: the rich potential of contemporary social science for urban tourism has yet to be realized. Martin Selby's textbook makes available to practitioners and students seeking to understand the phenomenon of tourism in towns and cities the methods and concepts that are currently enhancing and transforming our understanding of society in other areas of the social sciences. With an emphasis on image, culture and experience, the author draws upon the "cultural turn" to explain the human aspects of the urban tourism phenomenon. The discussions emphasize the significance of urban tourism within debates upon the contemporary city, postmodernity and the pursuit of social science. Clearly written, with case studies and further reading, this book should be welcomed by students and lecturers in geography, tourism, planning and sociology.

Approaches to Human Geography Stuart Aitken 2006-01-27 Approaches to Human Geography is the essential student primer on theory and practice in Human Geography. It is a systematic review of the key ideas and debates informing post-war geography, explaining how those ideas work in practice. Avoiding jargon - while attentive to the rigor and complexity of the ideas that underlie geographic knowledge - the text is written for students who have not met

philosophical or theoretical approaches before. This is a beginning guide to geographic research and practice.

Humanist Geography Yi-fu Tuan 2012 For more than fifty years, Yi-Fu Tuan has carried the study of humanistic geography—what John K. Wright early in the twentieth century called geosophy, a blending of geography and philosophy—to new heights, offering with each new book a fresh and often unique intellectual introspection into the human condition. His latest book, *Humanist Geography*, is a testament of all that he has learned and encountered as a geographer. In returning to and reappraising his previous books, Tuan emphasizes how the study of humanist geography can offer a younger generation of students, scholars, and teachers a path toward self-discovery, personal fulfillment, and even enlightenment. He argues that in the study of place can be found the wonders of the human mind and imagination, especially as understood by the senses, even as we human beings deal with nature's stringencies and our own deep flaws.

The text contains eight different discussions that cover topics such as the direction of social practice research and the concept of people, society, and nature in social science. Human Geography 2014-05-12 'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject.

Humanistic Geography and Literature (RLE Social & Cultural Geography) Douglas C. D. Pocock 2014-01-23 This book introduces the beginning student to the major concepts, materials and tools of the discipline of geography. While it presents geographic theory, as whole and for each of its parts, the chief emphasis is on concrete analysis and example rather than on abstraction, an approach which has proven more successful for undergraduate courses than those with a more heavily theoretical bias. The text was extensively re-written for the third edition, which enhanced its clarity and effectiveness, with expanded cartographic coverage.

Exploring Social Geography (Routledge Revivals) Peter A. Jackson 2014-06-17 Exploring Social Geography, first published in 1984, offers a challenging yet comprehensive introduction to the wealth of empirical research and theoretical debate that has developed in response to the advent of a social approach to the subject. The argument emphasises the essentially spatial structure of social interaction, and includes a succinct discussion of geographical research on segregation and interaction, which has combined numerical analyses and qualitative ethnographic field research. A distinctive view of social geography

is adopted, inspired by the Chicago school of North American pragmatism, but also incorporating the formal sociological theories of Simmel and Weber. Exploring Social Geography will be of value to students of urban geography in particular. However, it will also indicate a wide-ranging and distinctive perspective for all students of the social sciences with a special interest in debates concerning urban, ethnic, racial, anthropological and theoretical issues.

Rediscovering Geography Rediscovering Geography Committee 1997-04-11 As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

The Human Face of Globalization Jacques Audinet 2004-11-20 Anthropologist and sociologist Jacques Audinet proposes an alternative to culture wars and simple multiculturalism as he explores the history and evolution of mestizaje, the mixing of races and cultures resulting in a third and new force able to ease the tensions between the original two. Audinet reviews the tragic history of imperial and colonial conquests and traces the growth of mestizaje, especially stimulated by literature, music and sports. Audinet argues that, instead of chasing or preserving the illusion of "pure" races, we need to face the shifting boundaries of peoples and cultures. He acknowledges the uncertainty of the changes, but emphasizes the essential role that mestizaje can play in the avoidance of racial and cultural clashes while pursuing equality as part of the promise of a democratic society.

The Fundamentals of Human Factors Design for Volunteered Geographic Information Christopher J. Parker 2014-01-03 This book explores the roles in which volunteered and professional information play within neogeography from a human factors perspective. The unique advantages of each information type are considered alongside how they may be utilised to create products and services delivering highly functional, efficient and satisfying experiences to their users. The overall aim of this book is to address the issue of how Volunteered Geographic Information (VGI) can be combined with Professional Geographic Information (PGI) to satisfy the information search requirements of consumer-users via highly usable mashups. Firstly, this required the development of an

understanding of the way different users perceive VGI and PGI in terms of its benefits to their activities and information needs. Secondly, the benefits that VGI may bring to the user experience of a mashup (which cannot be attained through the use of PGI) needed to be understood. In order to achieve this, a user centred design perspective was implemented throughout the research.

Exploring Contemporary Migration Paul Boyle 2014-06-11 Exploring Contemporary Migration provides the first comprehensive introduction to the various aspects of population migration in both the developed and the developing worlds. These patterns are then explored through the use of specific migration-related themes: employment, stage in the life course, quality of life, societal engineering, violence and persecution, and the role of culture. Exploring Contemporary Migration is written in a user-friendly, accessible style, appealing to undergraduate students of population geography and social science students taking a population module. This text will also be valuable reading to those researchers and academics concerned with gaining a broad understanding of the dynamics and patterns of contemporary population.

Philosophies of Place Peter D. Herschok 2019-06-30 Humanity takes up space. Human beings, like many other species, also transform spaces. What is perhaps uniquely human is the disposition to qualitatively transform spaces into places that are charged with distinctive kinds of intergenerational significance. There is a profound, felt difference between a house as domestic space and a home as familial place or between the summit of a mountain one has climbed for the first time and the "same" rock pinnacle celebrated in ancestral narratives. Contemporary philosophical uses of the word "place" often pivot on the distinction between "space" and "place" formalized by geographer-philosopher Yi-fu Tuan, who suggested that places incorporate the experiences and aspirations of a people over the course of their moral and aesthetic engagement with sites and locations. While spaces afford possibilities for different kinds of presence—physical, emotional, cognitive, dramatic, spiritual—places emerge as different ways of being present, fuse over time, and saturate a locale with distinctively collaborative patterns of significance. This approach to issues of place, however, is emblematic of what Edward S. Casey has argued are convictions about the primacy of absolute space and time that evolved along with the progressive dominance of the scientific imagination and modern imaginations of the universal. The recent reappearance of place in Western philosophy represents a turn away from abstract and a priori reasoning and back toward phenomenal experience and the primacy of embodied and emplaced intelligence. Places are enacted through the sustainably shared practices of mutually-responsive and mutually-vulnerable agents and are as numerous in kind as we are divergent in the patterns of values and intentions. The contributors to this volume draw on resources from Asian, European, and North American traditions of thought to engage in intercultural reflection on the significance of place in philosophy and of the place of philosophy itself in the cultural, social, economic, and political domains of contemporary life. The conversation

of place that results explores the meaning of intercultural philosophy, the critical interplay of place and personal identity, the meaning of appropriate emplacement, the shared place of politics and religion, and the nature of the emotionally emplaced body.

Encyclopedia of Human Geography Gerald Rudolph Pitzl 2004 The full range of this remarkable field is presented through nearly 300 pertinent models, concepts, theories, and people associated with human geography.

Geography and Geographers Ron Johnston 2015-12-22 Geography and Geographers continues to be the most comprehensive and up-to-date overview of human geography available. It provides a survey of the major debates, key thinkers and schools of thought in the English-speaking world, setting them within the context of economic, social, cultural, political and intellectual changes. It is essential reading for all undergraduate geography students. It draws on a wide reading of the geographical literature and addresses the ways geography and its history are understood and the debates among geographers regarding what the discipline should study and how. This extensively updated seventh edition offers a thoroughly contemporary perspective on human geography for new and more experienced students alike.

Rational Landscapes and Humanistic Geography Edward Relph 2015-07-30 This book, first published in 1981, explores why it is that the modern built environment, while successfully providing material comfort and technical efficiency, none the less breeds despair and depression rather than inspires hope and commitment. The source of this paradox, where material benefits appear to have been gained only at the expense of intangible values and qualities is found in humanism, the persistent and powerful belief that all problems can be solved through the use of human reason. But humanism has become increasingly confused, rationalistic, callously devoted to efficiency, and authoritarian. These confusions and contradictions, together with the anti-nature stance of humanism and its failure to teach humane behaviour, lead the author to conclude that humanism is best rejected. Such rejection does not advocate the inhuman and anti-human, but requires instead a return to the 'humility' that lies at the origin of humanism – a respect for objects, creatures, environments and people. This 'environmental humility' is explored in the context of individuality of settings, ways of seeing landscapes, appropriation and ways of building places. This title will be of interest to students of human geography.

Geographical Gerontology Mark W. Skinner 2017-11-27 Understanding where ageing occurs, how it is experienced by different people in different places, and in what ways it is transforming our communities, economies and societies at all levels has become crucial for the development of informed research, policy and programmes. This book focuses on the interdisciplinary field of study – geographical gerontology – that addresses these issues. With contributions from more than 30 leading geographers and gerontologists, the book examines the scope and depth of geographical perspectives, concepts and approaches applied to the study of ageing, old age and older populations. The book features 25

chapters organized into five parts that cover the field's theoretical traditions and intellectual evolution; the contributions of key disciplinary perspectives from population geography, social and cultural geography, health geography, urban planning and environmental studies; the scales of inquiry within geographical gerontology from the global to the embodied; the thematic breadth of contemporary issues of interest that define the field (places, spaces and landscapes of ageing); and a discussion about challenges, opportunities and agendas for future developments in geography and gerontology. This book provides the first comprehensive foundation of knowledge about the state of the art of geographical gerontology that will be of interest to scholars of ageing around the world.

Approaching Human Geography Paul J. Cloke Chris Philo David Sadler 1991-04-28 This introduction to the development of new theoretical approaches to human geography sets out to explain the key features of these new approaches, and to trace their antecedents and implications. The authors also highlight points of comparison and contrast, inter-connection and dissimilarity. An introductory chapter describes and accounts for the theoretical diversity present within twentieth-century human geography, and particular attention is paid to the transition from environmental and regional approaches to the spatial science of the 1960s. This chapter then sets the stage for the later chapters, which deal systematically with different post-1960s approaches: Marxism, humanism, realism, structuration and postmodernism. Each of these chapters deals with the chronological development of the appropriate literature, describes the key claims and arguments, and then presents a worked example to illustrate the benefits and pitfalls of an approach in practice. A concluding chapter re-integrates the diverse themes and reflects briefly on possible future theoretical developments in human geography in the 1990s. The principal

chapters of the book are framed by both a preface and an epilogue, which address questions about relativism in approaching human geography, while also stressing the need for continued commitment and critical sensitivity in geographical enquiry. The book is written in an easily accessible style with generous expositions of key claims and arguments, and thorough cross-referencing between chapters.

Re-writing Spatiality Britta Kuhlenbeck 2010 The objective of this project is to encourage new ways of thinking about the meaning and significance of space. It follows a desire that has been expressed and theorized by Henri Lefebvre - and by extension Edward W. Soja - to remove Spatiality from the margin of the "Trialectics of Being" and to bring it into the "Trialectics' fold" alongside with - and of at least equal significance to - Historicity and Sociality. The thesis focuses on how space of the Pilbara region in Western Australia is produced in contemporary Australian writing, film, art and through "lived experience". The thesis argues for an understanding of space as essentially dynamic.
