Advanced Computing, Networking and Informatics- Volume 2 Malay Kumar Kundu 2014-05-26
Advanced Computing, Networking and Informatics are three distinct and mutually exclusive disciplines of knowledge with no apparent sharing/overlap among them. However, their convergence is observed in many real world applications, including cyber-security, internet banking, healthcare, sensor networks, cognitive radio, pervasive computing amidst many others. This two-volume proceedings explore the combined use of Advanced Computing and Informatics in the next generation wireless networks and security, signal and image processing, ontology and human-computer interfaces (HCI). The two volumes together include 148 scholarly papers, which have been accepted for presentation from over 640 submissions in the second International Conference on Advanced Computing, Networking and Informatics, 2014, held in Kolkata, India during June 24-26, 2014. The first volume includes innovative computing techniques and relevant research results in informatics with selective applications in pattern recognition, signal/image processing and HCI. The second volume on the other hand demonstrates the possible scope of the computing techniques and informatics in wireless communications, networking and security.

The Symbian OS Architecture Sourcebook Ben Morris 2007-04-30 The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved

through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

Development of Mobile Student Attendance Monitor Using Rfid Wajid Ishfaq 2012-04 This project is based on the development of attendance monitoring system, called mobile student attendance monitor. This project is motivated for the reason that the student's attendance record is the most important element which can reflect their academic achievement in the institutions. Mostly, the attendance register is circulated in the lecture rooms by the lecturers. This procedure is time taking method and unsuitable for huge number of students in a big lecture hall. Aim of the project is to develop an efficient, user friendly and effective mobile attendance system that provides an alternative solution to manual attendance in the educational institutions. This prototype system has been built using different technologies like as PHP, My SQL and VB.NET to deal the students' attendances by using RFID reader. As, most of the academic institutions provide their students and staffs, ID cards with RFID tags on them. These cards are also known as 'smart cards'. This project is designed to collect and manage student attendance through this technology which works on the verification of the students ID and recording their time of entrance and exit in the lecture halls.
