Macondo Well Deepwater Horizon Blowout National Research Council 2012-03-02 The blowout of the Macondo well on April 20, 2010, led to enormous consequences for the individuals involved in the drilling operations, and for their families. Eleven workers on the Deepwater Horizon drilling rig lost their lives and 16 others were seriously injured. There were also enormous consequences for the companies involved in the drilling operations, to the Gulf of Mexico environment, and to the economy of the region and beyond. The flow continued for nearly 3 months before the well could be completely killed, during which time, nearly 5 million barrels of oil spilled into the gulf. *Macondo Well-Deepwater Horizon Blowout* examines the causes of the blowout and provides a series of recommendations, for both the oil and gas industry and government regulators, intended to reduce the likelihood and impact of any future losses of well control during offshore drilling. According to this report, companies involved in offshore drilling should take a "system safety" approach to anticipating and managing possible dangers at every level of operation -- from ensuring the integrity of wells to designing blowout preventers that function under all foreseeable conditions-- in order to reduce the risk of another accident as catastrophic as the Deepwater Horizon explosion and oil spill. In addition, an enhanced regulatory approach should combine strong industry safety goals with mandatory oversight at critical points during drilling operations. *Macondo Well-Deepwater Horizon Blowout* discusses ultimate responsibility and accountability for well integrity and safety of offshore equipment, formal system safety education and training of personnel engaged in offshore drilling, and guidelines that should be established so that well designs incorporate protection against the various credible risks associated with the drilling and abandonment process. This book will be of interest to professionals in the oil

and gas industry, government decision makers, environmental advocacy groups, and others who seek an understanding of the processes involved in order to ensure safety in undertakings of this nature.

Advances in Spatio-Temporal Analysis Xinming Tang 2007-08-23 Developments in Geographic Information Technology have raised the expectations of users. A static map is no longer enough; there is now demand for a dynamic representation. Time is of great importance when operating on real world geographical phenomena, especially when these are dynamic. Researchers in the field of Temporal Geographical Information Systems (TGIS) have been developing methods of incorporating time into geographical information systems. Spatio-temporal analysis embodies spatial modelling, spatio-temporal modelling and spatial reasoning and data mining. *Advances in Spatio-Temporal Analysis* contributes to the field of spatio-temporal analysis, presenting innovative ideas and examples that reflect current progress and achievements.

Asian Defence Review 2012 Air Commodore Jasjit Singh 2013-03-15 With the shift of global power from West to East, we have entered the era of an Asia-centred century. The rise of China and India, the recovery and resurgence of Russia on one side and Japan on the other, and the nature of the international order are leading to enormous changes. These transformational changes in the military, economic and political dynamics of Asia are accelerating with the passage of time. Historically, changes in the international order and equations of power among national have been almost inevitably accompanied by conflicts and wars. The challenge ahead of the international community in general and Asian countries in particular would be how to ensure that this is avoided, and competition, so necessary to shaping the future, is managed below the levels of armed conflict. This is crucial for most countries like India so that their comprehensive national development can progress without adverse developments. In order to work toward such goals, it is necessary to look at security and military-related issues as objectively as possible. This volume, a resource base for the professional and the general reader, is the sixth in the series of the annual publication of the Centre for Air Power Studies under this title, which aims to fill a critical information and knowledge gap in current strategic literature dealing with military strategy, defence politics and trends in military capabilities that impact countries in Asia. In particular, it covers some of the important areas that affect Asian countries, with a focus on China, India and Pakistan, to provide the requisite regional balance.

Rotary Drilling and Blasting in Large Surface Mines Bhalchandra V. Gokhale
2010-12-14 In large surface mining operations, drilling and blasting activities constitute more than 15% of the total costs. In order to optimize performance and minimize costs, a thorough knowledge of drill and blast operations is, therefore, extremely important. In this unique reference volume, rotary blasthole drilling and surface blasting, as applied in la
