Doctoral Writing Susan Carter 2020-01-01 This book on doctoral writing offers a refreshingly new approach to help Ph.D. students and their supervisors overcome the host of writing challenges that can make—or break—the dissertation process. The book’s unique contribution to the field of doctoral writing is its style of reflection on ongoing, lived practice; this is more readable than a simple how-to book, making it a welcome resource to support doctoral writing. The experiences and practices of research writing are explored through bite-sized vignettes, stories, and actionable ‘teachable’ accounts. *Doctoral Writing: Practices, Processes and Pleasures* has its origins in a highly successful academic blog with an international following. Inspired by the popularity of the blog (which had more than 14,800 followers as of October 2019) and a desire to make our six years’ worth of posts more accessible, this book has been authored, reworked, and curated by the three editors of the blog and reconceived as a conveniently structured book.

Putnam and Beyond Răzvan Gelca 2017-09-19 This book takes the reader on a journey through the world of college mathematics, focusing on some of the most important concepts and results in the theories of polynomials, linear algebra, real analysis, differential equations, coordinate geometry, trigonometry, elementary number theory, combinatorics, and probability. Preliminary material provides an overview of common methods of proof: argument by contradiction, mathematical induction, pigeonhole principle, ordered sets, and invariants. Each chapter systematically presents a single subject within which problems are clustered in each section according to the specific topic. The exposition is driven by nearly 1300 problems and examples chosen from numerous sources from around the world; many original contributions come from the authors. The

source, author, and historical background are cited whenever possible. Complete solutions to all problems are given at the end of the book. This second edition includes new sections on quadratic polynomials, curves in the plane, quadratic fields, combinatorics of numbers, and graph theory, and added problems or theoretical expansion of sections on polynomials, matrices, abstract algebra, limits of sequences and functions, derivatives and their applications, Stokes' theorem, analytical geometry, combinatorial geometry, and counting strategies. Using the W.L. Putnam Mathematical Competition for undergraduates as an inspiring symbol to build an appropriate math background for graduate studies in pure or applied mathematics, the reader is eased into transitioning from problem-solving at the high school level to the university and beyond, that is, to mathematical research. This work may be used as a study guide for the Putnam exam, as a text for many different problem-solving courses, and as a source of problems for standard courses in undergraduate mathematics. Putnam and Beyond is organized for independent study by undergraduate and graduate students, as well as teachers and researchers in the physical sciences who wish to expand their mathematical horizons.

The Politics of Street Food Benjamin Etzold 2013 In Bangladesh, the sale of food in public space is often contested: Street food is needed, but not wanted. 100,000 street vendors sell dishes, snacks, fruits, and beverages in the megacity of Dhaka. Street food is important for urban food security as mobile labourers and the poor rely on cheap, readily available and nutritious food. The authorities argue that encroachments of streets and footpaths are illegal and disorderly, and that street food is unhygienic. They therefore evict the vendors regularly. But the hawkers are somewhat protected through the informal rules of the street. While some of them are highly vulnerable to poverty and police raids, most navigate well through these contested governance regimes and can successfully sustain their livelihoods and contribute to urban food security. In this book, different conceptual perspectives are integrated on the basis of Bourdieu's Theory of Practice. It provides fresh insights into the role of street food in urban food system and contributes to a deeper understanding of the vulnerabilities of the urban poor, the informal governance of public space, and the dominant discourses on street vending. From a relational and critical perspective, this book captures "the politics of street food" and sketches innovative solutions towards fair street food governance.

Discard Studies Max Liboiron 2022-05-24 An argument that social, political, and economic systems maintain power by discarding certain people, places, and things. Discard studies is an emerging field that looks at waste and wasting broadly construed. Rather than focusing on waste and trash as the primary objects of study, discard studies looks at wider systems of waste and wasting to explore how some materials, practices, regions, and people are valued or devalued, becoming dominant or disposable. In this book, Max Liboiron and Josh Lepawsky argue that social, political, and economic systems maintain power by discarding certain people, places, and things. They show how the theories and methods of discard studies can be applied in a variety of cases, many of which do not involve waste, trash, or pollution. Liboiron and Lepawsky consider the partiality of knowledge and offer a theory of scale, exploring the myth that most waste is municipal solid waste produced by consumers; discuss peripheries, centers, and power, using content moderation as an example of how dominant systems find ways to discard; and use theories of difference to show that universalism, stereotypes, and inclusion all have politics of discard and even purification—as exemplified in “inclusive” efforts to broaden the Black Lives Matter movement. Finally, they develop a theory of change by considering “wasting well,” outlining techniques, methods, and propositions for a justice-oriented discard studies that keeps power in view.

A Friendly Mathematics Competition Rick Gillman 2003 The Mathematical Olympiad examinations, covering the USA Mathematical Olympiad (USAMO) and the International Mathematical Olympiad (IMO), have been published annually by the MAA American Mathematics Competitions since 1976. The IMO is the world mathematics championship for high school students. It takes place annually in a different country. The IMO competitions help to discover, encourage and challenge mathematically gifted young people all over the world. The USAMO and the Team Selection Test (TST) are the last two stages of the selection process leading to representing the United States of America in the IMO. The preceding examinations are the AMC 10 or AMC 12 and the American Invitational Mathematics Examination (AIME). Participation in the AIME, USAMO, and the TST is by invitation only, based on performance in the preceding exams of the sequence. Through the AMC contests and the IMO, young gifted mathematicians are identified and recognized while they are still in secondary school. Participation in these competitions provides them with the chance to measure themselves against other exceptional students from all over the world. Editors, Andreescu and Feng provide remarkable solutions developed by the examination committees, contestants, and experts, during or after the contests. They also provide a detailed report of the 1995-2000 USAMO/IMO results, and a comprehensive guide to other materials emphasizing advanced problem-solving. This collection of excellent problems and beautiful solutions is a valuable companion for students who wish to develop their interest in mathematics outside the school curriculum and to deepen their knowledge of mathematics. A Friendly Mathematics Competition tells the story of the Indiana College Mathematics Competition (ICMC) by presenting the problems, solutions, and results of the first 35 years of the ICMC. The ICMC was organized in reaction to the Putnam Exam - its problems were to be more representative of the undergraduate curriculum, and students could work on them in teams. Originally participation was originally restricted to the small, private colleges and universities of the state, but was later opened up to students from all of the schools in Indiana. The competition was quickly nicknamed the "Friendly" Competition because of its focus on solving mathematical problems, which brought faculty and students together, rather than on the competitive nature of winning. Organized by year, the problems and solutions in this volume present an excellent archive of information about what has been expected of an undergraduate mathematics major over the past 35 years. With more than 245 problems and solutions, the book is also a must buy for faculty and students interested in problem-solving. The index of problems lists problems in:

Writing Beyond Pen and Parchment Ricarda Wagner 2019-10-21 What can stories of magical engraved rings or prophetic inscriptions on walls tell us about how writing was perceived before print transformed the world? *Writing beyond Pen and Parchment* introduces readers to a Middle Ages where writing is not confined to manuscripts but is inscribed in the broader material world, in textiles and tombs, on weapons or human skin. Drawing on the work done at the Collaborative Research Centre "Material Text Cultures," (SFB 933) this volume presents a comparative overview of how and where text-bearing artefacts appear in medieval German, Old Norse, British, French, Italian and Iberian literary traditions, and also traces the paths inscribed objects chart across multiple linguistic and cultural traditions. The volume's focus on the raw materials and practices that shaped artefacts both mundane or fantastical in medieval narratives offers a fresh perspective on the medieval world that takes seriously the vibrancy of matter as a vital aspect of textual culture often overlooked.

The Troubadours Simon Gaunt 1999-06-28 The dazzling culture of the troubadours - the virtuosity of their songs, the subtlety of their exploration of love, and the glamorous international careers some troubadours enjoyed - fascinated contemporaries and had a lasting influence on European life and literature. Apart from the refined love songs for which the troubadours are renowned, the tradition includes political and satirical poetry, devotional lyrics and bawdy or zany poems. It is also in the troubadour song-books that the only substantial collection of medieval lyrics by women is preserved. This book offers a general introduction to the troubadours. Its sixteen newly-commissioned essays, written by leading scholars from Britain, the US, France, Italy and Spain, trace the historical development and setting of troubadour song, engage with the main trends in troubadour criticism, and examine the reception of troubadour poetry. Appendices offer an invaluable guide to the troubadours, to technical vocabulary, to research tools and to surviving manuscripts.

Townships as Attraction Manfred Rolfes 2009 "Since the end of the Apartheid, international tourism in South Africa has increasingly gained importance for the national economy. The centre of this PKS issue's attention is a particular form of tourism: township tourism, i.e. guided tours to the residential areas of the black population. About 300,000 tourists per year visit the townships of Cape Town. The tours are also called cultural, social, or reality tours. The different aspects of township tourism in Cape Town were the subject of a geographic field study, which was undertaken during a student research project of Potsdam University in 2007. The text presents the empirical results of the field study, and demonstrates how townships are constructed as spaces of tourism."--Publisher's description.

Analysing Fascist Discourse Ruth Wodak 2013 This book focuses primarily on continuities and discontinuities of fascist politics as manifested in discourses of post-war European countries. Many traumatic pasts in Europe are linked to the experience of fascist and national-socialist regimes in the 20th century and to related colonial and imperialist expansionist politics. And yet we are again confronted with the emergence, rise and success of extreme right wing political movements, across Europe and beyond, which frequently draw on fascist and national-socialist ideologies, themes, idioms, arguments and lexical items. Post-war taboos have forced such parties, politicians and their electorate to frequently code their exclusionary fascist rhetoric. This collection shows that an interdisciplinary critical approach to fascist text

and talk—subsuming all instances of meaning-making (oral, visual, written, sounds, etc.) and genres such as policy documents, speeches, school books, media reporting, posters, songs, logos and other symbols—is necessary to deconstruct exclusionary meanings and to confront their inegalitarian political projects.

Polyphony in Medieval Paris Catherine A. Bradley 2018-07-31 Polyphony associated with the Parisian cathedral of Notre Dame marks a historical turning point in medieval music. Yet a lack of analytical or theoretical systems has discouraged close study of twelfth- and thirteenth-century musical objects, despite the fact that such creations represent the beginnings of musical composition as we know it. Is musical analysis possible for such medieval repertoires? Catherine A. Bradley demonstrates that it is, presenting new methodologies to illuminate processes of musical and poetic creation, from monophonic plainchant and vernacular French songs, to polyphonic organa, clausulae, and motets in both Latin and French. This book engages with questions of text-music relationships, liturgy, and the development of notational technologies, exploring concepts of authorship and originality as well as practices of citation and musical reworking.

student work and actually see better results in terms of student learning? That's the goal of Glen Pearsall, who shares dozens of classroom-tested strategies that lessen teachers' workload while increasing students' class participation and improving their understanding. Readers will learn how to • Refine their classroom questioning techniques to continually check students' progress and provide instant feedback; • Encourage students to internalize learning goals so they better understand what is expected of them; • Use fast, formative assessment strategies to check and correct during class time; • Modify traditional summative-testing strategies to monitor student progress in a formative way; • Speed up the correction process via student self-proofing, representative sampling, and helpful technology tools; and • Engage students in becoming actively involved in assessing their own work. Drawing from his own experience as a teacher and coach, Pearsall offers practical, real-world advice in the form of techniques that are both effective and sustainable in the everyday classroom. The result is smarter assessment—for both teachers and students.

The Architecture of the City Aldo Rossi 1984-09-13 Aldo Rossi was a practicing architect and leader of the Italian architectural movement La Tendenza and one of the most influential theorists of the twentieth century. The Architecture of the City is his major work of architectural and urban theory. In part a protest against functionalism and the Modern Movement, in part an attempt to restore the craft of architecture to its position as the only valid object of architectural study, and in part an analysis of the rules and forms of the city's construction, the book has become immensely popular among architects and design students.
