**Assistive Technology from Adapted Equipment to Inclusive Environments** Pier Luigi Emiliani 2009 The concept of assistive technology is moving away from adopting the most appropriate devices to overcome the limitations of users, to the designing and setting up of total environments in which people can live, supported by suitable services and additional support devices integrated within the environment. These two perspectives are deeply intertwined, both from technological and social points

of view, and the relationship between them currently represent the primary challenge for the field of assistive technology. This publication covers the proceedings of the 10th European Conference of the Association for the Advancement of Assistive Technology in Europe (AAATE), the organization which stimulates the advancement of assistive technology for the benefit of people with disabilities, including elderly people. This conference seeks to bridge the gap between these two complementary approaches, providing an opportunity to clarify differences and common points and to better define future direction. This publication is a significant contribution to the advancement of inclusion for people living with a disability everywhere.

*Dissemination and Implementation of Evidence-Based Practices in Child and Adolescent Mental Health* Rinad S. Beidas 2014-05-20 Mental health disorders are common in youth, impacting up to 1 in 5 children and adolescents. Typically, mental health difficulties result in impaired functioning and lower quality of life for both youth and their families. Fortunately, there are psychosocial treatments for the mental health needs of youth that have earned the "evidence-based" label. However, these treatments are not widely available, and it is estimated that it can take up to 17 years for them to be transported into community settings. As a result, a new field of dissemination and implementation (DI) science has emerged to address this problem. Dissemination refers to the transfer of information about evidence-based practices to community settings, and implementation refers to active strategies to assist adoption of evidence-based practices in community settings. *Dissemination and Implementation of Evidence-Based Practices in Child and Adolescent Mental Health* is the first book to bring together the world's foremost experts in implementation science and evidence-based practices for youth to provide the latest findings around DI for children and adolescents. Chapters provide comprehensive coverage of the science of dissemination and implementation across contexts, disorders, and international perspectives. This volume will be an essential resource to implementation scientists and scholars, instructors in doctoral-level training programs, and graduate students, as well as policymakers, community mental health clinicians and administrators, school administrators, researchers, and other mental health professionals.

are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.
