## **Psychological Testing and Assessment** Renée Margaret Tobin 2021-03

"Psychological tests and other tools of assessment may differ with respect to a number of variables, such as content, format, administration procedures, scoring and interpretation procedures, and technical quality. The content (subject matter) of the test will, of course, vary with the focus of the particular test. But even two psychological tests purporting to measure the same thing—for example, personality—may differ widely in item content. This is so because two test developers might have entirely different views regarding what is important in measuring "personality"; different test developers employ different definitions of "personality." Additionally, different test developers come to the test development process with different theoretical orientations"--

Values Clarification in Counseling and Psychotherapy Howard Kirschenbaum 2013-03-06 This work meets a long-standing need in the helping professions by being the first and only comprehensive book on how counselors and psychotherapists can work with clients around values, goal-setting, decision-making and action planning. Helping clients determine their priorities, set goals, make decisions, and take action to improve their lives are common tasks for virtually all helping professionals when engaging with clients. This is the process known as "values clarification" (or "Values Clarification"). While counselors and psychotherapists widely practice values clarification—some knowingly, others unaware—they typically do so with a limited understanding of its theory, methods and various applications. This book demonstrates, with great precision, case studies, and hundreds of clinical examples, how counselors and psychotherapists in many fields can ask good clarifying questions, conduct clarifying interviews, and employ dozens of values clarification strategies with individuals, couples, families, and groups. To illustrate how values clarification can be used to explore a myriad of counseling topics, the examples throughout the text are often grouped around more specific applications for marriage and family counseling, career counseling, substance abuse and recovery counseling, geriatric counseling, grief counseling, pastoral counseling, financial counseling, school counseling, rehabilitation counseling, counselor/clinical education and supervision, health counseling, and personal growth. There are clear descriptions of what values clarification is and is not, theory and research, multicultural and diversity issues, and how counselors and therapists can handle value and moral conflicts with clients. Values clarification is compared and contrasted to other approaches to counseling and psychotherapy, including person-centered, cognitive-behavioral, reality therapy-choice theory, existential, individual psychology, solution-focused, narrative, motivational interviewing, acceptance and commitment therapy, appreciative inquiry, life coaching, and positive psychology.

Parenting Matters National Academies of Sciences, Engineering, and Medicine 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

**The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition** American Psychiatric Association 2015-07-29 Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice

guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.
