*Health and Medical Geography, Fourth Edition* Michael Emch 2017-02-02 Why are rainfall, carcinogens, and primary care physicians distributed unevenly over space? The fourth edition of the leading text in the field has been updated and reorganized to cover the latest developments in disease ecology and health promotion across the globe. The book accessibly introduces the core questions and perspectives of health and medical geography and presents cutting-edge techniques of mapping and spatial analysis. It explores the intersecting genetic, ecological, behavioral, cultural, and socioeconomic processes that underlie patterns of health and disease in particular places, including how new diseases and epidemics emerge. Geographic dimensions of health care access and service provision are addressed. More than 100 figures include 16 color plates; most are available as PowerPoint slides at the companion website. New to This Edition: \*Chapters on the political ecology of health; emerging infectious diseases and landscape genetics; food, diet, and nutrition; and urban health. \*Coverage of Middle East respiratory syndrome, Ebola, and Zika; impacts on health of global climate change; contaminated water crises in economically developed countries, including in Flint, Michigan; China's rapid industrial growth; and other timely topics. \*Updated throughout with current data and concepts plus advances in GIS. Pedagogical Features: \*End-of-chapter review questions and suggestions for further reading. \*Section Introductions that describe each chapter. \*"Quick Reviews"--within-chapter recaps of key concepts. \*Bold-faced key terms and

an end-of-book glossary.

This book provides a solid overview of what is being developed in the risk prevention and disaster management sector.

A Comparative Geography of China and the U.S. Rudi Hartmann 2014-07-17 The book is the outcome of a unique venture: a team of Chinese geographers and a team of American geographers collaborated on a new Comparative Geography of China and the United States. The book meets a high demand for comparative information about China and the United States, as the home of the two leading economies in a globalizing world. Comparisons of the two countries include the similarities and differences in their physical environments and natural hazards, the growth and changing spatial distribution of population and ethnic groups in China and the U.S., traditions and contemporary regional expressions of agriculture and food production as well as the rapidly changing urban and industrial patterns in both countries. The book also highlights the two countries' interconnectedness, in trade and in the exchange of cultural, social, scientific & technological information. The volume serves as a major resource in geographic education as it contributes to a better and more comprehensive understanding of the formation and development of the two countries' basic geographical patterns and processes.

**An Introduction to the Geography of Health** Helen Hazen 2019-11-26 In the second edition of *An Introduction to the Geography of Health*, Helen Hazen and Peter Anthamatten explore the ways in which geographic ideas and approaches can inform our understanding of health. The book's focus on a broad range of physical and social factors that drive health in places and spaces offers students and scholars an important holistic perspective on the study of health in the modern era. In this edition, the authors have restructured the book to emphasize the theoretical significance of ecological and social approaches to health. Spatial methods are now reinforced throughout the book, and other qualitative and quantitative

methods are discussed in greater depth. Data and examples are used extensively to illustrate key points and have been updated throughout, including several new extended case studies such as water contamination in Flint, Michigan; microplastics pollution; West Africa's Ebola crisis; and the Zika epidemic. The book contains more than one hundred figures, including new and updated maps, data graphics, and photos. The book is designed to be used as the core text for a health geography course for undergraduate and lower-level graduate students and is relevant to students of biology, medicine, entomology, social science, urban planning, and public health.

*Contaminated Soil'93* F. Arendt 2012-12-06 F. Arendt, XxX (Conference chairman) w. Harder, TNO (Conference co-chairman) The 1993 Berlin conference on contaminated sites is the fourth in a series of meetings initiated by the Netherlands Organization of Applied Scientific Research (TNO) in 1985 and later continued with the Karlsruhe Nuclear Research center (KfK) of Germany. The present economic stagnation or recession in many countries is leading to various proposals to reduce the level of costly environmental activities: restricted funds are used for really urgent cases rather than precautionary measures. The level of soil contamination caused by the former centrally planned economies adds to this tendency. The Conference tries to broach this controversy by discussing once more the targets and strategies of soil remediation with follow-up use of the site as an important parameter. Both new regulations and modifications of existing lists for a tolerable level of contamination are reviewed alike. Immobilization and enclosure of pollutants are often less expensive than complete remediation and, consequently, may grow in significance. We consider the conference of great significance for demonstrating the experiences gained with management and remediation of contaminated sites internationally, among others to avoid mistakes and excessive costs. Two new types of soil contamination became apparent after the end of the cold war. Many military sites, airfields and training grounds are being abandoned. After decades of use, large sections and hot spots of these sites are polluted to a high average level.
