Teaching and Christian Imagination David I. Smith 2016-01-15 This book offers an energizing Christian vision for the art of teaching. The authors – experienced teachers themselves – encourage teacher-readers to reanimate their work by imagining it differently. David Smith and Susan Felch, along with Barbara Carvill, Kurt Schaefer, Timothy Steele, and John Witvliet, creatively use three metaphors – journeys and pilgrimages, gardens and wilderness, buildings and walls – to illuminate a fresh vision of teaching and learning. Stretching beyond familiar clichés, they infuse these metaphors with rich biblical echoes and theological resonances that will inform and inspire Christian teachers everywhere.

Unshackled Clint Bolick 2021-01-01 Clint Bolick and Kate J. Hardiman begin with a thought experiment: how would we structure a 21st-century K&–12 school system if we were starting from scratch, attending to contemporary parental needs and harnessing the power of technology? Maintaining that the status quo is unacceptable, they take a forward-thinking look at how choice, competition, deregulation, and decentralization can create disruptive innovation and reform education for all students. The US Supreme Court proclaimed 65 years ago in *Brown v. Board of Education* that our schools must provide equal educational opportunities, but as Bolick and Hardiman argue we have yet to make good on that promise. School systems are bound to antiquated structures, outdated technology, and bureaucratic systems that work for adults, not children. The COVID-19 pandemic has highlighted how ossified the traditional public school system has become. Today's ruptures in traditional learning create opportunity for reinvention. *Unshackled* explains that technology can redefine the ways students learn in and out of the classroom and highlights the benefits of expanding educational freedom so that families are able to choose an education that fits their child's needs.

On the Same Track Carol Corbett Burris 2015-03-17 A public school principal's account of the courageous leaders who have dismantled the tracking systems in their schools in order to desegregate classrooms What would happen if a school eliminated the "tracks" that rank students based on their perceived intellectual abilities? Would low-achieving students fall behind and become frustrated? Would their higher-achieving peers suffer from a "watered-down" curriculum? Or is tracking itself the problem? A growing body of research shows that tracking doesn't increase learning for the minority and low-income students who are overrepresented in low-track classrooms. This de facto segregation has led many civil rights advocates to argue that tracking is turning back the clock on equal education. As a principal at a New York high school, Carol Corbett Burris believed that the curriculum for the best students was the best

curriculum for all. She helped lead a bold plan to eliminate tracking from her school, and the results couldn't have been further from the doom-and-gloom scenarios of tracking proponents. Instead, there was a dramatic improvement in the achievement of all students, across racial and socioeconomic divisions, and a near elimination of the achievement gap. Today, due to those efforts, International Baccalaureate English is the twelfth-grade curriculum for South Side students, and all students take the same challenging courses, together, to prepare them for college. In *On the Same Track*, Burris draws on her own experience, on the experiences of other schools, and on the latest research to make an impassioned case for detracking. Not only does the practice of tracking fail to benefit lower-tracked students, as Burris shows, but it also results in the resegregation of classrooms. Furthermore, she argues that many of today's popular reforms emanate from the same "sort and select" mentality that reinforces social stratification based on race and class. *On the Same Track* is a rousing, controversial, and yet optimistic account of how we need to change our assumptions and policies if we are to live up to the promise of democratic public education. Only by holding all students to the same high standards can we ensure that all have the same opportunity to live up to their full potential.

Linear Algebra and Matrix Analysis for Statistics Sudipto Banerjee 2014-06-06 Linear Algebra and Matrix Analysis for Statistics offers a gradual exposition to linear algebra without sacrificing the rigor of the subject. It presents both the vector space approach and the canonical forms in matrix theory. The book is as self-contained as possible, assuming no prior knowledge of linear algebra. The authors first address the rudimentary mechanics of linear systems using Gaussian elimination and the resulting decompositions. They introduce Euclidean vector spaces using less abstract concepts and make connections to systems of linear equations wherever possible. After illustrating the importance of the rank of a matrix, they discuss complementary subspaces, oblique projectors, orthogonality, orthogonal projections and projectors, and orthogonal reduction. The text then shows how the theoretical concepts developed are handy in analyzing solutions for linear systems. The authors also explain how determinants are useful for characterizing and deriving properties concerning matrices and linear systems. They then cover eigenvalues, eigenvectors, singular value decomposition, Jordan decomposition (including a proof), quadratic forms, and Kronecker and Hadamard products. The book concludes with accessible treatments of advanced topics, such as linear iterative systems, convergence of matrices, more general vector spaces, linear transformations, and Hilbert spaces.

A Mind at Play Jimmy Soni 2017-07-18 Winner of the Neumann Prize for the History of Mathematics "We owe Claude Shannon a lot, and Soni & Goodman's book takes a big first step in paying that debt." —San Francisco Review of Books "Soni and Goodman are at their best when they invoke the wonder an idea can instill. They summon the right level of awe while stopping short of hyperbole." —Financial Times "Jimmy Soni and Rob Goodman make a convincing case for their subtitle while reminding us that Shannon never made this claim himself." —The Wall Street Journal "A charming account of one of the twentieth century's most distinguished scientists...Readers will enjoy this portrait of a modern-day Da Vinci." —Fortune In their second collaboration, biographers Jimmy Soni and Rob Goodman present the story of Claude Shannon—one of the foremost intellects of the twentieth century and the architect of the Information Age, whose insights stand behind every computer built, email sent, video streamed, and webpage loaded. Claude Shannon was a groundbreaking polymath, a brilliant tinkerer, and a digital pioneer. He constructed the first wearable computer, outfoxed Vegas casinos, and built juggling robots. He also wrote the seminal text of the digital revolution, which has been called "the Magna Carta of the Information Age." In this elegantly written, exhaustively researched biography, Soni and Goodman reveal

Claude Shannon's full story for the first time. With unique access to Shannon's family and friends, *A Mind at Play* brings this singular innovator and always playful genius to life.

Excellence Through Equity Alan M. Blankstein 2016-02-26 *Excellence Through Equity* is an inspiring look at how real-world educators are creating schools where all students are able to thrive. In these schools, educators understand that equity is not about treating all children the same. They are deeply committed to ensuring that each student receives what he or she individually needs to develop their full potential and succeed. To help educators with what can at times be a difficult and challenging journey, Blankstein and Noguera frame the book with five guiding principles of Courageous Leadership: Getting to your core Making organizational meaning Ensuring constancy and consistency of purpose Facing the facts and your fears Building sustainable relationships. They further emphasize that the practices are grounded in three important areas of research that are too often disregarded: (1) child development, (2) neuroscience, and (3) environmental influences on child development and learning. You'll hear from Carol Corbett Burris, Michael Fullan, Marcus J. Newsome, Paul Reville, Susan Szachowicz, and other bold practitioners and visionary thinkers who share compelling and actionable ideas, strategies, and experiences for closing the achievement gap in your classrooms and school. Ensuring that all students receive an education that cultivates their talents and potential is in all our common interest. As Andy Hargreaves writes in the coda: "The opportunity for all Americans is to articulate and believe in an inspiring vision of educational change that is about what the next generation of America and Americans should become, not about a target or ranking that the nation should attain." From the Foreword by Archbishop Desmond Tutu: "Letting go of a system of winners and losers in favor of what is proposed in this book is a courageous leap forward that we all must take together. Let this bold, practical book be a guide; and may you travel into this new exciting vista, in which every child can succeed."

Navigating MathLand Linda Kasal Fusco 2017-06-21 The intent of this book is to provide a guide for parents to help them navigate the thirteen years of their children's math education (K-12). The book will provide parents with the knowledge and skills they will need to proactively advocate for their children's preparation for the 21st century workforce.

Where Wisdom May Be Found Edward P. Meadors 2019-08-29 All Christian colleges and universities hail the integration of faith and learning as a premier mission objective. There is less agreement as to what the integration of faith and learning should look like in pedagogical and cross-disciplinary terms. This volume proposes that faith and learning are interrelated from the start. Discovery of truth within the academic disciplines cultivates discipline-specific wisdom that both accords with all reality and complements the whole counsel of God. *Where Wisdom May Be Found* brings together a faculty of twenty-seven accomplished voices from across curricula to celebrate each field's capacity for revealing wisdom from all corners of God's creative design. In synthesis, these voices declare the depth and richness of the wisdom and knowledge of God for the educational advancement and holistic equipping of the corporate people of God. Contributing authors: Dorothy Chappell, Hadley Mitchell, Kenman Wong, Russ Howell, Mike Guebert, James Ault, Clinton Arnold, Kevin Vanhoozer, Jeffry Davis, Cameron Anderson, Jim Bradley, Derek Schuurman, Kersten Priest, Leland Ryken, David Entwhistle, Stephen Contakes, Rick Kennedy, James Spiegel, Arnold Sikkema, Tony Payne, Jeff Greenman, Dave Wolf, Nathan Thielman, Paul DeHart, Angela Konrad, Brian Brock

Mathematics James Nickel 2001-01-01 This book revolutionizes the prevailing understanding and teaching of math. This book is a must for all upper-level Christian school curricula and for college students and adults interested in math or related fields of science and religion. It will serve as a solid refutation for the claim, often made in court, that mathematics is one subject which cannot be taught from a distinctively biblical perspective. - Back cover.

New York Education Laws Publisher's Editorial Staff 2019-12-27 More than just a statutory compilation, *New York Education Laws* is the best way to keep up-to-date with the broad spectrum of laws impacting education in New York. With commentary on the latest laws by Thomas M. Hamilton, Esq., this volume provides readers with handy summaries of important caselaw, summaries of decisions of the Commissioner of Education, and summaries of new legislation. New York education laws are constantly in flux, and the new edition provides you with an efficient and innovative way to keep abreast of the latest changes. *New York Education Laws* is a compilation of the entire text of Education Law Titles I-VIII extracted from the New York Consolidated Laws, along with many other related statutes that touch on the administration of education in New York. It includes important topics such as school district organization, taxation and financial administration, special schools and instruction, and state and city colleges and institutions. Now, school principals, administrators, educational organizations, attorneys and state officials will have access to all education laws they need in one volume.

The Comparative Method Charles C. Ragin 2014-07-18 Charles C. Ragin's *The Comparative Method* proposes a synthetic strategy, based on an application of Boolean algebra, that combines the strengths of both qualitative and quantitative sociology. Elegantly accessible and germane to the work of all the social sciences, and now updated with a new introduction, this book will continue to garner interest, debate, and praise.

Differential Equations and Linear Algebra Charles Henry Edwards 2013-08-27 For courses in Differential Equations and Linear Algebra. Acclaimed authors Edwards and Penney combine core topics in elementary differential equations with those concepts and methods of elementary linear algebra needed for a contemporary combined introduction to differential equations and linear algebra. Known for its real-

world applications and its blend of algebraic and geometric approaches, this text discusses mathematical modeling of real-world phenomena, with a fresh new computational and qualitative flavor evident throughout in figures, examples, problems, and applications. In the Third Edition, new graphics and narrative have been added as needed—yet the proven chapter and section structure remains unchanged, so that class notes and syllabi will not require revision for the new edition.
