Erythropoietin Arthur J. Sytkowski 2006-03-06 The use of Epo in medical practice is increasing constantly. It has revolutionized how we think of blood transfusion in medicine and surgery. Moreover, it has become widely known to scientists, physicians, biotech and pharmaceutical executives and the general public. Additionally, the past ten years have seen important advances in our knowledge and understanding of its action both within and outside of the hematopoietic system. Until now, there has been no single source that contains

up-to-date information on Epo addressing the array of subjects that this book presents. The book covers all aspects from developmental biology to specific topics such as medical applications of recombinant Epo, receptor biology, mechanisms of Epo activity, structure/activity relationship, disease states and important actions on non-hematopoietic organs and tissues, including the central nervous system, heart, gastrointestinal tract, reproductive organs and endothelium.

Advances in Spatio-Temporal Analysis Xinming Tang 2007-08-23 Developments in Geographic Information Technology have raised the expectations of users. A static map is no longer enough; there is now demand for a dynamic representation. Time is of great importance when operating on real world geographical phenomena, especially when these are dynamic. Researchers in the field of Temporal Geographical Information Systems (TGIS) have been developing methods of incorporating time into geographical information systems. Spatio-temporal analysis embodies spatial modelling, spatio-temporal modelling and spatial reasoning and data mining. **Advances in Spatio-Temporal Analysis** contributes to the field of spatio-temporal analysis, presenting innovative ideas and examples that reflect current progress and achievements.
