The Hearing Eye Graham Lock 2009-01-02 The widespread presence of jazz and blues in African American visual art has long been overlooked. The Hearing Eye makes the case for recognizing the music's importance, both as formal template and as explicit subject matter. Moving on from the use of iconic musical figures and motifs in Harlem Renaissance art, this groundbreaking collection explores the more allusive - and elusive - references to jazz and blues in a wide range of mostly contemporary visual artists. There are scholarly essays on the painters Rose Piper (Graham Lock), Norman Lewis (Sara Wood), Bob Thompson (Richard H. King), Romare Bearden (Robert G. O'Meally, Johannes V?lz) and Jean-Michel Basquiat (Robert Farris Thompson), as well an account of early blues advertising art (Paul Oliver) and a discussion of the photographs of Roy DeCarava (Richard Ings). These essays are interspersed with a series of in-depth interviews by Graham Lock, who talks to quilter Michael Cummings and painters Sam Middleton, Wadsworth Jarrell, Joe Overstreet and Ellen Banks about their musical inspirations, and also looks at art's reciprocal effect on music in conversation with saxophonists Marty Ehrlich and Jane Ira Bloom. With numerous illustrations both in the book and on its companion website, The Hearing Eye reaffirms the significance of a fascinating and dynamic aspect of African American visual art that has been too long neglected.

Fostering Integrity in Research National Academies of Sciences, Engineering, and Medicine 2018-01-13 The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness, accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support â€" or distort â€" practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report Responsible Science: Ensuring the Integrity of the Research Process evaluated issues related to scientific responsibility and the conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. Responsible Science served as a valuable benchmark to set the

context for this most recent analysis and to help guide the committee's thought process. Fostering Integrity in Research identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.

Industry 4.0 for SMEs Dominik T. Matt 2020-01-03 This open access book explores the concept of Industry 4.0, which presents a considerable challenge for the production and service sectors. While digitization initiatives are usually integrated into the central corporate strategy of larger companies, smaller firms often have problems putting Industry 4.0 paradigms into practice. Small and medium-sized enterprises (SMEs) possess neither the human nor financial resources to systematically investigate the potential and risks of introducing Industry 4.0. Addressing this obstacle, the international team of authors focuses on the development of smart manufacturing concepts, logistics solutions and managerial models specifically for SMEs. Aiming to provide methodological frameworks and pilot solutions for SMEs during their digital transformation, this innovative and timely book will be of great use to scholars researching technology management, digitization and small business, as well as practitioners within manufacturing companies.

Springboard Mathematics 2014

Solving Systems of Polynomial Equations Bernd Sturmfels 2002 A classic problem in mathematics is solving systems of polynomial equations in several unknowns. Today, polynomial models are ubiquitous and widely used across the sciences. They arise in robotics, coding theory, optimization, mathematical biology, computer vision, game theory, statistics, and numerous other areas. This book furnishes a bridge across mathematical disciplines and exposes many facets of systems of polynomial equations. It covers a wide spectrum of mathematical techniques and algorithms, both symbolic and numerical.The set of solutions to a system of polynomial equations is an algebraic variety - the basic object of algebraic geometry. The algorithmic study of algebraic varieties is the central theme of computational algebraic geometry. Exciting recent developments in computer software for geometric calculations have revolutionized the field. Formerly inaccessible problems are now tractable, providing fertile ground for experimentation and conjecture. The first half of the book gives a snapshot of the state of the art of the topic. Familiar themes are covered in the first five chapters, including polynomials in one variable, Grobner bases of zero-dimensional ideals, Newton polytopes and Bernstein's Theorem, multidimensional resultants, and primary decomposition.The second half of the book explores polynomial equations from a variety of novel and unexpected angles. It introduces interdisciplinary connections, discusses highlights of current research, and outlines possible future algorithms. Topics include computation of Nash equilibria in game theory, semidefinite programming and the real Nullstellensatz, the algebraic geometry of statistical models, the piecewise-linear geometry of valuations and amoebas, and the Ehrenpreis-Palamodov theorem on linear partial differential equations with constant coefficients.Throughout the text, there are many hands-on examples and exercises, including short but complete sessions in MapleR, MATLABR, Macaulay 2, Singular, PHCpack, CoCoA, and SOSTools software. These examples will be particularly useful for readers with no background in algebraic geometry or commutative algebra. Within minutes, readers can learn how to type in polynomial equations and actually see some meaningful results on their computer screens. Prerequisites include basic abstract and computational algebra. The book is designed as a text for a graduate course in computational algebra.

The Life of Buddha Asvaghosha 2003-04 Originally written in the First Century, A.D. by Asvaghosha. This may be the oldest known story of the complete life of Buddha, having been written in the first century AD. The author was an educated ecclesiastic Buddhist who traveled throughout India collecting stories and traditions relating to the Buddhas life. He was a famous preacher and musician who then wove them into a Sanskrit poem which he performed musically during his travels. The people of India delighted in this magical tale whenever it was performed with the choir of musicians who traveled with him. It holds many facts that other biographies or stories of the Buddha dont have, which makes this work so important. The entire epic is preserved in this rare book, long out of print, which may have otherwise been lost to the western world.

A History of Burn Care Lars P Kamolz 2021-11-30 Burn injuries are still one of the most common and devastating injuries in human and the treatment of major burns remains a major challenge for physicians worldwide. Modern burn care involves many components from initial first aid, burn size and burn depth assessment, fluid resuscitation, wound care, excision and grafting/ coverage, infection control and nutritional support. Progress in each of these areas has contributed significantly to the overall enhanced survival of burn victims of the past decades. Most major advances in burn care occurred in the past 50 years, spurred on by wars and great fires. The use of systemic antibiotics and topical antiinfective agents greatly reduced sepsis related mortality. This along with the improvement of new surgical and skin grafting techniques allowed the earlier excision and coverage of deep burns which resulted in greatly improved survival rates and better functional and aesthetic outcome. In this book we look back at how the treatment of burns has evolved over the past decades and hundreds of years. The advancement of burn care has been closely associated with our deeper understanding of its pathophysiology; we have now come to understand the impact that burn injuries have in the multiple fields of current medical science i.e. in metabolism and circulation, electrolyte balance and nutrition, immunology and infection, inflammation, pulmonary function and wound healing.
