**Eating the Enlightenment** E. C. Spary 2013-04-08 Eating the Enlightenment offers a new perspective on the history of food, looking at writings about cuisine, diet, and food chemistry as a key to larger debates over the state of the nation in Old Regime France. Embracing a wide range of authors and scientific or medical practitioners—from physicians and poets to philosophes and playwrights—E. C. Spary demonstrates how public discussions of eating and drinking were used to articulate concerns about the state of civilization versus that of nature, about the effects of consumption upon the identities of individuals and nations, and about the proper form and practice of scholarship. En route, Spary devotes extensive attention to the manufacture, trade, and eating of foods, focusing upon coffee and liqueurs in particular, and also considers controversies over specific issues such as the chemistry of digestion and the nature of alcohol. Familiar figures such as Fontenelle, Diderot, and Rousseau appear alongside little-known individuals from the margins of the world of letters: the draughts-playing café owner Charles Manoury, the “Turkish envoy” Soliman Aga, and the natural philosopher Jacques Gautier d’Agoty. Equally entertaining and enlightening, Eating the Enlightenment will be an

original contribution to discussions of the dissemination of knowledge and the nature of scientific authority.

*Materials and Expertise in Early Modern Europe* Ursula Klein 2010-04-15 It is often assumed that natural philosophy was the forerunner of early modern natural sciences. But where did these sciences' systematic observation and experimentation get their starts? In *Materials and Expertise in Early Modern Europe*, the laboratories, workshops, and marketplaces emerge as arenas where hands-on experience united with higher learning. In an age when chemistry, mineralogy, geology, and botany intersected with mining, metallurgy, pharmacy, and gardening, materials were objects that crossed disciplines. Here, the contributors tell the stories of metals, clay, gunpowder, pigments, and foods, and thereby demonstrate the innovative practices of technical experts, the development of the consumer market, and the formation of the observational and experimental sciences in the early modern period. *Materials and Expertise in Early Modern Europe* showcases a broad variety of forms of knowledge, from ineffable bodily skills and technical competence to articulated know-how and connoisseurship, from methods of measuring, data gathering, and classification to analytical and theoretical knowledge. By exploring the hybrid expertise involved in the making, consumption, and promotion of various materials, and the fluid boundaries they traversed, the book offers an original perspective on important issues in the history of science, medicine, and technology.

Blindness and Enlightenment: An Essay Kate E. Tunstall 2011-08-18 Blindness and Enlightenment presents a reading and a new translation of Diderot's Letter on the Blind. Diderot was the editor of the Encyclopédie, that Trojan horse of Enlightenment ideas, as well as a novelist, playwright, art critic and philosopher. His Letter on the Blind of 1749 is essential reading for anyone interested in Enlightenment philosophy or eighteenth-century literature because it contradicts a central assumption of Western literature and philosophy, and of the Enlightenment in particular, namely that moral and philosophical insight is dependent on seeing. Kate Tunstall's essay guides the reader through the Letter, its anecdotes, ideas and its conversational mode of presenting them, and it situates the Letter in relation both to the Encyclopédie and to a rich tradition of writing about and, most importantly, talking and listening to the blind.
