Textbook of Neural Repair and Rehabilitation Michael Selzer 2014-04-24 Volume 1 of the Textbook of Neural Repair and Rehabilitation covers the basic sciences relevant to recovery of function following injury to the nervous system.

**Female Genital Mutilation** World Health Organization 1997 This document contains the joint statement of the World Health Organization (WHO), UN Children's Emergency Fund (UNICEF), and the UN Population Fund (UNFPA) on female genital mutilation. The introduction to the statement notes that the purpose of the statement is not to criticize or condemn but to allow people to understand the hazards and indignity of harmful practices and to realize that it is possible to give up harmful practices without giving up meaningful aspects of their culture.

**Practical Aspects of Knowledge Management** Dimitris Karagiannis 2004-12-01 This book contains the papers presented at the 5th International Conference on Practical Aspects of Knowledge Management organized by the Department of Knowledge Management, Institute of Computer Science and Business Informatics, University of Vienna. The event took place on December 02-03, 2004 in Vienna. The PAKM conference series offers a communication forum and meeting ground for practitioners and researchers engaged in developing and deploying advanced business solutions for the management of knowledge and intellectual capital. Contributions pursuing integrated approaches which consider organizational, technological and cultural issues of knowledge management have been elected for presentation. PAKM is a forum for people to share their views, to exchange ideas, to develop new insights, and to envision completely new kinds of solutions for knowledge management problems. The accepted papers are of high quality and are not too specialized so that the main issues can be understood by someone outside the respective field. This is crucial for an interdisciplinary exchange of ideas. Like its predecessors, PAKM 2004 featured two invited talks. It is a real joy seeing the visibility of the conference increase and noting that knowledge management researchers and practitioners from all over the world submitted papers. This year, 163 papers and case studies were submitted, from which 48 were accepted.

**Cyclotron Produced Radionuclides** International Atomic Energy Agency 2008 Application of radioisotopes has shown significant growth in the past decade, and a major factor contributing towards this growth is the availability of a large number of cyclotrons dedicated to the production of radioisotopes for medical applications. Although there are many articles in journals on cyclotrons and their use for radioisotope production, there is no single source of information for beginners on radioisotope production using cyclotrons. This publication attempts to address this deficiency. It contains chapters on accelerator technology, theoretical considerations of nuclear reactions, the technology behind targetry, techniques on preparation of targets, irradiation of targets under high beam currents, target processing and target recovery.

**Essentials of Business Analytics** Bhimasankaram Pochiraju 2019-07-10 This comprehensive edited volume is the first of its kind, designed to serve as a textbook for long-duration business analytics programs. It can also be used as a guide to the field by practitioners. The book has contributions from experts in top universities and industry. The editors have taken extreme care to ensure continuity across the chapters. The material is organized into three parts: A) Tools, B) Models and C) Applications. In Part A, the tools used by business analysts are described in detail. In Part B, these tools are applied to construct models used to solve business problems. Part C contains detailed applications in various functional areas of business and several case studies. Supporting material can be found in the appendices that develop the pre-requisites for the main text. Every chapter has a business orientation. Typically, each chapter begins with the description of business problems that are transformed into data questions; and methodology is developed to solve these questions. Data analysis is conducted using widely used software, the output and results are clearly explained at each stage of development. These are finally transformed into a business solution. The companion website provides examples, data sets and sample code for each chapter.

**Excellence in Teaching and Learning in Higher Education** Isabel Huet 2021 The initial 'idea' for the book emerged during the seminar Sharing of Innovative Pedagogical Practices that occurred at the University of Coimbra (Portugal) in 2018. Like all 'good ideas', this one originated in a conversation between colleagues from the University of Coimbra and the University of West London in the United Kingdom. The 'idea' of this book was to move away from sharing experiences related to teaching and learning in higher education in just one or two countries, but instead to organise a more European view about the policy, research and teaching practices that are shaping the way our students learn, academics teach and do research. We have a total of 16 chapters from academics in Portugal, the United Kingdom, Ireland, Sweden, the Netherlands, Spain, Italy, and the Czech Republic. The book is organised in four interrelated themes: (1) policy and quality; (2) professionalisation of teaching and academic development; (3) research and teaching nexus; and (4) pedagogy and practice. Enjoy reading the book!

*Addiction Research Methods* Peter G. Miller 2010-02-02 *Addiction Research Methods* is a comprehensive handbook for health professionals, policy-makers and researchers working and training in the field of addiction. The book provides a clear, comprehensive and practical guide to research design, methods and analysis within the context of the field of alcohol and other drugs. The reader is introduced to fundamental principles and key issues; and is orientated to available sources of information and key literature. Written by a team of internationally acclaimed contributors, the book is divided into six major sections: Introduction; Research

Design; Basic Toolbox; Biological Models; Specialist Methods; and Analytical Methods. Each chapter offers an introduction to the background and development of the discipline in question, its key features and applications, how it compares to other methods/analyses and its advantages and limitations. FEATURES List of useful websites and assistive technology. Case study examples List of useful hermeneutics Recommended reading list Contains exercises to help the reader to develop their skills.

*Principles of Data Mining* David J. Hand 2001-08-17 The first truly interdisciplinary text on data mining, blending the contributions of information science, computer science, and statistics. The growing interest in data mining is motivated by a common problem across disciplines: how does one store, access, model, and ultimately describe and understand very large data sets? Historically, different aspects of data mining have been addressed independently by different disciplines. This is the first truly interdisciplinary text on data mining, blending the contributions of information science, computer science, and statistics. The book consists of three sections. The first, foundations, provides a tutorial overview of the principles underlying data mining algorithms and their application. The presentation emphasizes intuition rather than rigor. The second section, data mining algorithms, shows how algorithms are constructed to solve specific problems in a principled manner. The algorithms covered include trees and rules for classification and regression, association rules, belief networks, classical statistical models, nonlinear models such as neural networks, and local "memory-based" models. The third section shows how all of the preceding analysis fits together when applied to real-world data mining problems. Topics include the role of metadata, how to handle missing data, and data preprocessing.

**Wine and Society** Stephen Charters 2006 Wine is becoming increasingly popular in the Anglophone world and there are many books available which describe how and where it is made. However, none address the fundamental questions of different structures of production and how the consumer relates to the product - this book is the first to do just that. *Wine and Society: the cultural and social context of wine production and consumption* looks at the relationship between wine production and marketing, focussing in consumer behaviour and cultural attitudes. Divided into four parts, it examines the context of wine production, the wine consumer and the social context of wine, discussing the following themes: \* That the core of wine production and consumption is shaped by historical, geographical and cultural factors. \* Wine production - European and new world looking at the different kinds of producer and how the varying background of each shapes their perspective on what they produce \* Terroir and appellations: why demarcation and sense of place became important, how they are used to achieve marketing differentiation, and the 'benefits' (or otherwise) to the customer. \* The contemporary wine consumer and lifestyle factors - looking at wine clubs, tourism, education, culture and literature \* The politics and economics of wine - from supporting rural industries in France to protecting customers from deception and health risks. Suitable for third year and post-graduate students of hospitality, wine (both in production and marketing), wine tourism, gastronomy and related courses, it encourages students to think critically about the issues raised by using real life case studies and examples from around the world, also including press releases and marketing campaigns.

Stress and Cardiovascular Disease Paul Hjerdahl 2011-10-01 The main aim of this book is to evaluate the concept of stress and provide tools for physicians to identify patients who might benefit from stress management. This will incorporate a detailed description of the physiological and pathophysiological consequences of acute and chronic stress that might lead to cardiovascular disease. The book will aim to critically evaluate interventional research (behavioural and other therapies) and provide evidence based recommendations on how to manage stress in the cardiovascular patient. Our intentions are to define and highlight stress as an etiological factor for cardiovascular disease, and to describe an evidence based "tool box" that physicians may use to identify and manage patients in whom stress may be an important contributing factor for their disease and their risk of suffering cardiovascular complications.

*Principles of Marketing* Gary M. Armstrong 2018 An introduction to marketing concepts, strategies and practices with a balance of depth of coverage and ease of learning. Principles of Marketing keeps pace with a rapidly changing field, focussing on the ways brands create and capture consumer value. Practical content and linkage are at the heart of this edition. Real local and international examples bring ideas to life and new feature 'linking the concepts' helps students test and consolidate understanding as they go. The latest edition enhances understanding with a unique learning design including revised, integrative concept maps at the start of each chapter, end-of-chapter features summarising ideas and themes, a mix of mini and major case studies to illuminate concepts, and critical thinking exercises for applying skills.

Pharmacotherapy of Depression Domenic A. Ciraulo 2010-12-28 Comprehensive and state of the art, the second edition of Pharmacotherapy of Depression offers major revisions of every chapter and the addition of new chapters by expert contributors. The first chapter reviews the neurobiology of depression, which lays the groundwork for understanding the mechanisms of action of antidepressants. In the next chapter, a review of the general principles guiding the diagnosis and medication treatment of unipolar depression is provided. The clinical pharmacology of antidepressants is reviewed in some detail, supplemented by tables that provide information on dosing, indications, and metabolism. Augmentation strategies are reviewed, including the use of non-traditional agents. The chapters that follow next address the use of antidepressants in special populations, such as the elderly and depressed individuals with psychosis, bipolar disorder, substance abuse, and post traumatic stress disorder. The complex issues involving the diagnosis and treatment of depression during pregnancy is thoroughly reviewed in Chapter 8 and provides a synthesis of the scientific literature in the area, one that is noted for contradictory and controversial findings, as well as guidelines for prescribing. The next chapter then provides an overview of the treatment of depression in the pediatric population, highlighting clinical concerns such as suicide risk. The book concludes with two chapters at the interface of medicine and psychiatry in the treatment

of mood disorders: managing depression in primary care settings and depression associated with medical illnesses. The outstanding clinician-scientists who have contributed to this volume are all leaders in their fields and represent a broad spectrum of renowned institutions. A timely contribution to the literature, *The Pharmacotherapy of Depression, Second Edition*, offers busy clinicians from many disciplines a strong scientific foundation that seamlessly transitions into practical recommendations for clinical practice. The result is another gold-standard guide to the safe and effective use of the latest antidepressant medications.

Pre-text, Text, Context Robert L. Mitchell 1980 The nineteenth century in France is a nightmare for literary historians. Their thirst for categorization is more easily quenched by prior centuries, to which, because they seem unified by cohesive preoccupations and common goals, such appellations as the Renaissance, the Classical Age or *le grand siècle*, and the Enlightenment or Age of Ideas are appropriately applied. For the protean nineteenth century, for which no such handy tag has been or can be devised, is beyond all else distinguished by extreme heterogeneity and eclecticism. A period of chaotic social and political instability, of scientific and industrial revolution, it is, in literature, a time, not of solidarity, but of unprecedented individualism. Collective social consciousness yields to isolated probings into the uncharted recesses of the human mind and soul, and revolt against standardized (even valorized) literary practice is seen in such developments as the slow undermining of the "accepted" literary lexicon, and of the qualities of unity, clarity, and reason, and in a radical overhauling of the system of prosody. If such diversity precludes coherence in nineteenth-century French literature, it can itself be recognized as the organizing element of this literary epoch. And it is precisely this paradox that the essays in this volume intend to reflect. They are not unified, as orthodoxy might dictate, by a common approach or theme or author. Rather they are marked, as was the century that is their context, by divergence and variety, not harmony and consistency. Multiformity in theme is reflected in discussions of such varied topics as pygmalionism, allegory, mirage, self-consciousness, plagiarism, madness, feminism, the grotesque, dance, and alchemy, which are addressed, in turn, from a variety of critical approaches: thematic, intertextual, historical, stylistic, psychocritical, sociological, and semiotic. Eclecticism, indeed, has shaped the basic conception of the collection. Part 1 examines themes, presented as "pretext", that inform either authorial motivation or the orientation of a text prior to its actual inscription. Part 2 approaches the process of writing from the perspective of the text itself. And Part 3 is concerned with those spatial, temporal, and linguistic elements (context) that surround the literary text.

The Economics of Intellectual Property. Suggestions for Further Research in Developing Countries and Countries with Economies in Transition World Intellectual Property Organization 2009-01-01 The series of papers in this publication were commissioned from renowned international economists from all regions. They review the existing empirical literature on six selected themes relating to the economics of intellectual property, identify the key research questions, point out research gaps and explore possible avenues for future research.

Preventing Reading Difficulties in Young Children National Research Council 1998-07-22 While most children learn to read fairly well, there remain many young Americans whose futures are imperiled because they do not read well enough to meet the demands of our competitive, technology-driven society. This book explores the problem within the context of social, historical, cultural, and biological factors. Recommendations address the identification of groups of children at risk, effective instruction for the preschool and early grades, effective

approaches to dialects and bilingualism, the importance of these findings for the professional development of teachers, and gaps that remain in our understanding of how children learn to read. Implications for parents, teachers, schools, communities, the media, and government at all levels are discussed. The book examines the epidemiology of reading problems and introduces the concepts used by experts in the field. In a clear and readable narrative, word identification, comprehension, and other processes in normal reading development are discussed. Against the background of normal progress, *Preventing Reading Difficulties in Young Children* examines factors that put children at risk of poor reading. It explores in detail how literacy can be fostered from birth through kindergarten and the primary grades, including evaluation of philosophies, systems, and materials commonly used to teach reading.

**Reading the Red Book** Sanford L. Drob 2012-06-01 The long-awaited publication of C.G. Jung's *Red Book* in October, 2009 was a signal event in the history of analytical psychology. Hailed as the most important work in Jung's entire corpus, it is as enigmatic as it is profound. *Reading The Red Book* by Sanford L. Drob provides a clear and comprehensive guide to *The Red Book's* narrative and thematic content, and details *The Red Book's* significance, not only for psychology but for the history of ideas.

*The Order of Things* Michel Foucault 2005-08-18 When one defines "order" as a sorting of priorities, it becomes beautifully clear as to what Foucault is doing here. With virtuoso showmanship, he weaves an intensely complex history of thought. He dips into literature, art, economics and even biology in *The Order of Things*, possibly one of the most significant, yet most overlooked, works of the twentieth century. Eclipsed by his later work on power and discourse, nonetheless it was *The Order of Things* that established Foucault's reputation as an intellectual giant. Pirouetting around the outer edge of language, Foucault unsettles the surface of literary writing. In describing the limitations of our usual taxonomies, he opens the door onto a whole new system of thought, one ripe with what he calls "exotic charm". Intellectual pyrotechnics from the master of critical thinking, this book is crucial reading for those who wish to gain insight into that odd beast called Postmodernism, and a must for any fan of Foucault.

*Advances in Advertising Research X* Enrique Bigne 2019-10-05 This book addresses challenges and opportunities in research and management related to new advertising and consumer practices in brand communications with multiple touchpoints. It specifically relates to new

insights into how profitability and customer engagement are affected by multiple and very diverse consumer touchpoints in an omni-connected world. Advances in Advertising Research are published by the European Advertising Academy (EAA). This volume is a selective collection of research presented at the 17th International Conference in Advertising (ICORIA), which was held in Valencia (Spain) in June 2018. The conference gathered more than 180 participants from over 27 countries all over the world.

**Collection of Essays by Legal Advisers of States, Legal Advisers of International Organizations and Practitioners in the Field of International Law** United Nations. Office of Legal Affairs 1999 The world has changed radically since 1989, when the General Assembly declared the period from 1990 to 1999 as the United Nations Decade of International Law. During that time, the international community claimed some major achievements as reflected by the adoption of conventions and treaties. This publication presents a collection of essays from legal advisers of States and international organizations, all of whom are among those committed to promoting respect for international law. Their contribution provides a practical perspective on international law, viewed from the standpoint of those involved in its formation, application and administration.

*The Black Books (Slipcased Edition) (Vol. Seven-Volume Set)* C. G. Jung 2020-10-13 Until now, the single most important unpublished work by C.G. Jung—The Black Books. In 1913, C.G. Jung started a unique self- experiment that he called his “confrontation with the unconscious”: an engagement with his fantasies in a waking state, which he charted in a series of notebooks referred to as The Black Books. These intimate writings shed light on the further elaboration of Jung’s personal cosmology and his attempts to embody insights from his self- investigation into his life and personal relationships. The Red Book drew on material recorded from 1913 to 1916, but Jung actively kept the notebooks for many more decades. Presented in a magnificent, seven-volume boxed collection featuring a revelatory essay by noted Jung scholar Sonu Shamdasani—illuminated by a selection of Jung’s vibrant visual works—and both translated and facsimile versions of each notebook, The Black Books offer a unique portal into Jung’s mind and the origins of analytical psychology.

Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Results (rev. Ed.) Barry N. Taylor 2009-11 Results of measurements and conclusions derived from them constitute much of the technical information produced by the National Institute of Standards and Technology (NIST). In July 1992 the Director of NIST appointed an Ad Hoc Committee on Uncertainty Statements and charged it with recommending a policy on this important topic. The Committee concluded that the CIPM approach could be used to provide quantitative expression of measurement that would satisfy NIST’s customers’ requirements. NIST initially published a Technical Note on this issue in Jan. 1993. This 1994 edition addresses the most important questions raised by recipients concerning some of the points it addressed and some it did not. Illustrations.

**Ethics in Real Estate** Stephen E. Roulac 2013-04-17 ethics." Certainly our industry is bound by the formal constraints of law in national, state, and local jurisdictions. What this volume reminds us, however, is that those laws are only as good as the personal "sea of ethics" in

which each of us operates. THE ETHICS OF PROPERTY INVOLVEMENTS Stephen E. Roulac The Roulac Group San Rafael, California and Visiting Professor University of Ulster Ethical considerations are a dominant theme in the management literature. As "Ethics and ethical issues surround our lives, ... ethics has become one of the most rapidly growing areas of management research, with over 800 articles and 1,400 books appearing since 1990" (Schminke, Ambrose, and Miles, 1998). Compared to business and business management, however, the research and writing on real estate in an ethics context is in the very early stages of development. The lack of a developed literature on ethics in real estate is reflected in the response by one highly placed executive to my solicitation for funding to support the publication of this volume: "I didn't know there were any ethics in real estate!" Fortunately, the Summa Corporation and the American Real Estate Society believe in the importance of ethics in real estate, for their cosponsorship has made possible this special monograph on the subject of Ethics in Real Estate. The support of the Summa Corporation and the American Real Estate Society of this pioneering volume is warmly and appreciatively acknowledged.

**The State of World Fisheries and Aquaculture 2020** FAO 2020-06-01 The 2020 edition of The State of World Fisheries and Aquaculture has a particular focus on sustainability. This reflects a number of specific considerations. First, 2020 marks the twenty-fifth anniversary of the Code of Conduct for Responsible Fisheries (the Code). Second, several Sustainable Development Goal indicators mature in 2020. Third, FAO hosted the International Symposium on Fisheries Sustainability in late 2019, and fourth, 2020 sees the finalization of specific FAO guidelines on sustainable aquaculture growth, and on social sustainability along value chains. While Part 1 retains the format of previous editions, the structure of the rest of the publication has been revised. Part 2 opens with a special section marking the twenty fifth anniversary of the Code. It also focuses on issues coming to the fore, in particular, those related to Sustainable Development Goal 14 and its indicators for which FAO is the "custodian" agency. In addition, Part 2 covers various aspects of fisheries and aquaculture sustainability. The topics discussed range widely, from data and information systems to ocean pollution, product legality, user rights and climate change adaptation. Part 3 now forms the final part of the publication, covering projections and emerging issues such as new technologies and aquaculture biosecurity. It concludes by outlining steps towards a new vision for capture fisheries. The State of World Fisheries and Aquaculture aims to provide objective, reliable and up-to-date information to a wide audience - policymakers, managers, scientists, stakeholders and indeed everyone interested in the fisheries and aquaculture sector.

*Handbook of Sepsis* W. Joost Wiersinga 2018-04-13 This practically oriented book provides an up-to-date overview of all significant aspects of the pathogenesis of sepsis and its management, including within the intensive care unit. Readers will find information on the involvement of the coagulation and endocrine systems during sepsis and on the use of biomarkers to diagnose sepsis and allow early intervention. International clinical practice guidelines for the management of sepsis are presented, and individual chapters focus on aspects such as fluid resuscitation, vasopressor therapy, response to multiorgan failure, antimicrobial therapy, and adjunctive immunotherapy. The closing section looks forward to the coming decade, discussing novel trial designs, sepsis in low- and middle-income countries, and emerging management approaches. The book is international in scope, with contributions from leading experts worldwide. It will be of value to residents and professionals/practitioners in the fields of infectious diseases and internal medicine, as well as to GPs and medical

students.

The Geography of Transport Systems Jean-Paul Rodrigue 2013-07-18 Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of The Geography of Transport Systems has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to further reading and websites. The website can be accessed at: <http://people.hofstra.edu/geotrans> This text is an essential resource for undergraduates studying transport geography, as well as those interest in economic and urban geography, transport planning and engineering.

**Theories of Scientific Method** Robert Nola 2014-12-18 What is it to be scientific? Is there such a thing as scientific method? And if so, how might such methods be justified? Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method. Although for many scientists their understanding of method is something they just pick up in the course of being trained, Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is, rather than leave it as some unfathomable mystery. They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated. This book begins with the question of what methodology might mean and explores the notions of values, rules and principles, before investigating how methodologists have sought to show that our scientific methods are rational. Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction, IBE, and hypothetico-deductivism. Part 3 introduces probabilistic modes of reasoning, particularly Bayesianism in its various guises, and shows how it is able to give an account of many of the values and rules of method. Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper, Lakatos, Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine, Laudan and Rescher. This book offers readers a comprehensive introduction to the idea of scientific method and a wide-ranging discussion of how historians of science, philosophers of science and scientists have grappled with the question over the last fifty years.
