Kowalski 2012-05-08 A lighthearted meditation on the philosophical quandaries of the hit television show The Big Bang Theory Ever wonder what Aristotle might say about the life Sheldon Cooper leads? *Power and Prestige: the Art of Clubs in Oceania* Steven Hooper 2022-03-22 A fresh look at the many meanings and forms of the club across two centuries of Oceanic culture Featuring more than 150 clubs made in the 18th and 19th centuries from across a vast geographical and cultural span, Power and Prestige explores a fascinating Oceanic object form that has long been misunderstood by Western scholars. From Australia, Polynesia, Melanesia and New Zealand to Hawaii, Easter Island and the Marquesas Islands, carved clubs have played many roles beyond combat in Oceanic cultures. The range in the size of works presented here--from

15 inches to more than six feet, and made in materials ranging from nephrite and wood to whalebone--points to this diversity of utility and form. In this abundantly illustrated volume, essays detail the clubs' use as ritual and religious objects, mediums of exchange, status symbols and more. Other texts break down the specific function clubs performed within each culture, as well as the symbolic meaning of the beautiful images and patterns inscribed on them.

*Car Racing 1967 Hb* Johnny Rives 2021-03-08 The third volume in the 'Car Racing' collection, 1967 bears witness to the gradual appearance of color. Photographers henceforth juggled rolls of both black & white and color film as they ventured as close as possible to the drivers and throngs entranced with speed and competition. Industries and automobile marques understood the full import of the tremendous platform motorsport offered them, and became ever more enthusiastic to share their stories and victories with the public. Many are mentioned in these pages, including Ford's extraordinary epic with the Cosworth engine and triumph at Le Mans. This volume also showcases portraits of drivers from François Cevert to Bruce McLaren, and touches on the careers of legendary designers such as Jean R  d  l  , Colin Chapman and Jim Hall... In their lively commentary, Johnny Rives and Manou Zurini take evident pleasure in recalling old acquaintances from the pitched fever of the track, joyfully sharing their knowledge through anecdotes and memories. Text in English and French.

*Alfa Romeo TZ-TZ2* Vitto Witting da Prato 2017-02-01 Having left motor racing in the early 1950s - at least officially - Alfa Romeo returned to the sport once again at the start of the following decade due to the commitment and enthusiasm of Autodelta. This Alfa offshoot distinguished itself by preparing and racing about 30 of the manufacturer's different cars that really did make history. Among them, the Giulia TZ holds a place at the head of the crowd. It had a 1.5-litre, 113 hp engine from the Giulia SS, front and rear suspension of modern conception, disc brakes and an especially bold body shaped by Zagato on a modern tubular chassis. Those were the strong points of this car, which scored results of absolute prestige in its brief career at Sebring, in the Targa Florio, the 24 Hours of Le Mans and the

Tour de France. Vito Witting da Prato, already the author of a meticulously written book on the Alfa Romeo SZ, covers the winning, human, technical and sporting factors of this unforgettable car in a monumental work. A book which, to the precise text and painstaking historical reconstruction, has been added illustrations of previously unpublished pictures and technical designs by Autodelta.

**The Russian Revolution and Stalinism** Graeme Gill 2021-04-26 This book focuses upon significant aspects of Stalinism as a system in the USSR. It sheds new light on established questions and addresses issues that have never before been raised in the study of Stalinism. Stalinism constitutes one of the most striking and contentious phenomena of the twentieth century. It not only transformed the Soviet Union into a major military-industrial power, but through both the Second World War and the ensuing Cold War, and its effect on the political Left throughout much of the world, it also transformed much of that world. This collection of papers by an international cast of authors investigates a variety of major aspects of Stalinism. Significant new questions – like the role of private enterprise and violence in state-making – as well as some of the more established questions – like the number of Soviet citizens who died in the Second World War, whether agricultural collectivisation was genocidal, nationality policy, the politics of executive power, and the Leningrad affair – are addressed here in innovative and stimulating ways. The chapters in this book were originally published as a special issue of Europe-Asia Studies.

Law and Intersystemic Communication Assoc Prof Gorm Harste 2013-04-28 With contributions from experts in the field of sociology of law, this book provides an overview of current perspectives on socio-legal studies. It focuses particularly on the relationship between law and society described in recent social systems theory as 'structural coupling'. The first part of the book presents a reconstruction of theoretical tendencies in the field of

socio-legal studies, characterised by the emergence of a transnational model of legal systems no longer connected to territorial borders and culturally specific aspects of single legal orders. In the following parts of the book, the contributions analyse some concrete cases of interrelation between law and society from an empirical and theoretical perspective.

Gender and Assimilation in Modern Jewish History Paula E. Hyman 2017-05-01 Paula Hyman broadens and revises earlier analyses of Jewish assimilation, which depicted ♦the Jews♦ as though they were all men, by focusing on women and the domestic as well as the public realms. Surveying Jewish accommodations to new conditions in Europe and the United States in the years between 1850 and 1950, she retrieves the experience of women as reflected in their writings--memoirs, newspaper and journal articles, and texts of speeches--and finds that Jewish women♦s patterns of assimilation differed from men♦s and that an examination of those differences exposes the tensions inherent in the project of Jewish assimilation. Patterns of assimilation varied not only between men and women but also according to geographical locale and social class. Germany, France, England, and the United States offered some degree of civic equality to their Jewish populations, and by the last third of the nineteenth century, their relatively small Jewish communities were generally defined by their middle-class characteristics. In contrast, the eastern European nations contained relatively large and overwhelmingly non-middle-class Jewish population. Hyman considers how these differences between East and West influenced gender norms, which in turn shaped Jewish women♦s responses to the changing conditions of the modern world, and how they merged in the large communities of eastern European Jewish immigrants in the United States. The book concludes with an exploration of the sexual politics of Jewish identity. Hyman argues that the frustration of Jewish men at their ♦feminization♦ in societies in which they had achieved political equality and economic success was manifested in their criticism of, and distancing

from, Jewish women. The book integrates a wide range of primary and secondary sources to incorporate Jewish women's history into one of the salient themes in modern Jewish history, that of assimilation. The book is addressed to a wide audience: those with an interest in modern Jewish history, in women's history, and in ethnic studies and all who are concerned with the experience and identity of Jews in the modern world.

**Nanocomputers and swarm intelligence** Jean-Baptiste Waldner 2008 For the last 50 years, the power of integrated circuits has continued to grow. This book introduces the principles of quantic computing, the use of nano-tubes in molecular transistors and ADN computing. It suggests new fabrication methods for the 21st century and introduces new architecture models, ranging from the most conventional to the most radical. Using a chronological theme, it explains our unavoidable entry in the nano-device world: from the 1948 transistor to the microchip. It concludes by anticipating the changes in daily living: investments, impact on coding activities, nanocomputing systems implementation and IT job mutation.
