High Performance and Optimum Design of Structures and Materials III W. P. De Wilde 2018-12-03 Papers presented at the 2018 International Conference on High Performance and Optimum Design of Structures and Materials are contained in this volume. These papers address issues involving advanced types of structures, particularly those based on new concepts or new materials and their system design. The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace, aeronautical applications or the automotive industry, but affects all engineering fields including those such as civil engineering and architecture. Most high performance structures require the development of a generation of new materials, which can more easily resist a range of external stimuli or react in a non-conventional manner. Particular emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling, control and management. Optimisation problems discussed in this book involve those related to size, shape and topology of structures and materials. Optimisation techniques have much to offer to those involved in the design of new industrial products. The development of new algorithms and the appearance of powerful commercial computer codes with easy to use graphical interfaces has created a

fertile field for the incorporation of optimisation in the design process in all engineering disciplines. The latest developments in design, optimisation, manufacturing and experimentation are highlighted in this book.

EBOOK: Operations Management in the Supply Chain: Decisions and Cases

*Risks & Deterrents in Construction Projects* Pawan Dua 2021-01-16 Risks add threats and thrills in projects. Risks have the ability to fail or cause losses, or even doom to projects. Projects always have higher risks than reflected in the risk registers. Under the current VUCA environment, construction projects are exposed to the highest risks, uncertainties and deterrents. The best-planned projects also encounter risks and even experts cannot zero down the risks completely. Thus, it needs a culture, system and spirit to manage risks. By applying risk management, teams can curb the impact and probability of negative risks and exploit and enhance opportunities in projects. The objective of the book is to inculcate the culture of professional risk management, involving subject specialists and conduct risk management in a structured manner. It is not the exclusive responsibility of the sales manager, tender manager, project manager, lawyers and risk experts to manage risks, rather a collective responsibility of the entire team and organization. This book is a bible to support professionals who are practising or willing to make their career in the management of construction, risks, contracts, or project domains.
