Musicians' Mobilities and Music Migrations in Early Modern Europe Gesa zur Nieden 2016-10-31 During the 17th and 18th century musicians' mobilities and migrations are essential for the European music history and the cultural exchange of music. Adopting viewpoints that reflect different methodological approaches and diversified research cultures, the book presents studies on central scopes, strategies and artistic outcomes of mobile and migratory musicians as well as on the transfer of music. By looking at elite and non-elite musicians and their everyday mobilities to major and minor centers of music production and practice, new biographical patterns and new stylistic paradigms in the European East, West and South emerge.

Advancing the Science of Climate Change National Research Council 2011-01-10 Climate change is occurring, is caused largely by human activities, and poses significant risks for-and in many cases is already affecting-a broad range of human and natural systems. The compelling case for these conclusions is provided in *Advancing the Science of Climate Change*, part of a congressionally requested suite of studies known as America's Climate Choices. While noting that there is always more to learn and that the scientific process is never closed, the book shows that hypotheses about climate change are supported by multiple lines of evidence and have stood firm in the face of serious debate and careful evaluation of alternative explanations. As decision makers respond to these risks, the nation's scientific enterprise can contribute through research that improves understanding of the causes and consequences of climate change and also is useful to decision makers at the local, regional, national, and international levels. The book identifies decisions being made in 12 sectors, ranging from agriculture to transportation, to identify decisions being made in response to climate change. *Advancing the Science of Climate Change* calls for a single federal entity or program to coordinate a national, multidisciplinary research effort aimed at improving both understanding and responses to climate change. Seven cross-cutting research themes are identified to support this scientific enterprise. In addition, leaders of federal climate research should redouble efforts to deploy a comprehensive climate observing system, improve climate models and other analytical tools, invest in human capital, and improve linkages between research and decisions by forming partnerships with action-oriented programs.

Affective Trajectories Hansjörg Dilger 2020-02-28 The contributors to *Affective Trajectories* examine the mutual and highly complex entwinements between religion and affect in urban Africa in the early twenty-first century. Drawing on ethnographic research throughout the continent and in African diasporic communities abroad, they trace the myriad ways religious ideas, practices, and materialities interact with affect to configure life in urban spaces. Whether examining the affective force of the built urban environment or how religious practices contribute to new forms of attachment, identification, and place-making, they illustrate the force of affect as it is shaped by temporality and spatiality in the religious lives of individuals and communities. Among other topics, they explore Masowe Apostolic Christianity in relation to experiences of displacement in Harare, Zimbabwe; Muslim identity, belonging, and the global ummah in Ghana; crime, emotions, and conversion to neo-Pentecostalism in Cape Town; and spiritual cleansing in a Congolese branch of a Japanese religious movement. In so doing, the contributors demonstrate how the social and material living conditions of African cities generate diverse affective forms of religious experiences in ways that foster both localized and transnational paths of emotional knowledge. Human Exploitation and Biodiversity Conservation David L. Hawksworth 2008-01-03 This book presents a wide range of contributions addressing diverse aspects of biodiversity exploitation and conservation. These collectively provide a snapshot of ongoing action and state-of-the-art research, rather than a series

of necessarily more superficial overviews. Examples presented here derive from studies in 17 countries including Africa, Asia, Europe, and North and South America. These reports will stimulate future work toward attaining a sustainable balance between the conservation and exploitation of biodiversity.

Climate Time Series Analysis Manfred Mudelsee 2010-08-26 Climate is a paradigm of a complex system. Analysing climate data is an exciting challenge, which is increased by non-normal distributional shape, serial dependence, uneven spacing and timescale uncertainties. This book presents bootstrap resampling as a computing-intensive method able to meet the challenge. It shows the bootstrap to perform reliably in the most important statistical estimation techniques: regression, spectral analysis, extreme values and correlation. This book is written for climatologists and applied statisticians. It explains step by step the bootstrap algorithms (including novel adaptations) and methods for confidence interval construction. It tests the accuracy of the algorithms by means of Monte Carlo experiments. It analyses a large array of climate time series, giving a detailed account on the data and the associated climatological questions. This makes the book self-contained for graduate students and researchers.

Guidelines on recreational water quality. Volume 1 World Health Organization 2021-07-12 Use of coastal, estuarine and freshwater recreational environments has significant benefits for health and well-being, including rest, relaxation, exercise, cultural and religious practices, and aesthetic pleasure, while also providing substantial local, regional and national economic benefits. These guidelines focus on water quality management for coastal and freshwater environments to protect public health. The guidelines: 1.

describe the current state of knowledge about the possible adverse health impacts of various forms of water pollution; and 2. set out recommendations for setting national health-based targets, conducting surveillance and risk assessments, putting in place systems to monitor and control risks, and providing timely advice to users on water safety. These guidelines are aimed at national and local authorities, and other entities with an obligation to exercise due diligence relating to the safety of recreational water sites. They may be implemented in conjunction with other measures for water safety (such as drowning prevention and sun exposure) and measures for environmental protection of recreational water use sites.

High-Performance Modelling and Simulation for Big Data Applications Joanna Kołodziej 2019-03-25 This open access book was prepared as a Final Publication of the COST Action IC1406 “High-Performance Modelling and Simulation for Big Data Applications (cHiPSet)” project. Long considered important pillars of the scientific method, Modelling and Simulation have evolved from traditional discrete numerical methods to complex data-intensive continuous analytical optimisations. Resolution, scale, and accuracy have become essential to predict and analyse natural and complex systems in science and engineering. When their level of abstraction raises to have a better discernment of the domain at hand, their representation gets increasingly demanding for computational and data resources. On the other hand, High Performance Computing typically entails the effective use of parallel and distributed processing units coupled with efficient storage, communication and visualisation systems to underpin complex data-intensive applications in distinct scientific and technical domains. It is then arguably required to have a seamless interaction of High Performance Computing with Modelling and Simulation in order to store, compute, analyse, and visualise large data sets in science and engineering. Funded by the European Commission, cHiPSet has provided a dynamic trans-European forum for their members and distinguished guests to openly discuss novel perspectives and topics of interests for these two communities. This cHiPSet compendium presents a set of selected case studies related to healthcare, biological data, computational advertising, multimedia, finance, bioinformatics, and telecommunications.

Principles of Glacier Mechanics Roger LeB. Hooke 2019-12-05 The third edition of this successful textbook will supply advanced undergraduate and graduate students with the tools they need to understand modern glaciological research. Practicing glacial geologists and glaciologists will also find the volume useful as a reference book. Since the second edition, three-quarters of the chapters have been updated, and two new chapters have been added. Included in this edition are noteworthy new contributions to our understanding of important concepts, with over 170 references to papers published since the second edition went to press. The book develops concepts from the bottom up: a working knowledge of calculus is assumed, but beyond that, the important physical concepts are developed from elementary principles. Emphasis is placed on connections between modern research in glaciology and the origin of features of glacial landscapes. Student exercises are included.

Glaciers and the Changing Earth System Mark Dyurgerov 2005

Global Land Ice Measurements from Space Jeffrey S. Kargel 2014-07-08 An international team of over 150 experts provide up-to-date satellite imaging and quantitative analysis of the state and dynamics of the glaciers around the world, and they provide an in-depth review of analysis methodologies. Includes an e-published supplement. Global Land Ice Measurements from Space - Satellite Multispectral Imaging of Glaciers (GLIMS book for short) is the leading state-of-the-art technical and interpretive presentation of satellite image data and analysis of the changing state of the world's glaciers. The book is the most definitive, comprehensive product of a global glacier remote sensing consortium, Global Land Ice

Measurements from Space (GLIMS, <http://www.glims.org>). With 33 chapters and a companion e-supplement, the world's foremost experts in satellite image analysis of glaciers analyze the current state and recent and possible future changes of glaciers across the globe and interpret these findings for policy planners. Climate change is with us for some time to come, and its impacts are being felt by the world's population. The GLIMS Book, to be released about the same time as the IPCC's 5th Assessment report on global climate warming, buttresses and adds rich details and authority to the global change community's understanding of climate change impacts on the cryosphere. This will be a definitive and technically complete reference for experts and students examining the responses of glaciers to climate change. World experts demonstrate that glaciers are changing in response to the ongoing climatic upheaval in addition to other factors that pertain to the circumstances of individual glaciers. The global mosaic of glacier changes is documented by quantitative analyses and are placed into a perspective of causative factors. Starting with a Foreword, Preface, and Introduction, the GLIMS book gives the rationale for and history of glacier monitoring and satellite data analysis. It includes a comprehensive set of six "how-to" methodology chapters, twenty-five chapters detailing regional glacier state and dynamical changes, and an in-depth summary and interpretation chapter placing the observed glacier changes into a global context of the coupled atmosphere-land-ocean system. An accompanying e-supplement will include oversized imagery and other highly visual renderings of scientific data.

The Fall of the House of Usher Edgar Allan Poe 2021-08-19 The Fall of the House of Usher Edgar Allan Poe - Roderick Usher is ill, but not due to any normal causes. When the narrator of the story arrives at the House of Usher, he finds that all is not well in the old ancestral home. The house itself appears to be almost alive, and the illness of Madeline, Roderick's sister, is not all it seems. The Fall of the House of Usher by Edgar Allan Poe is a classic short story first in 1839, and was memorably adapted for film by Roger Corman in 1960. The Fall of the House of Usher is in the opinion of many scholars Poe's most famous work of prose. This unsettling macabre work is viewed as a masterpiece of American Gothic literature. Indeed, as in many of his tales, Poe borrows much from the Gothic tradition. Still, as G. R. Thomson writes in his Introduction to Great Short Works of Edgar Allan Poe: "the tale has long been hailed as a masterpiece of Gothic horror; it is also a masterpiece of dramatic irony and structural symbolism." The Fall of the House of Usher has also been criticized for being too formulaic. Poe was criticized for following his own patterns established in works like Morella and Ligeia using stock characters in stock scenes and situations. Repetitive themes like an unidentifiable disease, madness, and resurrection are also criticized. However, there is speculation that Poe used a real-life incident as the basis for his story: the entombment of two lovers at Usher House in Boston, whose bodies were discovered when the house was demolished in 1800. Scholars speculate that Poe, who was an influence on Herman Melville, inspired the character of Ahab in Melville's novel Moby-Dick. John McAleer maintained that the idea for "objectifying Ahab's flawed character" came from the "evocative force" of Poe's The Fall of the House of Usher. In both Ahab and the house of Usher, the appearance of fundamental soundness is visibly flawed by Ahab's livid scar, and by the fissure in the masonry of Usher.

spread across every country in Africa. There are more than 300 satellite images, 300 ground photographs and 150 maps, along with informative graphs and charts that give a vivid visual portrayal of Africa and its changing environment that provide scientific evidence of the impact that natural and human activities have had on the continent's environment over the past several decades. The observations and measurements of environmental change help gauge the extent of progress made by African countries towards reaching the United Nation's Millennium Development Goals. More importantly, this book contributes to the knowledge and understanding that are essential for adaptation and remediation, and should be of immense value to all those who want to know more about Africa and who care about the future of this continent.

Cultural Spaces and Design Regine Halter 2019-10 Throughout the discussions about globalisation and design, what has been missing until now are deliberations regarding necessary changes towards a design education which puts conceptual acting in the context of global movements and problem situations. This publication pleads for a revision of design education. It addresses students, teachers, and design practitioners. On the basis of concrete examples, concepts, methods and tools are presented for discussion. They can open up new directions and possibilities of design education. Consequently, this book focuses on design students experiences and reflections as contributions to a design education understood as a school for differentiated perception. The local level the respective Cultural Space is appreciated as the actual hot spot of globalisation. The book offers reports, case studies, analyses, and reflections by lecturers, artists, and students about their working experiences in Uzbekistan, the United Arab Emirates, Australia, New Zealand, Poland, Nigeria, Botswana, South Sudan, India, Canada, Albania, the USA and others.

Latitudes 1 Yves Loiseau 2008

Music and the moderni, 1300-1350 Karen Desmond 2020-04-16 Music theorists labelled the musical art of the 1330s and 1340s as 'new' and 'modern'. A close reading of writings on music theory and the polyphonic repertory from the first half of the fourteenth century reveals a modern musical art that arose due to specific innovations in music notation. The French ars nova employed as its theoretical fundament a new system for arranging musical time proposed by the astronomer and mathematician Jean des Murs. Challenging prevailing accounts of the ars nova, this book presents the 'new art' within the intellectual context of its time, revises the datings of Jean des Murs's writings on music theory, and presents the intersection of theory and practice for a crucial era in the history of music. Through contemporaneous accounts, Desmond explores how individuals were involved in 'changing' music in early fourteenth-century France, and the technical developments they pursued that precipitated this stylistic change.

These Rebel Waves Sara Raasch 2018-08-07 A thrilling new fantasy series—full of deadly magic, double crosses, and a dangerous quest in a new world—from Sara Raasch, the New York Times bestselling author of the Snow Like Ashes series. Adeluna is a soldier. Five years ago, she helped the magic-rich island of Grace Loray overthrow its oppressor, Argrid, a country ruled by religion. But adjusting to postwar life has not been easy. When an Argridian delegate vanishes during peace talks with Grace Loray's new Council, Argrid demands brutal justice—but Lu suspects something dangerous is at work. Devereux is a pirate. As one of the stream raiders who run rampant on Grace Loray, he scavenges the island's magic plants and sells them on the black market. But after Argrid accuses raiders of the diplomat's abduction, Vex becomes a target. An expert navigator, he agrees to help Lu find the Argridian—but the truth they uncover could be deadlier than any war. Benat is a heretic. The crown prince of Argrid, he harbors a secret obsession with Grace Loray's forbidden magic. When Ben's father, the king, gives him the shocking task of reversing Argrid's fear of magic, Ben has to decide if one prince can change a devout country—or if he's building his own pyre. As conspiracies arise, Lu, Vex, and Ben will have to decide who they really are . . . and what they are willing to become for peace.

Natural History Drawings William Farquhar 2010 This book brings together for the first time all 477 pieces in Colonel William Farquhar's collection of natural history drawings, commissioned during his time as British Resident and Commandant of Malacca from 1803 to 1818. Covering a wide spectrum of flora and fauna, the evocative paintings were rendered in brilliant watercolour by Chinese artists who employed both Chinese and Western painting techniques. In an era when photography was non-existent, the only means of recording nature and wildlife was through painting. Accompanied by authoritative essays and detailed captions, *Natural History Drawings: The Complete William Farquhar Collection* is a valuable addition to the art or nature lover's library, and indispensable to those with an interest in the region. It showcases some fascinating wildlife still present in the region today and is also an important record of species that have been lost or are diminished in number.
