*Strengthening Collegiate Education in Community Colleges* Judith S. Eaton 1994-03-25 Eaton details the key factors that have caused community colleges to shift from crucial sites of higher education opportunity to ambiguous centers of quasi-educational programs and services. Examining curriculum, access, the associate degree, and general education, the author suggests what actions can be taken to strengthen the collegiate purpose across all institutional levels - providing specific suggestions on reshaping the institutional agenda for faculty, administration, presidents, and trustees. And as an alternative to changes in policies and practices, Eaton also considers structural changes for the community college - such as changing their relationship with four-year schools, changing their educational role, or becoming four-year institutions - as ways of emphasizing and strengthening their collegiate function.

Principles and Practice in Second Language Acquisition Stephen D. Krashen 1982 The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.

**The Future of Nursing** Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

**Working in the Middle** W. Norton Grubb 1996-07-26 ?Anyone interested in a better trained workforce should read this book. Well-paying jobs requiring less than a college degree are a growing sector of the economy that is often ignored. Grubb's book shows how community colleges can improve the chances of Americans securing those jobs.?--Jack Jennings, director, Center on National Education Policy?Community colleges have become America's premier training institution's and Norton Grubb has written the definitive book on how they fit into the labor market and affect economic outcomes. Working In The Middle will the standard source for years to come.?--Paul Osterman, professor of human resources and management, Sloan School, MITSixty percent of America's workers have at least a high school diploma but lack a baccalaureate degree. explains why this seldom studied workforce is critical to the nation's economic well-being, and offers recommendations for business leaders, educators, trainers, and labor economists to maintain the vitality of this enormous group of workers, the backbone of the economy. *Working in the Middle* is the first book to offer a comprehensive view of the education and training of this growing mid-skilled labor force. **Curriculum Reform in the European Schools** Sandra Leaton Gray 2018-05-29 This book is open access under a CC BY 4.0 license. This open access book examines the modern role of the European School system within the European Union, at a time when the global economy demands a new vision for contemporary education. The European schools are currently in a state of crisis: their 60-year-old tradition of bilingual and multilingual education is being strained by rapid EU expansion and the removal of English speaking teachers as a result of Brexit. Their tried and tested model of mathematics and science education has rapidly been overtaken by new developments in pedagogy and assessment research, while recruitment and retention of students and teachers has become increasingly fraught as European member states review what they are, and what they are not, prepared to fund. The authors draw on original and empirical research to assess the European Schools' place in a new Europe where the entire post-war European Project is potentially at risk. This well-researched volume will be of interest to practitioners working in European schools as well as students and scholars of EU politics and international education.

**Power to the Transfer** Dimpal Jain 2020-02-01 Currently, U.S. community colleges serve nearly half of all students of color in higher education who, for a multitude of reasons, do not continue their education by transferring to a university. For those students who do transfer, often the responsibility for the application process, retention, graduation, and overall success is placed on them rather than their respective institutions. This book aims to provide direction toward the development and maintenance of a transfer receptive culture, which is defined as an institutional commitment by a university to support transfer students of color. A transfer receptive culture explicitly acknowledges the roles of race and racism in the vertical transfer process from a community college to a university and unapologetically centers transfer as a form of equity in the higher education pipeline. The framework is guided by critical race theory in education, which acknowledges the role of white supremacy and its contemporary and historical role in shaping institutions of higher learning.

*Promoting the Educational Success of Children and Youth Learning English* National Academies of Sciences, Engineering, and Medicine 2017-08-25 Educating dual language learners (DLLs) and English learners (ELs)

effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs—who account for more than 9 percent of enrollment in grades K-12 in U.S. schools—are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.
