Masters Theses in the Pure and Applied Sciences Wade H. Shafer 2012-12-06 Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) * at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and

dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volume were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 23 (thesis year 1978) a total of 10,148 theses titles from 27 Canadian and 220 United States universities. We are sure that this broader base for theses titles reported will greatly enhance the value of this important annual reference work. While Volume 23 reports these submitted in 1978, on occasion, certain universities do report theses submitted in previous years but not reported at the time.

William Kentridge Judith B. Hecker 2010 This visually compelling publication highlights The Museum of Modern Art's unparalleled collection of prints and books by William Kentridge - nearly fifty works spanning the past three decades. The book also features a succession of artistic interventions made by Kentridge especially for the occasion. Kentridge's practice brings together drawing, film animation, books, sculpture and performance. Too little known is the extent to which the artist applies his astonishing draftsmanship to the techniques of printmaking, including etching, screenprinting, lithography and linoleum cut. In fact printmaking has always been essential to his work, from his first forays into visual art in the 1970s to his recent large-scale operas. Kentridge's love of the printed image extends to an embrace of books. He often draws and prints on unbound pages from encyclopaedias, ledgers and the like, the readymade support adding nuance and complexity to his work. He has extended these practices in *William Kentridge: Trace*, using translucent pages interspersed throughout the book to respond to his prints reproduced between them in a visual dialogue between the past and the present. The book also includes an essay, an

annotated checklist, a chronology and the text of a lecture by Kentridge on printmaking, illuminating its relevance to his broader practice. The publication coincides with the Museum's presentation of the touring exhibition William Kentridge: Five Themes. MoMA's presentation will be unique in its addition to the numerous collection works, including most of the prints reproduced in this volume.

Ants of Florida Mark Deyrup 2016-10-14 Ants are familiar to every naturalist, ecologist, entomologist, and pest control operator. The identification of the 233 species of Florida ants is technically difficult, and information on Florida ants is dispersed among hundreds of technical journal articles. This book uses detailed and beautiful scientific drawings for convenient identification. To most Florida biologists ants are currently the most inaccessible group of conspicuous and intrusive insects. This book solves the twin problems of ant identification and the extraordinary fragmentation of natural history information about Florida ants.
