Handbook of Academic Learning Gary D. Phye 1997-01-08 The Handbook of Academic Learning provides a comprehensive resource for educational and cognitive psychologists, as well as educators themselves, on the mechanisms and processes of academic learning. Beginning with general themes that cross subject and age level, the book discusses what motivates students to learn and how knowledge can be made personal for better learning and remembering. Individual chapters identify proven effective teaching methods for the specific domains of math, reading, writing, science, and critical problem solving, how students learn within those domains, and how learning can be accurately assessed for given domains and age levels. The Handbook takes a constructivist perspective to academic learning, emphasizing the construction of personal knowledge of an academic nature. Constructivism within the context of learning theory is viewed as involving an active learner that constructs an academic knowledge base through the development of cognitive strategies and metacognition. The book discusses the development of basic literacy skills that provide the foundation for higher order thinking and problem solving. Constructivism recognizes the social dimension of classroom learning and emphasizes the motivational elements of self-regulation and volition as essential learner characteristics. Written by authors who have first-hand experience with both theory development and the

development of authentic classroom instructional techniques, the Handbook empowers educators to develop, implement, and field-test authentic instructional practices at their school site. The book provides a review of the literature, theory, research, and skill techniques for effective teaching and learning. Key Features * Identifies effective teaching with specific techniques * Covers elementary school through high school * Discusses teaching methods for all main subject areas: reading, writing, math, science, and critical thinking * Identifies how students learn to learn * Reviews theory, research, techniques, and assessment * Contains field tested examples for the educational professional at the school site * Provides a resource for staff development

Dyslexia and Hyperlexia P. G. Aaron 2012-12-06 Even though I had been studying reading problems in children for a number of years as a means of understanding cognitive processes, I became deeply committed to the study of developmental dyslexia after my encounter with S. H. , a dyslexic college student. Until then, dyslexia to me remained an interesting phenomenon but somewhat removed from the mainstream of my research interests. The facts that, in spite of his superior IQ, S. H. could read no better than a child in the fifth grade and misspelled even common words such as was and here, however, took me by surprise and made me appreciate the intriguing and challenging nature of developmental dyslexia. This led to a series of studies of college students with reading disability, a group that is relatively unexplored. The general plan of these investigations was to study a small number of disabled readers at any given time, rather intensively. Even though this approach limits the generalizability of the research findings, it lays bare some of the most interesting facts about dyslexia which are obscured in large-scale statistical studies. These studies have now extended well over a decade and are still continuing. As soon as these studies were started, it became obvious that not all reading-disabled college students are alike and that disabled readers could be classified into three broad categories: those with poor decoding skill, those with poor comprehension ability, and those with a combination of these two deficits.

Reading and Writing Disorders in Different Orthographic Systems P. G. Aaron
2012-12-06 Even though Specific Reading Disability (Dyslexia) has been

clinically recognized as a developmental learning disorder for nearly a hundred years. only within the past two decades it has become the subject of major experimental investigation. Because, by definition, dyslexic children are of average or superior intelligence, it is often suspected that some arcane feature of the written language is responsible for the inordinate difficulty experienced by these children in learning to read. The occasional claim that developmental dyslexia is virtually nonexistent in some languages coupled with the fact that languages differ in their writing systems has further rendered orthography a subject of serious investigation. The present Volume represents a collection of preliminary reports of investigations that explored the relationship between orthography and reading disabilities in different languages. Even though not explicitly stated, these reports are concerned with the question whether or not some orthographies are easier to learn to read and write than others. One dimension on which orthographies differ from each other is the kind of relationship they bear to pronunciation. The orthographies examined in this book range from the ones that have a simple one-to-one grapheme-phoneme relationship to those which have a more complex relationship.

The Connections Between Language and Reading Disabilities Hugh W. Catts
2005-01-15 This is an edited book based on papers presented at a 2003 invitee-only conference under the sponsorship of the Merrill Advanced Studies Center of the University of Kansas. The participants were prominent scholars in the areas of language and reading, and have research programs funded by NIH and other sources. The purpose of the gathering was to discuss theoretical issues and research findings concerning the relationship between developmental language and reading disabilities, specifically looking at neurological, behavioral, and genetic factors. In addition, it discussed other factors contributing to reading difficulties in the middle elementary school years through adolescence and literacy outcomes for children with early language impairments, and how these problems relate to children with dyslexia. The Foreword is written by Reid Lyon, Branch Chief, Child Development and Behavior Branch, NICHD-National Institutes of Health. This book appeals to scholars in the areas of language disorders and reading disabilities, as well as to practicing speech-language pathologists, special educators, and reading specialists. It may also be used in graduate courses designed as seminars in either language disorders or reading disabilities in schools of communication disorders, as well as schools of education--especially special education departments.

Working With Students With Disabilities Vicki A. McGinley 2015-09-14 Working with Students with Disabilities: Preparing School Counselors by Vicki A. McGinley and Barbara C. Trolley is an essential tool for all school counselors in training and in practice with the aim to provide a comprehensive approach to working with students with disabilities in a school setting. As more students with disabilities are being included, school counselors need to have a fundamental understanding of the terminology, laws, principles, collaboration, assessment measures, and psycho-social, diversity issues associated with special education. This book continues in the trend of providing sound, evidenced-based knowledge with practical case examples and guided exercises, making the material 'come alive' and fostering critical thinking. "Finally, a book FOR school counselors that specifically addresses the needs of students with disabilities and how we can interface with the team in supporting these students." -Nona Cabral, California Baptist University "McGinley and Trolley have brought together in one exceptional volume the vast material that modern school counselors often leave the classroom searching for - how to understand the complexities of the system in regards to students with special needs, how to best collaborate with professionals and families in meeting those needs, and how to best structure interventions and programs to move those students forward across social, emotional, and academic realms." -Carrie Lynn Bailey, Georgia Southern University "McGinley and Trolley have crafted a text that illuminates the multifaceted responsibilities of school counselors relevant to special education. Faculty, graduate students and practicing counselors alike will find the problem-based learning approach a helpful guide for integrating the content covered in this text into their professional practice." -Kylie P. Long-term effects of Learning English Shigeo Uematsu 2015-05-05 This book presents a pioneering longitudinal study on English language instruction at the elementary school (ELES) level in the Japanese public school system. It attempts to identify those domains most sensitive to early English instruction by employing a state-of-the-art quantitative research methodology. English education was formally introduced in Japan for fifth and sixth graders in 2011 and is still in its infancy as a program. This study compares two groups (Grade 7 and 8) of students, one with ELES and one without, in order to shed light on their experiences. Comparisons are carried out not only quantitatively, measuring changes in English skills (listening, speaking, reading, and vocabulary / grammar) and the ELES students' affective aspects, but also qualitatively through in-depth interviews. Thus, this study attempts to capture the ELES students' experiences from a multi-dimensional perspective. The comprehensive literature review provided offers a valuable resource not only

for researchers looking for a quick digest of the literature in this field before undertaking their own research, but also for policy-makers seeking to assess how to best implement ELES.

Teaching EFL Learners Shadowing for Listening Yo Hamada 2016-07-01 Shadowing, an active and highly cognitive technique for EFL listening skill development, in which learners track heard speech and vocalize it simultaneously, is gradually becoming recognized. However, there remain a lot of mysteries and misunderstandings about it. This book uncovers shadowing in terms of theory and practice. This book cements shadowing as a separate technique from other similar techniques such as Elicited Imitation, Mirroring, and simple repetition, and provides ample empirical data to explain the function of Shadowing. It also elaborates on how Shadowing should be used in terms of materials, procedure, and learners' psychology, which would aid in instructors' use of Shadowing in teaching. A guide on a method effective in improving learners' bottom-up listening skills, this book will certainly prove useful to English Language learners and instructors in their linguistic pursuits.

Calibrating Standards-based Assessment Tasks for English as a First Foreign Language. Standard-setting Procedures in Germany Claudia Harsch 2010 This report is the second in a multi-part technical report series describing the development, calibration and validation of standards-based tests for English as a first foreign language at the Institute for Educational Progress (Institut zur Qualitätsentwicklung im Bildungswesen, IQB) in Berlin, Germany. It details the empirical basis of the calibration of the test item pool and criterion-referenced standard-setting procedures. The aim is to make transparent the

decisions, methods and procedures which led to the setting of cut-scores in alignment with the National Educational Standards (NES) (i.e., the Länderübergreifende Bildungsstandards) and the Common European Framework of Reference for Languages (CEF) for English as a first foreign language. Standards were set for the lower secondary school level of Hauptschulabschluss and Mittlerer Bildungsabschluss. This second report describes the process of relating the standards-based proficiency tests to the CEF levels, delineating the purpose of the tests, the aims of the standard-setting procedures, the rationale of the chosen procedures, and the use of the Manual for Linking Language Examinations to the CEF. This is followed by a detailed description of the two standard-setting methods employed, the Bookmark method and the computer-assisted Criterion Mapping method—developed and implemented by the Berkeley Evaluation and Assessment Research (BEAR) Center, University of California. This volume provides information on how the standard-setting sessions were conducted in collaboration with BEAR Center, and describes procedures, data gathering, and issues and problems which arose during the course of the study. The report concludes with a synthesis of the standard-setting study's results, and discusses the implications of how these results are reported and presented to stakeholders and policy makers.
