**Ramonst** A.F Knott 2016-11-18 Hidden in the mountains of East Tennessee, an eleven-year old goes about the business of being a boy during the summer of 1970. Within a balance of terror and innocence, he bears silent witness to ghosts of the dead and the cruelties of a teenage killer while local justice plays out in a community carved from legacies of coal mining and religion.

**Tax Havens** Ronen Palan 2013-02-01 From the Cayman Islands and the Isle of Man to the Principality of Liechtenstein and the state of Delaware, tax havens offer lower tax rates, less stringent regulations and enforcement, and promises of strict secrecy to individuals and corporations alike. In recent years government regulators, hoping to remedy economic crisis by diverting capital from hidden channels back into taxable view, have undertaken sustained and serious efforts to force tax havens into compliance. In Tax Havens, Ronen Palan, Richard Murphy, and Christian Chavagneux provide an up-to-date evaluation of the role and function of tax havens in the global financial system-their history, inner workings, impact, extent, and enforcement. They make clear that while, individually, tax havens may appear insignificant, together they have a major impact on the global economy. Holding up to \$13 trillion of personal wealth-the equivalent of the annual U.S. Gross National Product-and serving as the legal home of two million corporate entities and half of all international lending banks, tax havens also skew the distribution of globalization's costs and benefits to the detriment of developing economies. The first comprehensive account of these entities, this book challenges much of the conventional wisdom about tax havens. The authors reveal that, rather than

operating at the margins of the world economy, tax havens are integral to it. More than simple conduits for tax avoidance and evasion, tax havens actually belong to the broad world of finance, to the business of managing the monetary resources of individuals, organizations, and countries. They have become among the most powerful instruments of globalization, one of the principal causes of global financial instability, and one of the large political issues of our times.

**The Zodiake of Life** Marcello Palingenio Stellato 1976 This important Renaissance poem was prescribed as a textbook in many schools. Bruno praised it. The mathematician Thomas Digges learned Book XI by heart. Gabriel Harvey approved the translation. Shakespeare probably studied it. In the tradition of medieval philosophical poetry, the Zodiake has a "vision" framework, allegorized myths & mythological figures, vividly describes the seven deadly sins, lavishly employs poetic devices & rhetorical ornament, phrases Polonius-like sententious maxims, etches characters with vigorous detail, & employs many images.

**The Punitive Society** Michel Foucault 2018-08-07 These thirteen lectures on the 'punitive society,' delivered at the Collège de France in the first three months of 1973, examine the way in which the relations between justice and truth that govern modern penal law were forged, and question what links them to the emergence of a new punitive regime that still dominates contemporary society. Praise for Foucault's Lectures at the Collège de France Series "Ideas spark off nearly every page...The words may have been spoken in [the 1970s], but they seem as alive and relevant as if they had been written yesterday."—Bookforum "Foucault is quite central to our sense of where we are...[He] is carrying out, in the noblest way, the promiscuous aim of true culture."—The Nation "[Foucault] has an alert and sensitive mind that can ignore the familiar surfaces of established intellectual coded and ask new questions...[He] gives dramatic quality to the movement of culture."—The New York Review of Books

From Galaxies to Turbines W.G.S Scaife 1999-01-01 From Galaxies to Turbines: Science, Technology and the Parsons Family looks at the way science and industry relate to each other, and at the way social attitudes affect this relationship. An expert on the Parsons Family, the author beautifully illustrates this by tracing the story of the remarkable endeavors of the Parsons family during the 125 years that embraced their lives in Ireland and Great Britain during the developing Industrial Revolution. The father of the family, William Parsons, Earl of Rosse, discovered the Spiral Nebulae at his observatory in Ireland and displayed an unusual familiarity with engineering principles in the building of his two giant telescopes. His son, Charles, was at the forefront of the new age of technology among shipbuilders and engineers in the northeast coast of England. Lavishly illustrated throughout, with a handy family tree and map of the River Tyne pin-pointing key historic events, this is a highly accessible and fascinating account for the general reader interested in the way scientific knowledge and industrial application have slowly emerged in recent history.

**Satellite Altimetry and Earth Sciences** Lee-Lueng Fu 2000-11-09 The new level of precision and global coverage provided by satellite altimetry is rapidly advancing studies of ocean circulation. It allows for new insights into marine geodesy, ice sheet movements, plate tectonics, and for the first time provides high-resolution bathymetry for previously unmapped regions of our watery planet and crucial information on the large-scale ocean features on intra-season to interannual time scales. Satellite Altimetry and Earth Sciences has integrated the expertise of the leading international researchers to demonstrate the techniques, missions, and accuracy of satellite altimetry, including altimeter measurements, orbit determination, and ocean circulation models. Satellite altimetry is helping to advance studies of ocean circulation, tides, sea level, surface waves and allowing new insights into marine geodesy. Satellite Altimetry and Earth Sciences provides high resolution bathymetry for previously unmapped regions of our watery planet. Satellite Altimetry and Earth Sciences is for a very broad spectrum of academics, graduate students, and researchers in geophysics, oceanography, and the space and earth sciences. International agencies that fund satellite-based research will also appreciate the handy reference on the applications of satellite altimetry.

**Lost in a Good Book** Jasper Fforde 2009-05-01 he second book in Number One bestselling author Jasper Fforde's phenomenally successful Thursday Next series. 'Fans of the late Douglas Adams, or, even, Monty Python, will feel at home with Fforde' - Herald Thursday Next, literary detective and newlywed is back to embark on an adventure that begins, quite literally on her own doorstep. It seems that Landen, her husband of four weeks, actually drowned in an accident when he was two years old. Someone, somewhere, sometime, is responsible. The sinister Goliath Corporation wants its operative Jack Schitt out of the poem in which Thursday trapped him, and it will do almost anything to achieve this - but bribing the ChronoGuard? Is that possible? Having barely caught her breath after The Eyre Affair, Thursday must battle corrupt politicians, try to save the world from extinction, and help the Neanderthals to species self-determination. Mastadon migrations, journeys into Just William, a chance meeting with the Flopsy Bunnies, and violent life-and-death struggles in the summer sales are all part of a greater plan. But whose? and why?

Geohazards and Risks Studied from Earth Observations Teodolina Lopez 2021-11-23 The Sentinel missions of the COPERNICUS Programme of the European Union, as well as other Earth Observation missions, provide new opportunities for systematic monitoring of natural and man-made hazards and disasters that can

highly impact human societies. The contributions collected in this book address a broad range of geohazards observable from space, including earthquakes, volcanic hazards, extreme events (e.g. storm surges, floods and droughts), fires, pollution, tipping points in physical and biological systems, etc.. They provide information on how space observations can improve our understanding of the driving mechanisms at the origin of such geohazards, and of their mutual interactions. Focus is given on the expected added-value information obtained by combining different types of space-based and in situ observations as well as model results. The chapters "Space-Based Earth Observations for Disaster Risk Management", "Earth Observation for the Assessment of Earthquake Hazard, Risk and Disaster Management", "Earth Observation for Crustal Tectonics and Earthquake Hazards", "Earth Observations for Monitoring Marine Coastal Hazards and Their Drivers", "Air Pollution and Sea Pollution Seen from Space" are available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](http://link.springer.com). Previously published in *Surveys in Geophysics*, Volume 41, Issue 6, 2020

**Jewish Manuscript Cultures** Irina Wandrey 2017-12-18 Hebrew manuscripts are considered to be invaluable documents and artefacts of Jewish culture and history. Research on Hebrew manuscript culture is progressing rapidly and therefore its topics, methods and questions need to be enunciated and reflected upon. The case studies assembled in this volume explore various fields of research on Hebrew manuscripts. They show paradigmatically the current developments concerning codicology and palaeography, book forms like the scroll and codex, scribes and their writing material, patrons, collectors and censors, manuscript and book collections, illuminations and fragments, and, last but not least, new methods of material analysis applied to manuscripts. The principal focus of this volume is the material and intellectual history of Hebrew book cultures from antiquity to the Middle Ages and Early Modern Period, its intention being to heighten and sharpen the reader's understanding of Jewish social and cultural history in general.

*Satellite Altimetry Over Oceans and Land Surfaces* Detlef Stammer 2017-10-31 Satellite remote sensing, in particular by radar altimetry, is a crucial technique for observations of the ocean surface and of many aspects of land surfaces, and of paramount importance for climate and environmental studies. This book provides a state-of-the-art overview of the satellite altimetry techniques and related missions, and reviews the most-up-to date applications to ocean dynamics and sea level. It also discusses related space-based observations of the ocean surface and of the marine geoid, as well as applications of satellite altimetry to the cryosphere and land surface waters; operational oceanography and its applications to navigation, fishing and defense.

*Hebrew Manuscripts* Ilana Tahan 2007 "Highlighting the vibrant interplay between work and image, Tahan traces the development of Sephardi and Ashkenazi scripts, as well as the increased use of images, such as micrographic motifs, created out of minute script. By close analysis of individual folios, Tahan shows how scribes emphasized sacred words and phrases, enhancing and adorning the script. Illustrates with over 145 colour examples - some shown here for the first time - Hebrew Manuscripts will appeal to all art lovers."--BOOK JACKET.

*European Genizah* Andreas Lehnardt 2020-06-22 This volume includes contributions presented at two conferences, in Mainz (Germany) and Jerusalem (Israel). The articles present a number of new discoveries of binding fragments in several

European libraries and beyond.

**Making Finance Work for Africa** Patrick Honohan 2007 Drawing on its extensive experience in helping restructure and reform financial systems, the World Bank examines the state of African domestic financial systems in a global comparison. It identifies promising trends as well as pinpointing the major shortcomings that are observed across sub-Saharan Africa. Policy recommendations distinguish between those designed to make finance a more effective driver of economic growth and those designed to give low income, small-scale and other excluded groups better access to financial services.

Radio Frequency and Microwave Electronics Illustrated Matthew M. Radmanesh 2001 Foreword by Dr. Asad Madni, C. Eng., Fellow IEEE, Fellow IEE Learn the fundamentals of RF and microwave electronics visually, using many thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications—in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design considerations for microwave amplifiers: stability, gain, and noise Workable considerations in the design of practical active circuits: amplifiers, oscillators, frequency converters, control circuits RF and Microwave Integrated Circuits (MICs) Novel use of "live math" in circuit analysis and design Dr. Radmanesh has drawn upon his many years of practical experience in the microwave industry and educational arena to introduce an exceptionally wide range of practical concepts and design methodology and techniques in the most comprehensible fashion. Applications include small-signal, narrow-band, low noise, broadband and multistage transistor amplifiers; large signal/high power amplifiers; microwave transistor oscillators, negative-resistance circuits, microwave mixers, rectifiers and detectors, switches, phase shifters and attenuators. The book is intended to provide a workable knowledge and intuitive understanding of RF and microwave electronic circuit design. Radio Frequency and Microwave Electronics Illustrated includes a comprehensive glossary, plus appendices covering key symbols, physical constants, mathematical identities/formulas, classical laws of electricity and magnetism, Computer-Aided-Design (CAD) examples and more. About the Web Site The accompanying web site has an "E-Book" containing actual design examples and methodology from the text, in Microsoft Excel environment, where files can easily be manipulated with fresh data for a new design.

*Aristarchus of Samos, the Ancient Copernicus ; a History of Greek Astronomy to Aristarchus, Together with Aristarchus's Treatise on the Sizes and Distances of the Sun and Moon* Sir Thomas Heath 2020-07-03

*The Annihilation of Nature* Gerardo Ceballos 2015-09-30 "This book shows us the face of Earth's sixth great mass extinction, revealing that this century is a time of darkness for the world's birds and mammals. In *The Annihilation of Nature*, three of today's most distinguished conservationists tell the stories of the birds and mammals we have lost and those that are now on the road to extinction. These tragic tales, coupled with eighty-three color photographs from the world's leading nature photographers, display the beauty and biodiversity that humans are squandering."--Book jacket.

**Literary Translation, Reception, and Transfer** Norbert Bachleitner 2020-09-21 The three concepts mentioned in the title of this volume imply the contact between two or more literary phenomena; they are based on similarities that are related to a form of 'travelling' and imitation or adaptation of entire texts, genres, forms or contents. Transfer comprises all sorts of 'travelling', with translation as a major instrument of transferring literature across linguistic and cultural barriers. Transfer aims at the process of communication, starting with the source product and its cultural context and then highlighting the mediation by certain agents and institutions to end up with inclusion in the target culture. Reception lays its focus on the receiving culture, especially on criticism, reading, and interpretation. Translation, therefore, forms a major factor in reception with the general aim of reception studies being to reveal the wide spectrum of interpretations each text offers. Moreover, translations are the prime instrument in the distribution of literature across linguistic and cultural borders; thus, they pave the way for gaining prestige in the world of literature. The thirty-eight papers included in this volume and dedicated to research in this area were previously read at the ICLA conference 2016 in Vienna. They are ample proof that the field remains at the center of interest in Comparative Literature.

Talismano (Tunisian Literature Series) Abdelwahab Meddeb 2011-05-03 A lush journey into a Tunisia of memory and imagination. Talismano is a novelistic exploration of writing seen as a hallucinatory journey through half-remembered, half-imagined cities—in particular, the city of Tunis, both as it is now, and as it once was. Walking and writing, journey and journal, mirror one another to produce a calligraphic, magical work: a palimpsest of various languages and cultures, highlighting Abdelwahab Meddeb's beguiling mastery of both the Western and Islamic traditions. Meddeb's journey is first and foremost a sensual one, almost decadent, where the narrator luxuriates in the Tunis of his memories and intercuts these impressions with recollections of other cities at other times, reviving the mythical figures of Arab-Islamic legend that have faded from memory in a rapidly westernizing North Africa. A fever dream situated on the knife-edge between competing cultures, Talismano is a testament to the power of language to evoke, and subdue, experience.

**Symbols in Arts, Religion and Culture** Farrin Chwalkowski 2016-12-14 We are a product of nature. Every single cell of our body is made of, and depends, on nature. Our inner soul is heavily influenced by nature. We feel sad if the sun is not shining for a few days, and feel pleasure when drawn to the wonder of flowers and uplifted by the song of birds. We came from nature; we are part of nature. In short, we are nature. Nature has been an intimate part of the human experience from the earliest times. Different religions and cultures, from all corners of the world, have honoured and worshipped nature in art, ritual and literature in their own unique ways. This book shows how we learn about our own human nature, our own sense of identity and how we fit into the larger scheme of life and spirit when we come to better understand how our human ancestors, through art, symbol and myth, expressed their relationship with the natural world.

**Broken Music** Ursula Block 2018-11 Broken Music is an essential compendium for records created by visual artists. The publication was edited by Ursula Block and Michael Glasmeier and originally published in 1989 by DAAD. Broken Music focuses on recordings, record-objects, artwork for records, and record installations made by thousands of artists between WWII and 1989. It also includes essays by both editors as well as Theodor W. Adorno, René Block, Jean Dubuffet, Milan Knizak, László Moholy-Nagy, Christiane Seiffert, and Hans Rudolf Zeller, as well as a flexi disc of the Arditti Quartet performing Knizak's "Broken Music." The centerpiece of the publication is a nearly 200-page bibliography of artists' records. Works chosen for the publication revolved around four criteria: (1) record covers created as original work by visual artists; (2) record or sound-producing objects (multiples/editions/sculptures); (3) books and publications that contain a record or recorded-media object; and (4) records or recorded media that have sound by visual artists.
