Evidence-Based Critical Care Robert C. Hyzy 2020-03-24 This extensively updated textbook comprehensively reviews the latest developments in evidence-based critical care. Topics are covered in a case study format with an emphasis on the principles of diagnosis and therapy. Each topic is covered using a variety of case studies and features a case vignette, clinical question and an additional discussion section to clarify areas of particular importance. Topics including cytokine release syndrome, sympathomimetic overdose and palliative care in the intensive care unit have been extensively revised, while new sections focusing on neuromuscular disease and subarachnoid hemorrhages have been added. Evidence-Based Critical Care, 2nd edition is a critical resource for critical care practitioners, fellows, residents; allied health professionals and medical students who wish to expand their knowledge within critical care. The case study-based approach taken in the textbook makes this an ideal resource for those preparing for board examinations.

Advances in Polychaete Research Elin Sigvaldadottir 2013-06-29 In July 2001 experts from all around the world met in Reykjavik, Iceland to discuss various issues of polychaete biology. In particular the latest developments in cladistic inference of polychaete phylogeny were presented. Some studies applied recent molecular techniques, revealing unknown genetic relationships between the different families of polychaetous annelids. This volume is of interest to specialists and students seeking an introduction to the latest developments in the field of systematics and ecology of polychaetous annelids. This book is one in a series presenting results from the International Polychaete conferences.

Social Work Practice Eileen Gambrill 2012-10-31 The first textbook to emphasize the importance of critical thinking skills to practice, this third edition of the classic Social Work Practice retains its unique focus on thinking critically about decisions that social workers make daily. Organized around the phases of helping, this hands-on introduction highlights the decision points that social workers encounter during assessment, intervention, and evaluation. This text, together with its companion website, provides students with a wealth of hands-on exercises for developing and assessing their practice skills. Most importantly, it helps students enhance client well-being by becoming critical thinkers and

evidence-informed practitioners.

From Slave Cabin to Pulpit Peter Randolph 2004 Although much has been written about the peculiar institution of slavery, questions still remain about this manifestly cruel system. How could such brutality be tolerated by a modern, civilized society? Perhaps even more importantly, how could the victims cope with the numerous physical and spiritual challenges? Out of print for over 100 years, FROM SLAVE CABIN TO PULPIT shows the power of faith, of how one man, Peter Randolph, born into miserable poverty and ignorance, after an almost miraculous release from slavery, attained a position of respect and authority in white society. Reminiscent of Frederick Douglass' own narrative, this work provides a carefully written, detailed, and fair portrayal of life in slavery, and the life after it for those fortunate enough to have survived. Randolph traces his growth from illiterate laborer to church minister, all the while unselfishly pointing out that his progress was made largely possible by the care and understanding of people uncontaminated by the sins of the age. He also praises the men and women who helped destroy slavery, but notes that racism still had to be eliminated. Despite his savage mistreatment, he does not seek revenge, nor does he see former slave-holders as beyond redemption.

Digital Teleretinal Screening Kanagasingam Yogesan 2012-03-28 Digital retinal imaging performed by primary care providers and nurses, followed by remote image interpretation (teleretinal imaging), is rapidly acquiring a crucial role in many parts of the world as it permits the detection of major diseases, such as diabetic retinopathy and glaucoma, in patients who would otherwise be beyond the reach of a trained ophthalmologist. In this book, experts from around the world describe how digital teleretinal screening can be set up and optimally utilized. Technical issues are discussed, and the appropriate use of screening for different diseases and in different age groups is explained. The major part of the book draws upon the clinical experience of leading practitioners in a wide range of teleretinal applications. The result is a comprehensive source of high-quality information for clinicians and other health professionals who are involved in eye care delivery, so that they can assess how teleretinal screening might be applied to their working practice.

Selling Teaching Hospitals and Practice Plans John A. Kastor 2008-07-15 Why would a university renowned for its school of medicine ever sell its teaching hospital? In his newest book, Dr. John A. Kastor presents an insider's view of why university medical centers decide to sell teaching hospitals, why the decision might be a good one, and how such transitions are received by the faculty and administration. Kastor tells the story of two universities that, under financial duress for more than a decade, chose to sell their teaching hospitals. George Washington University sold to a national, for-profit corporation, Universal Health Services, Inc., and Georgetown University sold to a not-for-profit, local company, MedStar Health. Through interviews with key players involved in and affected by these decisions, Kastor examines the advantages and disadvantages of selling and describes the problems that can afflict medical schools that separate from their faculty practice plans. For the current leaders of medical schools facing similar financial challenges, Kastor analyzes how much it costs to teach clinical medicine and offers valuable advice on how to reduce expenses and increase surpluses.

Deep Space Propulsion K. F. Long 2011-11-25 The technology of the next few decades could possibly allow us to explore with robotic probes the closest stars outside our Solar System, and maybe even observe some of the recently discovered planets circling these stars. This book looks at the reasons for exploring our stellar neighbors and at the technologies we are developing to build space probes that

can traverse the enormous distances between the stars. In order to reach the nearest stars, we must first develop a propulsion technology that would take our robotic probes there in a reasonable time. Such propulsion technology has radically different requirements from conventional chemical rockets, because of the enormous distances that must be crossed. Surprisingly, many propulsion schemes for interstellar travel have been suggested and await only practical engineering solutions and the political will to make them a reality. This is a result of the tremendous advances in astrophysics that have been made in recent decades and the perseverance and imagination of tenacious theoretical physicists. This book explores these different propulsion schemes - all based on current physics - and the challenges they present to physicists, engineers, and space exploration entrepreneurs. This book will be helpful to anyone who really wants to understand the principles behind and likely future course of interstellar travel and who wants to recognize the distinctions between pure fantasy (such as Star Trek's 'warp drive') and methods that are grounded in real physics and offer practical technological solutions for exploring the stars in the decades to come.
