All That Glittered Timothy Alborn 2019-08-20 During the century after 1750, Great Britain absorbed much of the world's supply of gold into its pockets, cupboards, and coffers when it became the only major country to adopt the gold standard as the sole basis of its currency. Over the same period, the nation's emergence was marked by a powerful combination of Protestantism, commerce, and military might, alongside preservation of its older social hierarchy. In this rich and broad-ranging work, Timothy Alborn argues for a close connection between gold and Britain's national identity. Beginning with Adam

Smith's Wealth of Nations, which validated Britain's position as an economic powerhouse, and running through the mid-nineteenth century gold rushes in California and Australia, Alborn draws on contemporary descriptions of gold's value to highlight its role in financial, political, and cultural realms. He begins by narrating British interests in gold mining globally to enable the smooth operation of the gold standard. In addition to explaining the metal's function in finance, he explores its uses in war expenditure, foreign trade, religious observance, and ornamentation at home and abroad. Britons criticized foreign cultures for their wasteful and inappropriate uses of gold, even as it became a prominent symbol of status in more traditional features of British society, including its royal family, aristocracy, and military. Although Britain had been ambivalent in its embrace of gold, ultimately it enabled the nation to become the world's most modern economy and to extend its imperial reach around the globe. All That Glittered tells the story of gold as both a marker of value and a valuable commodity, while providing a new window onto Britain's ascendance after the 1750s.

Teaching Chemistry in Higher Education Michael Seery 2019-07-01 Teaching Chemistry in Higher Education celebrates the contributions of Professor Tina Overton to the scholarship and practice of teaching and learning in chemistry education. Leading educators in United Kingdom, Ireland, and Australia—three countries where Tina has had enormous impact and influence—have contributed chapters on innovative approaches that are well-established in their own practice. Each chapter introduces the key education literature underpinning the approach being described. Rationales are discussed in the context of attributes and learning outcomes desirable in modern chemistry curricula. True to Tina's personal philosophy, chapters offer pragmatic and useful guidance on the implementation of innovative teaching approaches, drawing from the authors' experience of their own practice and evaluations of their implementation. Each chapter also offers key guidance points for implementation in readers' own settings so as to maximise their adaptability. Chapters are supplemented with further reading and supplementary materials on the book's website (overtonfestschrift.wordpress.com). Chapter topics include innovative approaches in facilitating group work, problem solving, context- and problem-based learning, embedding transferable skills, and laboratory education—all themes relating to the scholarly interests of Professor Tina Overton. About the Editors: Michael Seery is Professor of Chemistry Education at the University of Edinburgh, and is Editor of Chemistry Education Research and Practice. Claire Mc Donnell is Assistant Head of School of Chemical and Pharmaceutical Sciences at Technological University Dublin. Cover Art: Christopher Armstrong, University of Hull
