Marsh Mud and Mummichogs Evelyn B. Sherr 2015-05-15 "This book," writes marine biologist Evelyn B. Sherr, "is meant to give others an understanding of the fascinating life of the region, from the smallest creatures in marsh mud and estuarine water, to the mummichogs and multitudes of other animals that find food and shelter in the vast expanses of marsh grass, in the sounds, and along the beaches of the Georgia Isles." Sherr not only spent years doing research in coastal Georgia, she began her family there. Although Sherr's career would take her around the world, this special place stuck with her. Here she shares her deep knowledge of the remarkable environment that she, her scientist husband, and their two children explored time and again. Dr. Sherr is the ideal companion with whom to discover coastal Georgia. She points out its swimming, running, flying, drifting, and wriggling wildlife--and tells how it all exists in balance in a landscape subject to its own daily ebbs and flows, its own seasonal cycles. As we learn about Georgia's distinctive intertidal salt marshes, subtidal estuaries, and open beaches and dunes, Sherr reveals the creatures that support--and are supported by--these habitats: the microbes in estuarine water and in marsh mud; the zooplankton swarming in the tidal rivers and sounds; and numerous fish, reptiles, birds, and mammals.

Society in America Harriet Martineau 2017-07-05 Harriet Martineau brought to her observations the convictions of a vehement English liberal and an astonishingly modern sociological approach. In 1834 she wrote the first draft of *How to Observe Manners and Morals*--perhaps the earliest book on the methodology of social research. In abridging the 800-page original for the modern reader, Lipset has concentrated on Martineau's brilliant discussion of religious practices, social status, and childrearing;

political apathy and the position of women, blacks, and immigrants; and the American's casual approach to indebtedness and his speculative wealth-or-ruin schemes.

**The World of The Salt Marsh** Charles Seabrook 2013-05-01 The World of the Salt Marsh is a wide-ranging exploration of the southeastern coast--its natural history, its people and their way of life, and the historic and ongoing threats to its ecological survival. Focusing on areas from Cape Hatteras, North Carolina, to Cape Canaveral, Florida, Charles Seabrook examines the ecological importance of the salt marsh, calling it "a biological factory without equal." Twice-daily tides carry in a supply of nutrients that nourish vast meadows of spartina ( *Spartina alterniflora* )--a crucial habitat for creatures ranging from tiny marine invertebrates to wading birds. The meadows provide vital nurseries for 80 percent of the

seafood species, including oysters, crabs, shrimp, and a variety of finfish, and they are invaluable for storm protection, erosion prevention, and pollution filtration. Seabrook is also concerned with the plight of the people who make their living from the coast's bounty and who carry on its unique culture. Among them are Charlie Phillips, a fishmonger whose livelihood is threatened by development in McIntosh County, Georgia, and Vera Manigault of Mount Pleasant, South Carolina, a basket maker of Gullah-Geechee descent, who says that the sweetgrass needed to make her culturally significant wares is becoming scarcer. For all of the biodiversity and cultural history of the salt marshes, many still view them as vast wastelands to be drained, diked, or "improved" for development into highways and subdivisions. If people can better understand and appreciate these ecosystems, Seabrook contends, they are more likely to join the growing chorus of scientists, conservationists, fishermen, and coastal visitors and residents calling for protection of these truly amazing places.
