Business Criminal Law Lukas Staffler 2021-12-15 This textbook deals with business criminal law from the perspective of Germany, Austria, Liechtenstein and Switzerland. It primarily addresses students in business and economics (master's programme) as well as business practitioners, but is also meant for lawyers and law students. As criminal law legislators exert considerable influence on economic life, raising and growing awareness in the area of criminal law seems compulsory for future managers and executives. This textbook approaches the legal field less normatively and rather in a practical and entrepreneurial way. Its contents are based on the master level class "Business Criminal Law" at "MCI | The Entrepreneurial School" taught by the author. This textbook has been recommended and developed for university courses in Germany, Austria and Switzerland.

This facsimile reproduction of that seminal work makes available to investors, once again, the original thinking of "this century's (and perhaps history's) most important thinker on applied portfolio investment."

International Regulation of Banking Simon Gleeson 2018-08-19 Financial capital regulation drives almost every aspect of the financial markets, from the structures of financial groups and the way they raise capital to the development of investment structures and financial engineering such as derivatives, securitisations, structured finance, credit derivatives, repos and stock lending. This new, third edition of the leading guide on the structure of bank financial regulation is invaluable for lawyers and other non-statisticians interested in the regulatory drivers which shape modern financial transactions and techniques. The legal and regulatory principles which underlie the regulations are articulated here in a structured and accessible format without formulae. Since the publication of the second edition, the final form of the Basel III international regulatory framework for banks has been agreed, and the new edition covers both Basel III and references the first tranche of rulebooks and secondary legislation to ensue as a result. The new edition also covers the new formal bank resolution and recovery regime which came into force in November 2016 requiring UK banks, building societies and the large investment firms to demonstrate minimum requirements for eligible liabilities and own funds. Another key focus of the new edition is bank structural reform. Whilst the implementation of the EU initiative stalled and was ultimately withdrawn, the UK has already implemented its own version which has had, and will continue to have, a significant impact on banking regulation.

Macroeconomics and New Macroeconomics Bernhard Felderer 1992-08-21 This book gives a comprehensive account of traditional and more recent developments in macroeconomic theory. It is written primarily for students at the intermediate level. The book differs from the customary expositions in that the authors do not discuss topic by topic but orthodoxy by orthodoxy. Thus, the main approaches, like Classical theory, Keynesian theory, theory of portfolio selection, Monetarism, Rational Expectations theory, and Neokeynesian "disequilibrium" theory are presented in historical order. Each of these approaches is substantiated and criticized in a self-contained chapter, and the authors have taken great pains to bring out the relations and differences between them. A mathematical appendix reviews those mathematical facts which are especially important for macroeconomic models and serves to make the

The Ancient Economy Joseph Gilbert Manning 2007 Historians and archaeologists normally assume that the economies of ancient Greece and Rome between about 1000 BC and AD 500 were distinct from those of Egypt and the Near East. However, very different kinds of evidence survive from each of these areas, and specialists have, as a result, developed very different methods of analysis for each region. This book marks the first time that historians and archaeologists of Egypt, the Near East, Greece, and Rome have come together with sociologists, political scientists, and economists, to ask whether the differences between accounts of these regions reflect real economic differences in the past, or are merely a function of variations in the surviving evidence and the intellectual traditions that have grown up around it. The contributors describe the types of evidence available and demonstrate the need for clearer thought about the relationships between evidence and models in ancient economic history, laying the foundations for a new comparative account of economic structures and growth in the ancient Mediterranean world.

Innovation Accounting Dan Toma 2021-09-09 When a company is committed to growing through innovation - not just exploiting the existing business models - standard accounting documents offer

insufficient and, oftentimes irrelevant data. Innovation Accounting is a practical guide for these companies to help them measure and track innovation. Most established organizations have understood the need to innovate and become more digital, however the management tools available to leaders seeking to understand the investments in innovation are lacking. Financial accounting in particular is difficult to use in the context of (digital) innovation. Therefore a new complementary system for measuring and tracking innovation is needed. The book provides tools, frameworks, templates, and visualizations that can be easily understood and applied. These can all be used by executives looking for a new way of measuring corporate performance in a world where accounting-recognized assets are becoming commodities, by investors seeking better ways of looking at a company's growth potential, and by managers who need to value innovation product teams using more than just financial indicators. Innovation Accounting is an essential go-to book for anyone that wants to measure their company's innovation ecosystem.

Comparative Law Uwe Kischel 2019-02-21 Uwe Kischel's comprehensive treatise on comparative law offers a critical introduction to the central tenets of comparative legal scholarship. The first part of the book is dedicated to general aspects of comparative law. The controversial question of methods, in particular, is addressed by explaining and discussing different approaches, and by developing a contextual approach that seeks to engage with real-world issues and takes a practical perspective on contemporary comparative legal scholarship. The second part of the book offers a detailed treatment of the major legal contexts across the globe, including common law, civil law systems (based on Germany and France, and extended to Eastern Europe, Scandinavia, and Latin America, among others), the African context (with an emphasis on customary law), different contexts in Asia, Islamic law and law in Islamic countries (plus a brief treatment of Jewish law and canon law), and transnational contexts (public international law, European Union law, and lex mercatoria). The book offers a coherent treatment of global legal systems that aims not only to describe their varying norms and legal institutions but to propose a better way of seeking to understand how the overall context of legal systems influences legal thinking and legal practice.
