Postal Two-way Communication in Correspondence Education John A. Bååth 1980 A review of the research on correspondence education with emphasis on its two-way communication aspects introduces this report on a series of studies designed to shed light upon problems related to the design and delivery of correspondence instruction. A total of 1,805 adult students enrolled in regular Swedish, Norwegian, and British correspondence courses of a secondary school or vocational training type were randomly assigned to experimental groups with (1) varying "submission density" (equivalent to varying length of study units); (2) varying numbers of assignment questions (omitted questions being replaced by self-check exercises); and (3) traditional postal instruction versus computer-assisted postal instruction. Data were collected through questionnaires, final tests, and a special student register. Results in the third series of experiments showed that the computerized postal instruction was experienced as more positive by the students than the traditional one. Students receiving computer-assisted correspondence tutoring started submitting more assignments than students receiving traditional tutoring by mail. In one of the two experimental courses, they also completed their studies more fully and more rapidly. Examples of postal two-way communication, computer-generated comment letters, and additional tables are appended, and a 13-page reference list is provided. (Author/LMM)

The IEEE Guide to Writing in the Engineering and Technical Fields David Kmiec 2017-09-25 Helps both engineers and students improve their writing skills by learning to analyze target audience, tone, and purpose in order to effectively write technical documents This book introduces students and practicing engineers to all the components of writing in the workplace. It teaches readers how considerations of audience and purpose govern the structure of their documents within particular work settings. The IEEE Guide to Writing in the Engineering and Technical Fields is broken up into two sections: “Writing in Engineering Organizations” and “What Can You Do With Writing?” The first section helps readers approach their writing in a logical and persuasive way as well as analyze their purpose for writing. The second section demonstrates how to distinguish rhetorical situations and the generic forms to inform, train, persuade, and collaborate. The emergence of the global workplace has brought with it an increasingly important role for effective technical communication. Engineers more often need to work in cross-functional teams with people in different disciplines, in different countries, and in different parts of the world. Engineers must know how to communication in a rapidly evolving global environment, as both practitioners of global English and developers of technical documents. Effective communication is critical in these settings. The IEEE Guide to Writing in the Engineering and Technical Fields Addresses the increasing demand for technical writing courses geared toward engineers Allows readers to perfect their writing skills in order to present knowledge and ideas to clients, government, and general public Covers topics most important to the working engineer, and includes sample documents Includes a companion website that offers engineering documents based on real projects The IEEE Guide to Engineering Communication is a handbook developed specifically for engineers and engineering students. Using an argumentation framework, the handbook presents information about forms of engineering communication in a clear and accessible format. This book introduces both forms that are characteristic

of the engineering workplace and principles of logic and rhetoric that underlie these forms. As a result, students and practicing engineers can improve their writing in any situation they encounter, because they can use these principles to analyze audience, purpose, tone, and form.

Samuel Stouffer and the GI Survey Joseph W. Ryan 2013-11-01 Samuel Stouffer, a little-known sociologist from Sac City, Iowa, is likely not a name World War II historians associate with other stalwart men of the war, such as Eisenhower, Patton, or MacArthur. Yet Stouffer, in his role as head of the Army Information and Education Division's Research Branch, spearheaded an effort to understand the citizen-soldier, his reasons for fighting, and his overall Army experience. Using empirical methods of inquiry to transform general assumptions about leadership and soldiering into a sociological understanding of a draftee Army, Stouffer perhaps did more for the everyday soldier than any general officer could have hoped to accomplish. Stouffer and his colleagues surveyed more than a half-million American GIs during World War II, asking questions about everything from promotions and rations to combat motivation and beliefs about the enemy. Soldiers' answers often demonstrated that their opinions differed greatly from what their senior leaders thought soldier opinions were, or should be. Stouffer and his team of sociologists published monthly reports entitled "What the Soldier Thinks," and after the war compiled the Research Branch's exhaustive data into an indispensable study popularly referred to as *The American Soldier*. General George C. Marshall was one of the first to recognize the value of Stouffer's work, referring to *The American Soldier* as "the first quantitative studies of the . . . mental and emotional life of the soldier." Marshall also recognized the considerable value of *The American Soldier* beyond the military. Stouffer's wartime work influenced multiple facets of policy, including demobilization and the GI Bill. Post-war, Stouffer's techniques in survey research set the state of the art in the civilian world as well. Both a biography of Samuel Stouffer and a study of the Research Branch, *Samuel Stouffer and the GI Survey* illuminates the role that sociology played in understanding the American draftee Army of the Second World War. Joseph W. Ryan tracks Stouffer's career as he guided the Army leadership toward a more accurate knowledge of their citizen soldiers, while simultaneously establishing the parameters of modern survey research. David R. Segal's introduction places Stouffer among the elite sociologists of his day and discusses his lasting impact on the field. Stouffer and his team changed how Americans think about war and how citizen-soldiers were treated during wartime. *Samuel Stouffer and the GI Survey* brings a contemporary perspective to these significant contributions.
