Spatial Information Technology for Sustainable Development Goals Dilip Kumar 2019-08-08 This textbook aims to develop a scientific knowledge base on spatial

information technology to communicate the United Nations' Sustainable Development Goals (SDGs) among students, researchers, professionals and laymen. The book improves understanding of the spatial database and explains how to extract information from this for planning purposes. To enhance the knowledge of geoscientists and environmentalists, the book describes the basic fundamental concepts to advance techniques for spatial data management and analysis and discusses the methodology. The Geographic Information System (GIS), remote sensing and Global Positioning System (GPS) are presented in an integrated manner for the planning of resources and infrastructure. The management of these systems is discussed in a very lucid way to develop the reader's skills. The proper procedure for map making and spatial analysis are included along with case studies to the reader. Where the first part of the book discusses the conceptual background, the second part deals with case studies using these applications in different disciplines. The presented case studies include land use, agriculture, flood, watershed characterization and infrastructure assessment for the Sustainable Development Goals.

Lead Market India Cornelius Herstatt 2016-11-26 India is still perceived by some as a developing country that has yet to create world-class products of its own. However, this book shows that in recent years India has emerged as a lead market for frugality-driven innovations that are affordable, robust and successful even outside its geographic boundaries. Many global companies have recognized these changes and are ramping up their local R&D capabilities. At the same time, several Indian firms are venturing out to international shores and gaining access to new markets. Using a top-down approach, the book takes a closer look at systems of innovation at work and presents examples of successful, corporate innovations in multiple industries and their contextual conditions.

Headquarters and Subsidiaries in Multinational Corporations S. Johnston 2005-07-31 In the global business environment, new organizational forms come and go but in today's multinational corporations the headquarters-subsidiary link remains the primary channel by which the firm is managed. It facilitates strategy, control and coordination, and smoothes the progress of inter-unit product, personnel, factor and knowledge flows of every kind. Using data from CEOs of a large sample of Australian subsidiaries of foreign firms, this book brings new insights into the nature of this vital corporate relationship.

Multinationals and Cross-Cultural Management Parissa Haghirian 2010-11-12

Globalisation makes our world appear smaller: it is easier to connect, communicate and do business with people all over the world. But cultural differences remain and challenge globalized knowledge communication and transfer. This book examines cross-cultural management within multinational enterprises (MNEs), focusing in particular on how cultural differences influence the transfer of knowledge between different units within individual corporations. Based on detailed empirical analysis of 267 companies in Germany

and Japan, it considers the relative effectiveness of inter-cultural and intra-cultural knowledge transfer; identifies the factors that inhibit or facilitate successful knowledge transfer; and suggests how management processes of MNEs can be improved. It demonstrates that although cultural differences do not necessarily influence the selection and transmission of knowledge overseas, they do have a strong impact on how that knowledge is received, integrated and put into practice locally. The book shows how knowledge is accepted differently in Europe and Asia and which factors have the strongest impact on efficient knowledge transfer. It suggests that to improve cross-cultural management MNEs should focus less on upgrading the technology that allows knowledge transfer, and more on the capabilities and beliefs of individual employees.

Global Information Systems Dorothy E Leidner 2008-09-10 Information technology has had a major impact on individuals, organizations and society over the past 50 years. There are few organizations that can afford to ignore IT and few individuals who would prefer to be without it. As managerial tasks become more complex, so the nature of the required information systems (IS) changes - from structured, routine support to ad hoc, complex enquiries at the highest levels of management. Global Information Systems aims to present the many complex and

inter-related issues associated with culture in the management of information systems. The editors have selected a wide range of contemporary articles from leading experts in North America and Europe that represent a wide variety of different national and cultural environments. They offer valid explanations for, rather than simply pointing out cultural differences in articles that cover a variety of national cultures, including: China, Egypt, Finland, Hong Kong, Hungary, India, Jamaica, Peru South Korea, Kuwait, Mexico, Singapore, Sweden, the United Arab Emirate, the UK, and the US.
