COMPUTER CONCEPTS AND MANAGEMENT INFORMATION SYSTEMS DAVENDRANATH G. JHA
2013-01-09 The book, in its second edition, precisely addresses the need of management students to acquaint with the basic concepts of computers, information technology and information system. The book provides readers with information pertaining to database concepts, networking essentials, web concepts and phases of system development life cycle. The business processes such as Enterprise Resource Planning, Customer Relationship Management and in e-Commerce are also introduced in the second edition. Thus the book can be regarded as one-stop compact teaching-reading resource for getting started with topics relevant to development of IT solutions. Key Features • The text is lecture based, which makes the teaching of the subject easier. • Comprehensive coverage of all important topics for clear understanding of the subject. • Chapter-end review questions to help students test their own knowledge of the subject matter. • Chapter-end summary for quick recapitulation of concepts before examination or moving to the next chapter. • Tables, figures and illustrations enhance concept apprehension.

ENTERPRISE RESOURCE PLANNING VINOD KUMAR GARG 2003-01-01 Enterprise Resource Planning (ERP), one of the fastest growing segments in Information Technology today, enables organizations to respond quickly to the ever increasing customer

needs and to capitalize on market opportunities. This revised edition continues to throw light on the significance of Business Engineering and its link with Information Technology. Besides, it discusses the role of consultants, vendors and users, the process of customization, as well as the methodology and guidelines for ERP implementation. Intended for the discerning chief executives, functional managers, MIS managers and students of management courses, the book should also serve as a complete reference for understanding the concepts of ERP and enable organizations to implement ERP solutions. HIGHLIGHTS OF THE SECOND EDITION Focusses on Indian ERP packages, with a new section on "Example of an Indian ERP Package". Provides Answers at the end of the book to most of the problems given at the end of each chapter for the benefit of both the students and the teachers.

PRINCIPLES OF MANAGEMENT AND ADMINISTRATION D. CHANDRA BOSE 2012-03-09 This book, now in its second edition, continues to provide a thorough treatment of the principles of management and administration. The contents of this book in this edition have been enhanced to serve the expanding needs of management students. Divided into eleven parts, this book in Part I (Introduction) provides an overview of the key concepts of management. In Part II (Planning) and in Part III (Organising and Staffing), the emphasis has been laid on the traditional functions of management. Similarly, Part IV (Direction and Controlling) and Part V (Management in Future) of this book outline the key futuristic thoughts. As the book advances to Part VI (Personnel Management) and Part VII (Financial Management), it explains the best practices and steps to their implementation its potential benefits and pitfalls. Part VIII (Production Management) deals with the organisational functions. Part IX (Marketing Management) and Part X (Management Information System) of this book discuss the role played by the information system in an organisation. Finally, in Part XI (Project Management), it describes the meaning, life cycles and the method of preparing a project in an organisation. Designed for the students of B.Com (Pass and Hons.) and BBA courses, this book will also be valuable to all those who are studying for professional qualifications such as MBA, CA, ICWA and CS. NEW TO THIS EDITION □ Includes three new parts—Part VIII (Production

Management); Part X (Management Information System) and Part XI (Project Management) □ Contains two new chapters, Organisational Culture and Group Dynamics (Chapter 11) and Career Strategy and Career Development (Chapter 23). □ Incorporates new sections in several chapters to broaden the coverage.

Organizing Information Dagobert Soergel 1985-09-26 This book gives a theoretical base and a perspective for the analysis, design, and operation of information systems, particularly their information storage and retrieval (ISAR) component, whether mechanized or manual. Information systems deal with many types of entities: events, persons, documents, business transactions, museum objects, research projects, and technical parts, to name a few. Among the purposes they serve are to inform the public, to support managers, researchers, and engineers, and to provide a knowledge base for an artificial intelligence program. The principles discussed in this book apply to all these contexts. The book achieves this generality by drawing on ideas from two conceptually overlapping areas—data base management and the organization and use of knowledge in libraries—and by integrating these ideas into a coherent framework. The principles discussed apply to the design of new systems and, more importantly, to the analysis of existing systems in order to exploit their capabilities better, to circumvent their shortcomings, and to introduce modifications where feasible.

Information Systems Julius T. Tou 2012-12-06 Ten years ago the first International Symposium on Computer and Information Sciences (COINS-63) was held at Northwestern University. Since that time, computer and information sciences have witnessed a great intensification of research and education. The activities in this field have been significantly broadened and enriched. During this ten-year period, we have organized four COINS symposia to provide a forum for promoting communication among scientists, engineers, and educators in the computer and information science field and to act as a catalyzer for stimulating creative thinking within the community of information processing. The COINS-72 symposium, which took place in Miami Beach on December 14-16, 1972, under the cosponsorship of the U.S. Army Research Office, the Atomic Energy Commission, and the University of Florida, is the fourth International

Symposium on Computer and Information Sciences. The theme of this COINS symposium is information systems. This theme has been selected for the following reasons: Information systems have offered widespread applications in education, government, industry, and science. The bulk of research in computer and information science is now geared to the development of improved information systems. A major portion of software engineering is concerned with computer software and sophisticated information system design. It seems logical that a symposium on information systems should follow the preceding software engineering conference.

Disaggregation L.P. Ritzman 2013-03-09 This volume is intended to expand the dialogue and interest among both practitioners and academicians in a problem area worthy of attention by all. The concept of disaggregation admits to our current inability to solve many types of interrelated hierarchical problems simultaneously. It offers instead a sequential, iterative process as a workable and necessary procedure. The papers in this volume are selected from those presented at a Disaggregation Conference held in March, 1977 at The Ohio State University. We heartily applaud all those who participated in the conference and particularly appreciate the cooperation of those authors whose work is published in this collection. Part A contains four papers which define the various dimensions of disaggregation. The paper by Martin Starr, which was the text of his luncheon address at the conference, provides several interesting perspectives to the problem. Although disaggregation suggests tearing apart, as Professor Starr illustrates with his butterfly example, it also suggests a putting together or a synthesis which recognizes interrelationships and dependencies. The next paper by Lee Kra jewski and Larry Ritzman offers a general model of disaggregation for both the manufacturing and service sectors. After reading the papers in this section, as well as the papers in subsequent sections, you will identify other dimensions to hierarchical decision making which go beyond this generalized model.

BUSINESS ANALYSIS PRADEEP HARI PENDSE 2015-07-01 The second edition of this book is a response to the fact that today BAs are expected to not merely help in gathering requirement for software, but solve real-world business problems, act as design thinkers and innovators, architects, drive process, and business transformation, and become 'trusted advisors' to managements—while leveraging their core strength in Information Technology. If the earlier edition was the first book on the subject—this edition takes the subject to the next level by preparing a BA to become a design thinker! An architect/design thinker usually views any problem from multiple perspectives. This edition, has therefore, been structured such that most of the chapters represent a distinct view-point about a problem space, business area or a process. Divided into five sections, the book delves onto three important aspects of Business Analysis—Processes, Information and Systems. The external enterprise context, competitiveness and strategy; internal enterprise context; flow perspective; information perspective; decision/business rules perspective; dynamic perspective; innovation and human perspective and technology perspective are some of the key view-points described in the chapters. Each of these perspectives are covered by way of conceptual framework, real-life illustrations and practical tips for a BA. With the help of a comprehensive cases, this edition guides the BA to synthesize these discrete perspectives, and propose meaningful solutions to the organization. In doing this, the book also explains the core artifacts which a BA produces, viz. Requirements Documents, Estimation and Business Cases. The book is designed for the aspiring Business Analysts and IT Managers/CIOs. Besides, the book will be equally beneficial for the students opting for the courses on MIS, Systems Analysis and Design, MBA, MCA and Business Process Analysis.
