Leprosy Enrico Nunzi 2012-04-27 Leprosy (Hansen's disease) is an infectious disease caused by *Mycobacterium leprae*. It is one of the most disabling disorders in developing countries, with a peak incidence in the tropics and subtropics. With globalization, leprosy is now increasingly spreading to the western world. The impact of this infectious disorder is relevant for the human community due to its transmissible nature, and also important for the individual because of its debilitating consequences. Leprosy is a multifaceted systemic disease with variable presentation and clinical picture. Its identification may therefore not be straightforward, especially outside endemic areas. During its chronic course, leprosy is characterized by acute phases during which there may be exacerbation of symptoms and rapid progression of damage. When leprosy affects the eyes, nerves, and kidneys, it can represent a true medical emergency. The aim of this book is to make the reader familiar with the characteristic signs of disease, including abnormalities of the skin, nerves, eyes, hands, feet, testes, and bone. Early identification of the disease is critical to prevent patient disability and establish appropriate therapy. Emphasis will be given to the current diagnostic tools to identify and quantify the organ damage, including electrophysiology, ultrasonography, magnetic resonance imaging, laboratory tests, and histopathology. Specific topics such as leprosy and pregnancy, leprosy and HIV infection, epidemiology, and leprosy control will also be covered.

Toxocara Celia Holland 2006 Toxocara is a parasitic helminth worm which

continues to stimulate both public concern and scientific interest. *Toxocara canis* and *T.cati*, the most studied species, are gastrointestinal parasites of dogs and cats and their eggs can contaminate the environment, thus exposing humans and other mammals and birds to infection. Many questions remain unanswered about the host-parasite relationship, its epidemiology and public health significance. Veterinarians and clinicians are interested in its importance as a zoonosis. The parasite's capacity to cause ocular disease is of concern to ophthalmologists, while its propensity to stimulate allergic manifestations is of interest to allergologists, dermatologists and respiratory medicine specialists. Furthermore *Toxocara* provides a unique model system to explore questions in parasite biology. This book provides a comprehensive review of *Toxocara* and the disease it causes known as toxocariasis.

Tumours of the Hand Julien Glicenstein 2012-12-06 Tumours of the hand are highly varied, their only common feature being their location in an organ in which preservation of sensation and mobility must be our primary concern. Although the subject of numerous studies, they are not well known to the majority of practitioners, as most of these studies deal with only one type of tumour. Now, however, we have a book devoted entirely to these tumours as a whole, with a clear and logical approach to the clinical features, histology, differential diagnosis and treatment of each type, together with an extensive bibliography. The need for such a work - one I believe to be unique of its kind - has long been felt, for tumours of the hand often raise difficult problems of diagnosis, prognosis and treatment. As regards differential diagnosis, this book is plainly very useful; it can be consulted like a classification. In recent years, diagnosis has been improved by new methods of investigation, such as thermography, scintigraphy, arteriography and serial angiography, etc. Though very expensive, the use of these sophisticated techniques sometimes proves valuable for the diagnosis of certain bony or vascular tumours that would otherwise be difficult to approach. Such methods should not be overused; when the lesion is easily accessible, biopsy is the correct procedure. In every case, biopsy provides the only certain method of diagnosis, even though histological interpretation may be difficult and calls for great experience; the penalties of error can be very serious.
