The Montefeltro Conspiracy Marcello Simonetta 2008-06-03 A brutal murder, a nefarious plot, a coded letter. After five hundred years, the most notorious mystery of the Renaissance is finally solved. The Italian Renaissance is remembered as much for intrigue as it is for art, with papal politics and infighting among Italy's many city-states providing the grist for Machiavelli's classic work on take-no-prisoners politics, *The Prince*. The attempted assassination of the Medici brothers in the Duomo in Florence in 1478 is one of the best-known examples of the machinations endemic to the age. While the assailants were the Medici's rivals, the Pazzi family, questions have always lingered about who really orchestrated the attack, which has come to be known as the Pazzi Conspiracy. More than five hundred years later, Marcello Simonetta, working in a private archive in Italy, stumbled upon a coded letter written by Federico da Montefeltro, the Duke of Urbino, to Pope Sixtus IV. Using a codebook written by his own ancestor to crack its secrets, Simonetta unearthed proof of an all-out power grab by the Pope for control of Florence. Montefeltro, long believed to be a close friend of Lorenzo de Medici, was in

fact conspiring with the Pope to unseat the Medici and put the more malleable Pazzi in their place. In *The Montefeltro Conspiracy*, Simonetta unravels this plot, showing not only how the plot came together but how its failure (only one of the Medici brothers, Giuliano, was killed; Lorenzo survived) changed the course of Italian and papal history for generations. In the course of his gripping narrative, we encounter the period's most colorful characters, relive its tumultuous politics, and discover that two famous paintings, including one in the Sistine Chapel, contain the Medici's astounding revenge.

The Book of Eels Tom Fort 2003 What has been the dish of kings, the subject of myths and the traveller of epic and mysterious journeys? The eel. Beginning life in the Sargasso Sea, the eel travels across the ocean, lives for twenty or so years, and then is driven by some instinct back across the ocean to spawn and die. And the next generation starts the story again. No one knows why the eels return, or how the orphaned elvers learn their way back. One man discovered, after many adventures, the breeding ground of all eels - and he is the hero of this book. Eels were being caught and consumed 5000 years before the birth of Christ - Aristotle and Pliny wrote about them; Romans regarded them as a peerless delicacy; Egyptians accorded them semi-sacred status; English kings died of overeating them. There are many strange practices among eel fishers all over the world, and many great fortunes based upon the eel harvest. *The Book of Eels*, a combination of social comment, biography and natural history, is also a fascinating and witty account of Tom Fort's obsession with the eel, his journeying to discover the eel in all its habitats, and the people he meets in his pursuit.

Houses by the Sea 2006 Le charme propre à l'horizon de la mer se révèle irrésistible pour ceux qui aspirent à faire de ce regard sur l'infini l'une des fenêtres de leur demeure. Pour autant, les maisons construites sur des terrains côtiers supposent souvent un défi à la solution complexe pour les architectes. Maisons en bord de mer présente un ensemble de projets qui, loin de se réduire à un langage architectural élémentaire, font preuve d'une grande créativité, ouvrant un éventail de possibilités aussi vaste que le lieu qui les accueille.

recollections highlight the indefinable moments when lines are crossed and a woman must ask herself if the only way to avoid being objectified is to simply cease to draw any attention to her physical being. She delves into the gray space that lives between consent and assault and tenderly explores the complexity of the shame, guilt, vulnerability, and responsibility attached to both.

Simple Fishing With Bread: The Secret? Experience! Lelio Zeloni 2019-03-24 One day, while Lelio was fishing on the Livornese coasts, many fishermen who were next to him to observe him asked him: "But how can you take all those fish, if

we have not even seen the float move?". This answer, and many others answers are written in this book, so that everyone can have fun and spend pleasant hours fishing. "The principle states that about 20% of causes create 80% of effects. So, 80% of what we get is caused by only 20% of what we do. In every field or sector, most of the effects are caused by a limited number of causes. So, you will notice with great surprise that 80% of the world's wealth is held by 20% of the population, 80% of a company's earnings are generated by 20% of the sales, 80% of your results are generated by 20% of your actions. This principle is present in many areas of our life. Even fishing is not immune to this principle. This book perfectly embodies the principle of Pareto. These pages, that are written in a very simple way, are very effective, they are the essence of experience that will teach you that 20% will give you 80% of the value, leaving out all that is irrelevant and unnecessary for successful fishing." Dr. Edoardo Zeloni Magelli This easy to learn book wants to be a useful guide both for those who want to start fishing with bread, and for the more experienced fishermen who want to improve their fishing skills. In these pages you will find very practical tips on how to fish with bread, you will find advice on the various types of floats and the best ones to use, both in calm and rough seas, and on the length of the rods to use which will depend on where we choose to go fishing. I will teach you how to recognize the suitable places for fishing, teaching you how to use your logic, but above all, you will understand when it is time to go fishing by observing the tides.

Ships and Science Larrie D. Ferreiro 2010-01-22 The first book to portray the birth of naval architecture as an integral part of the Scientific Revolution, examining its development and application across the major shipbuilding nations of Europe. "Naval architecture was born in the mountains of Peru, in the mind of a French astronomer named Pierre Bouguer who never built a ship in his life." So writes Larrie Ferreiro at the beginning of this pioneering work on the science of naval architecture. Bouguer's monumental book *Traité du navire* (Treatise of the Ship) founded a discipline that defined not the rules for building a ship but the theories and tools to predict a ship's characteristics and performance before it was built. In *Ships and Science*, Ferreiro argues that the birth of naval architecture formed an integral part of the Scientific Revolution. Using Bouguer's work as a cornerstone, Ferreiro traces the intriguing and often unexpected development of this new discipline and describes its practical application to ship design in the seventeenth and eighteenth centuries. Drawing on previously untapped primary-source and archival information, he places the development of naval architecture in the contexts of science, navy, and society, across the major shipbuilding nations of Britain, France, Spain, the Netherlands, Sweden, Denmark, and Italy. Ferreiro describes the formulation of the three major elements of ship theory (the science of explaining the physical behavior of a ship): maneuvering and sail theory, ship resistance and hydrodynamics, and stability theory. He considers the era's influential books on naval architecture and describes the professionalization of ship constructors that is the true legacy of this period. Finally, looking from the viewpoints of both the constructor and the naval administrator, he explains why the development of ship theory was

encouraged, financed, and used in naval shipbuilding. A generous selection of rarely seen archival images accompanies the text.

The Dead Fish Museum Charles D'Ambrosio 2006-04-18 "In the fall, I went for walks and brought home bones. The best bones weren't on trails—deer and moose don't die conveniently—and soon I was wandering so far into the woods that I needed a map and compass to find my way home. When winter came and snow blew into the mountains, burying the bones, I continued to spend my days and often my nights in the woods. I vaguely understood that I was doing this because I could no longer think; I found relief in walking up hills. When the night temperatures dropped below zero, I felt visited by necessity, a baseline purpose, and I walked for miles, my only objective to remain upright, keep moving, preserve warmth. When I was lost, I told myself stories . . ." So Charles D'Ambrosio recounted his life in Philipsburg, Montana, the genesis of the brilliant stories collected here, six of which originally appeared in *The New Yorker*. Each of these eight burnished, terrifying, masterfully crafted stories is set against a landscape that is both deeply American and

unmistakably universal. A son confronts his father's madness and his own hunger for connection on a misguided hike in the Pacific Northwest. A screenwriter fights for his sanity in the bleak corridors of a Manhattan psych ward while lusting after a ballerina who sets herself ablaze. A Thanksgiving hunting trip in Northern Michigan becomes the scene of a haunting reckoning with marital infidelity and desperation. And in the magnificent title story, carpenters building sets for a porn movie drift dreamily beneath a surface of sexual tension toward a racial violence they will never fully comprehend. Taking place in remote cabins, asylums, Indian reservations, the backroads of Iowa and the streets of Seattle, this collection of stories, as muscular and challenging as the best novels, is about people who have been orphaned, who have lost connection, and who have exhausted the ability to generate meaning in their lives. Yet in the midst of lacerating difficulty, the sensibility at work in these fictions boldly insists on the enduring power of love. D'Ambrosio conjures a world that is fearfully inhospitable, darkly humorous, and touched by glory; here are characters, tested by every kind of failure, who struggle to remain human, whose lives have been sharpened rather than numbed by adversity, whose apprehension of truth and beauty has been deepened rather than defeated by their troubles. Many writers speak of the abyss. Charles D'Ambrosio writes as if he is inside of it, gazing upward, and the gaze itself is redemptive, a great yearning ache, poignant and wondrous, equal parts grit and grace. A must read for everyone who cares about literary writing, *The Dead Fish Museum* belongs on the same shelf with the best American short fiction.

A Jerk on One End Robert Hughes 2000-07-01 'In some ways it's a ridiculous human passion, ' Robert Hughes writes of fishing but, for him, it has been a lifelong obsession and the pastime that he loves best. In *A Jerk on One End* he brings the wit and insight that have characterised his art criticism and his other writings to bear on the subjects of fish and fishing. He traces his love of fishing to his boyhood on Sydney Harbour and recounts the high and low points of his career with rod and reel, from his first catch to the hair-raising tales of shark hunts he has picked up from other fishermen. Mixing memoir and history with folklore and anecdote, he has produced a book that is a celebration of the delights and beauties of fishing and, in its final pages, a powerful and reasoned plea for the protection of the ecology of the ocean.

Beach Nourishment and Protection Division on Engineering and Physical Sciences 1996-01-12 Many coastal communities have built structures at their beaches and added quantities of sand in contoured designs to combat erosion. Are such beach nourishment projects technically and economically sound? Or are they nothing more than building sand castles, as critics claim? Beach Nourishment and Protection provides a sound technical basis for decisionmaking, with recommendations regarding the utility of beach nourishment, the appropriate role of federal agencies, responsibility for cost, design methodology, and other issues. This volume Examines the economic and social role of beaches, the history of beach nourishment projects, and management strategies for shore protection. Discusses the role of the U.S. Army Corps of Engineers and other federal agencies, with a close-up look at the federal flood insurance program. Explores the state of the art in project design and prediction of outcomes, including the controversy over the use of traditional and nontraditional shore protection devices. Addresses what is known about the environmental impacts of beach nourishment. Identifies what outcomes should be targeted for continued monitoring by project officials. Beach Nourishment and Protection provides insight into the technical, economic, environmental, and policy implications of beach nourishment and protection, with examples and suggested research directions.

The Book of Whispers Varujan Vosganian 2017-01-01 A harrowing account of the Armenian Genocide documented through the stories of those who managed to survive and descendants who refuse to forget The grandchild of Armenians who escaped widespread massacres during the Ottoman Empire a century ago, Varujan Vosganian grew up in Romania hearing firsthand accounts of those who had witnessed horrific killings, burned villages, and massive deportations. In this moving chronicle of the Armenian people's almost unimaginable tragedy, the author transforms true events into a work of fiction firmly grounded in survivor testimonies and historical documentation. Across Syrian desert refugee camps, Russian tundra, and Romanian villages, the book chronicles individual lives destroyed by ideological and authoritarian oppression. But this novel tells an even wider human story. Evocative of all the great sufferings that afflicted the twentieth century--world wars, concentration camps, common graves, statelessness, and others--this book belongs to all peoples whose voices have been lost. Hailed for its documentary value and sensitive authenticity, Vosganian's work has become an international phenomenon.

Principles of Mathematics for Economics Simone Cerreia-Vioglio 2018-10-01 This textbook provides a comprehensive and rigorous introduction to various mathematical topics that play a key role in economics and finance. Motivated by economic applications, the authors introduce students to key mathematical ideas through an economic viewpoint, starting from the real line and moving to n-dimensional spaces, with a special emphasis on global optimization.

Carp Fishing Science Jon Woods 2010-01 Carp anglers talk about watercraft all the time. But what exactly is that? Some would say it's applying understanding of the environment in which the carp lives and the fish itself to catch more of them. And how do we improve our watercraft? By studying how the behaviour of the carp changes as environmental variables fluctuate daily and seasonally. We can do this by spending time on the lake or river bank and by reading about it. *Carp Fishing Science* is unlike all other carp fishing books. It provides information which the angler can use in order to anticipate changes in the carp's behaviour, especially those related to nutrition and activity, therefore helping to improve the reader's watercraft. Jon Wood, marine biologist and experienced fish farm consultant, has written a book which looks at carp fishing from a very different point of view from all other publications; from that of the fish rather than the fisherman, which is really where it should be from. In *Carp Fishing Science*, he presents a distillation of more than two hundred scientific publications and has extracted the most valuable proven facts about the fish to allow the reader to know the animal in greater detail, modify strategies and put more fish on the bank. This book bridges a gap between that which has until now only been supposed and that which has been shown through scientific studies. The author delves into aspects of carp biology, fish physiology and environmental science in order to clarify some of the myths surrounding carp fishing and answers questions such as why and how carp feed, which substances have been shown to cause a positive feeding response to carp, how the fish uses each of its senses and how the nutritional requirements of the carp change through the year. If you are a carp angler, a carp producer, a bait maker, a fisheries student, or just someone who has always wanted to think like a fish, then this book should be in your collection.

Until Harry L. A. Casey 2016-07-19 Coming home is hard for Lane. Hard because her beloved uncle Harry has died suddenly, but also because of him. Kale. Kale Hunt has been her best friend since childhood. But it was never that simple. He was Lane's reason for leaving home and moving to New York. Seeing him with someone else, in love with someone else, shouldn't have hurt. But it did. It really, really did. So she upped sticks and left, started a new life and cut

herself off from her past. But now she's back and all the feelings are right there. As if she had never left. Emotions are running high, and tragedy has a funny way of bringing people together. But is Lane reading the signs right? Are they still just friends, or is there something more?
