Explore Earth's Seven Continents Bobbie Kalman 2010-08-15 This concise overview of the seven continents explains to children what a continent is and what factors make each continent unique. Full-color photographs and age-appropriate maps accompany each brief examination of a continent. Topics include

Continents of the World for Kids Nishi Singh 2016-01-07 Continents of the World for Kids: Geography for Kids: World Continents Do you want to teach your children about the continents of the world? If yes then this is the book for you! It's important that children appreciate the planet as the

home land of mankind so that they can take wise decisions when they grow older about how the planet's resources should be used. In this book, children will learn about the various continents of the world, about its people, their societies, economies, cultures and the environment. This book is more than just a factual look through. It is a book that will make children appreciate why each continent is important and why they should be preserved for as long as possible. With the increase in global warming and climate change that is currently affecting the world, the current state of the continents is subject to change as well. Soon Antarctica might not be a place that is considered to be icy and cold. If the ice caps keep melting then the continent of Antarctica may disappear all together and become flooded with water. But if children never had knowledge about Antarctica then they would never understand the significance of this change. That is why learning about the continents now is crucial. Let this book be their guide to the current state of the continents. Then in the next 30 years they can look back upon and see how much they've truly changed over the years.

Manual and Course of Study, Elementary Schools Michigan. Department of Public Instruction 1916

Map Skills Mary Rosenberg 2003-01-15 Too often map skills focus on memorizing country borders, names, and capitals. With our rapidly changing world, what is learned one year may become obsolete the next. Map Skills, Grade 6 has a more practical approach. It focuses on the natural geography of the world, why maps are made like they are, and how to use them to find your way around. Students will learn to understand map symbols such as the legend, scale, directional compass, and grids. They will learn to differentiate between physical, political, thematic, and direction maps and how each type is useful for different information. Political boundaries and country names may change, but the skills learned in this book will last a lifetime.

Spectrum Geography, Grade 3 2015-01-05 Winding through purple mountains majesties and amber waves of grain, the standards-based Spectrum Geography: Communities for grade 3 guides your child's understanding of landforms, oceans, rivers, communities, the environment, and more using colorful illustrations and informational text. Spectrum Geography is an engaging geography resource that goes

beyond land formations and maps—it opens up children’s perspectives through local, national, and global adventures without leaving their seats.

Hurry and the Monarch Antoine O Flatharta 2013-05-29 When the beautiful orange Monarch on her fall migration route from Canada to Mexico stops to rest at Wichita Falls, Texas, she makes friends with an old tortoise called Hurry. She tells him, "Maybe one day you'll break out of that shell, grow wings, and fly away," and then she is off again with millions of other Monarchs. In the spring, she stops again at Hurry's garden just long enough to lay her eggs and head north to Canada. Embedded in this lyrical and tender fictional presentation are the fascinating facts about the amazing 2,000-mile migration and the life cycle of butterflies. An afterword provides additional scientific data.

Elementary Geography Charlotte Mason 2016-06-01 This little book is confined to very simple “reading lessons upon the Form and Motions of the Earth, the Points of the Compass, the Meaning of a Map: Definitions.” The shape and motions of the earth are fundamental ideas—however difficult to grasp. Geography should be learned chiefly from maps, and the child should begin the study by learning “the meaning of map,” and how to use it. These subjects are well fitted to form an attractive introduction to the study of Geography: some of them should awaken the delightful interest which attaches in a child’s mind to that which is wonderful—incomprehensible. The Map lessons should lead to mechanical efforts, equally delightful. It is only when presented to the child for the first time in the form of stale knowledge and foregone conclusions that the facts taught in these lessons appear dry and repulsive to him. An effort is made in the following pages to treat the subject with the sort of sympathetic interest and freshness which attracts children to a new study. A short summary of the chief points in each reading lesson is given in the form of questions and answers. Easy verses, illustrative of the various subjects, are introduced, in order that the children may connect pleasant poetic fancies with the phenomena upon which “Geography” so much depends. It is hoped that these reading lessons may afford intelligent teaching, even in the hands of a young teacher. The first ideas of Geography—the lessons on “Place”—which should make the child observant of local geography, of the features of his own neighbourhood, its heights and hollows and level lands, its streams and ponds—should be conveyed viva voce. At this stage, a class-book cannot take the place of an intelligent teacher. Children should go through the book twice, and should, after the second reading, be able to answer any of the questions from memory. Charlotte M. Mason

Course of Study, Baltimore County, Maryland, Public Schools, Grades I-VIII Baltimore County (Md.). Board of school commissioners 1919
